<i>Preface</i>	<i>xi</i>
<i>Conference photo</i>	<i>xiv</i>
<i>Introduction</i>	<i>xv</i>
1 Independence and Lévy Processes in Quantum Probability	1
1.1 Introduction	1
1.2 What is Quantum Probability?	4
1.2.1 Distinguishing features of classical and quantum probability	11
1.2.2 Dictionary ‘Classical \leftrightarrow Quantum’	13
1.3 Why do we Need Quantum Probability?	15
1.3.1 Mermin’s version of the EPR experiment	15
1.3.2 Gleason’s theorem	20
1.3.3 The Kochen–Specker theorem	21
1.4 Infinite Divisibility in Classical Probability	23
1.4.1 Stochastic independence	23
1.4.2 Convolution	23
1.4.3 Infinite divisibility, continuous convolution semigroups, and Lévy processes	23
1.4.4 The De Finetti–Lévy–Khintchine formula on $(\mathbb{R}_+, +)$	25
1.4.5 Lévy–Khintchine formulae on cones	25
1.4.6 The Lévy–Khintchine formula on $(\mathbb{R}^d, +)$	26
1.4.7 The Markov semigroup of a Lévy process	27
1.4.8 Hunt’s formula	27
1.5 Lévy Processes on Involutive Bialgebras	29
1.5.1 Definition of Lévy processes on involutive bialgebras	29
1.5.2 The generating functional of a Lévy process	34
1.5.3 The Schürmann triple of a Lévy process	36
1.5.4 Examples	41
1.6 Lévy Processes on Compact Quantum Groups and their Markov Semigroups	42

Cambridge University Press

978-1-107-14805-5 - Noncommutative Mathematics for Quantum Systems

Uwe Franz and Adam Skalski

Table of Contents

[More information](#)

viii Contents

1.6.1	Compact quantum groups	43
1.6.2	Translation invariant Markov semigroups	48
1.7	Independences and Convolutions in Noncommutative Probability	55
1.7.1	Nevanlinna theory and Cauchy–Stieltjes transforms	55
1.7.2	Free convolutions	57
1.7.3	A useful Lemma	60
1.7.4	Monotone convolutions	60
1.7.5	Boolean convolutions	73
1.8	The Five Universal Independences	83
1.8.1	Algebraic probability spaces	87
1.8.2	Classical stochastic independence and the product of probability spaces	88
1.8.3	Products of algebraic probability spaces	90
1.8.4	Classification of the universal independences	94
1.9	Lévy Processes on Dual Groups	98
1.9.1	Dual groups	98
1.9.2	Definition of Lévy processes on dual groups	101
1.9.3	Time reversal	103
1.10	Open Problems	105
	References	107
2	Quantum Dynamical Systems from the Point of View of Noncommutative Mathematics	121
2.1	Noncommutative Mathematics and Quantum/Noncommutative dynamical systems	121
2.1.1	Noncommutative Mathematics – Gelfand–Naimark Theorem	122
2.1.2	Quantum topological dynamical systems and some properties of transformations of C^* -algebras	123
2.1.3	Cuntz algebras	126
2.1.4	Graph C^* -algebras	128
2.1.5	C^* -algebras associated with discrete groups	130
2.2	Noncommutative Topological Entropy of Voiculescu	131
2.2.1	Endomorphisms of Cuntz algebras and a quantum shift	132

Cambridge University Press

978-1-107-14805-5 - Noncommutative Mathematics for Quantum Systems

Uwe Franz and Adam Skalski

Table of Contents

[More information](#)

Contents ix

2.2.2	The shift transformation on a graph C^* -algebra	134
2.2.3	Classical topological entropy as defined by Rufus Bowen and extensions to topological pressure	134
2.2.4	Finite-dimensional approximations in the theory of C^* -algebras	136
2.2.5	Noncommutative topological entropy (Voiculescu topological entropy)	137
2.3	Voiculescu Entropy of the Shift and other Examples	141
2.3.1	Estimating the Voiculescu entropy of the permutative endomorphisms of Cuntz algebras	141
2.3.2	The Voiculescu entropy of the noncommutative shift and related questions	145
2.3.3	Generalizations to graph C^* -algebras and to noncommutative topological pressure	146
2.3.4	Automorphism whose Voiculescu entropy is genuinely noncommutative	147
2.3.5	Automorphism that leaves no non-trivial abelian subalgebras invariant	149
2.4	Crossed Products and the Entropy	152
2.4.1	Crossed products	152
2.4.2	The Voiculescu entropy computations for the maps extended to crossed products	154
2.5	Quantum 'Measurable' Dynamical Systems and Classical Ergodic Theorems	157
2.5.1	Measurable dynamical systems and individual ergodic theorem	157
2.5.2	GNS construction and the passage from topological to measurable noncommutative dynamical systems	158
2.6	Noncommutative Ergodic Theorem of Lance; Classical and Quantum Multi Recurrence	163
2.6.1	Mean ergodic theorem(s) in von Neumann algebras	163
2.6.2	Almost uniform convergence in von Neumann algebras	166
2.6.3	Lance's noncommutative individual ergodic theorem and some comments on its proof	167
2.6.4	Classical multirecurrence	168

Cambridge University Press
