Preface	<i>page xv</i>
Acknowledgments	xix
Basic Structure of the Book	xxi
How to Use This Book	xxiii
PART I: FOUNDATIONS OF PREFERENCE, VALUE, AND UTILITY	1
1 Preference, Value, and Utility	3
1.1 Characterizing Prospects of a Decision	3
1.2 Preference for a Deterministic Prospect	7
1.3 Value of a Deterministic Prospect	8
1.4 Utility of a Deterministic Prospect	10
1.5 Using Value Statements to Help with the Utility of a Deterministic Prospect	14
1.6 Summary	15
2 Foundations of Expected Utility	20
2.1 The Five Rules of Actional Thought: The Decision Calculator	20
2.2 Using the Five Rules with Multiattribute Prospects: The Same Rules Apply	26
2.3 Dealing with Uncertainty: Probability Assignment	29
2.4 Dealing with Both Uncertainty and Trade-Offs	30
2.5 Summary	30
3 Some Flawed Methods of Decision-Making	35
3.1 Introduction: Approximate vs. Fundamentally Flawed Methods of Decision-Making	35
3.2 Using Pairwise Comparisons of Prospects and the Method of Elimination	36
3.3 Majority Votes over the Individual Attributes	38
3.4 The Min-Max Regret Criterion	41
3.5 Summary	44

viii	Contents
PART II: MAKING DECISIONS WHEN THERE IS NO UNCERTAINTY	47
4 The Order Rule: Preference for Deterministic Prospects	49
4.1 Introduction	49
4.2 Ordering Prospects by Visualization	49
4.3 Summary	58
5 Getting the Attributes Right	61
5.1 Introduction	61
5.2 Direct vs. Indirect Values	62
5.3 Do Not Mix the Direct and Indirect Values in a Deterministic Objective Function	65
5.4 Using Meaningful and Measurable Attributes	69
5.5 Using Structural Models to Order Prospects (and to Characterize Direct Value Attributes)	73
5.6 Converting Meaningful and Measurable Attributes into Dollar Equivalents	76
5.7 Summary	78
6 Preferences for Prospects with a Single Direct Value Attribute	82
6.1 Introduction	82
6.2 Prospects Characterized by a Single Numeric Measure	83
6.3 Preference Functions Obtained by Thinking Qualitatively about Your Preferences	84
6.4 The Vertical Scale of the Preference Function	88
6.5 Effects of a Preference Function Applied to a Direct Value Attribute on Its Components in the Structural Model	90
6.6 Interpreting Preference Functions by Thinking about Changes in Preferences	91
6.7 A Note on the Types of Preference Functions That We Have Presented	93
6.8 Summary	94
7 Preferences for Prospects with Multiple Direct Value Attributes	97
7.1 Introduction	97
7.2 Basic Notation and Definitions	98
7.3 Isopreference Contours: The Added Complexity with Multiple Attributes	99
7.4 Constructing Preference Functions for Multiple Attributes	102
7.5 Assessment of Trade-Offs Using a Functional Form for the Isopreference Contours	105
7.6 Constructing Preference Functions by Capturing Important Features of the Problem	112
7.7 Constructing Preference Functions by Thinking about Changes in Preferences	120
7.8 Summary	120
8 Additive Preference Functions	126
8.1 Introduction	126
8.2 The Additive Preference Function	126
8.3 Verifying the Additive Form by Preference Switches: Preferential Independence	131

Contents	ix
8.4 Alternate Representation: Archimedean Combinations of Individual Functions	135
8.5 Elasticity of Substitution	139
8.6 Summary	149
9 Valuing Deterministic Prospects	161
9.1 Introduction: The Benefits of a Value Measure	161
9.2 Value Functions from Structural Models of Physics, Engineering, or Accounting Principles	162
9.3 Value Functions Obtained by Applying a Monotone Transformation to the Preference Function	167
9.4 Monotone Transformations of the Archimedean Preference Function: Archimedean Value Function	172
9.5 Incorporating Time Preference into the Valuation of Prospects	174
9.6 No Regrets	175
9.7 Summary	176
PART III: DECISIONS WITH UNCERTAINTY: UTILITY FUNCTIONS USING PREFERENCE OR VALUE FUNCTIONS	179
10 Single-Attribute Utility Functions	181
10.1 Introduction	181
10.2 Assessing Utility Functions over Value Measures	183
10.3 Determining the Functional Form of a Utility Function	189
10.4 Utility over Value versus Utility over an Attribute	190
10.5 Incorporating Time Preference	190
10.6 Summary	191
11 Multiattribute Utility Functions Using Preference or Value Functions	196
11.1 Introduction: The Good News	196
11.2 Constructing Multiattribute Utility Functions Using Preference Functions	197
11.3 Constructing Multiattribute Utility Functions Using Value Functions	200
11.4 Historical Document from Early Phases of Decision Analysis	205
11.5 Change of Variables in Utility Assignment	208
11.6 Important Remark	212
11.7 Summary	212
12 Utility Functions over Additive Preference or Value Functions	214
12.1 Introduction: What Is So Special about This Formulation?	214
12.2 Exponential Utility Functions over Value	216
12.3 Logarithmic Utility Functions over Value	219
12.4 Archimedean Combinations of Utility Functions: General Utility Functions over Additive Preference Functions	220
12.5 Assessing Multiattribute Utility Functions with Additive Ordinal Preferences Using Archimedean Combinations of Utility Functions	229
12.6 Summary	233

x	Contents
PART IV: PROPERTIES OF SINGLE-ATTRIBUTE UTILITY FUNCTIONS	239
13 The Role of the Utility Function in Valuing Uncertain Deals	241
13.1 Introduction	241
13.2 Basic Definitions and Notation	242
13.3 Assessing Utility Functions over Value Measures	243
13.4 Valuing a Decision Alternative Using the Utility Function (The Certain Equivalent)	245
13.5 Effects of the Shape of the Utility Function on the Certain Equivalent	252
13.6 Effects of Applying a Concave or Convex Transformation to the Utility Function	255
13.7 Effects of Incrementing All Lottery Outcomes by the Same Shift Amount	257
13.8 Summary	270
14 The Risk Aversion Function	272
14.1 Introduction	272
14.2 The Absolute Risk Aversion Function	273
14.3 Determining the Utility Function from the Absolute Risk Aversion Function	278
14.4 Applications of the Absolute Risk Aversion Function	280
14.5 When One Certain Equivalent Is Always Lower Than Another	285
14.6 The Inclination of the Risk Aversion Function (Increasing or Decreasing with Wealth)	286
14.7 Summary	288
15 Scale Transformations Applied to a Lottery	293
15.1 Introduction	293
15.2 The Multiplicative Delta Property	293
15.3 The Multiplicative Sub-Delta Property	297
15.4 The Multiplicative Super-Delta Property	299
15.5 The Relative Risk Aversion Function	301
15.6 Summary	306
16 The Invariant Transformation of a Utility Function	309
16.1 Introduction	309
16.2 The Invariant Transformation of a Utility Function	310
16.3 Determining the Invariant Transformation of a Utility Function	314
16.4 The g -Risk Aversion Function	321
16.5 Summary	323
17 Valuing Changes in Uncertain Deals (In the Small and in the Large)	327
17.1 Introduction	327
17.2 Problem Formulation: Bounds on the Wealth Equivalent	328
17.3 The Characteristic Transformation of a Utility Function, U , and a Transformation, g	329
17.4 Modifying Lotteries by Shift Transformations	333
17.5 A Measure of Change in Wealth Equivalent	335
17.6 Valuing Changes in the Small	338
17.7 Jensen's Inequality Gap for Small Variance	339
17.8 Summary	340

Contents	xi
18 One-Switch Utility Functions	347
18.1 Introduction	347
18.2 Relating the Delta Property to Zero-Switch Utility Functions	348
18.3 One-Switch Utility Functions	352
18.4 Additional Characterization of One-Switch Utility Functions	359
18.5 N-Switch Utility Functions	362
18.6 Extensions to Two Attributes	362
18.7 Summary	363
19 Utility Transversality	367
19.1 Introduction	367
19.2 Deriving the Conditional Utility Function at Different Levels	367
19.3 The Chain Rule for Risk Aversion	368
19.4 Utility Transversality	371
19.5 Implications of Utility Transversality	374
19.6 Summary	375
20 Multiattribute Risk Aversion	380
20.1 Introduction	380
20.2 The Sign of the Cross-Derivative of a Preference Function	380
20.3 The Sign of the Cross-Derivative of a Multiattribute Utility Function: Implications for Lotteries	381
20.4 Relating Two-Attribute Risk Aversion and Correlation Aversion	384
20.5 Relating Risk Aversion and Two-Attribute Risk Aversion	387
20.6 The Implications of Additive Utility Functions	392
20.7 Summary	395
PART V: MULTIATTRIBUTE UTILITY FUNCTIONS WITHOUT PREFERENCE OR VALUE FUNCTIONS	397
21 Attribute Dominance Utility Functions	401
21.1 Introduction	401
21.2 Properties of Attribute Dominance Utility Functions (Two Attributes)	402
21.3 Marginal-Conditional Expansion of Attribute Dominance Utility Functions	404
21.4 Trade-Offs Implied by Utility-Dominant Attributes	416
21.5 Attribute Dominance Utility Functions with Multiple Attributes	417
21.6 Attribute Dominance Utility Diagrams	418
21.7 Attribute Dominance Utility Copulas	423
21.8 Constructing Attribute Dominance Utility Functions with Various Independence Conditions	434
21.9 Summary	437
22 Basic Expansion Theorem for Two-Attribute Utility Functions	439
22.1 Relaxing the Attribute Dominance Conditions	439
22.2 Two-Attribute Utility Trees on a Continuous Domain	441
22.3 Utility Inference for Two Attributes	450
22.4 General Expression and Notation for Utility Inference	455

xii	Contents	
22.5	Reversing the Order of the Attributes in the Conditioning Statements	456
22.6	Summary	456
23	Basic Independence Conditions for Two Attributes	461
23.1	Introduction	461
23.2	Utility Independence (Keeney and Raiffa 1976)	462
23.3	Boundary Independence (Abbas 2011)	469
23.4	Interpolation Independence (Bell 1979)	471
23.5	Relating Utility, Boundary, and Interpolation Independence	471
23.6	Graphical Representations of Independence Relations	476
23.7	Summary	481
24	Basic Expansion Theorem for Multiattribute Utility Functions	483
24.1	Introduction	483
24.2	The Three-Attribute Utility Tree on a Continuous Domain	483
24.3	The Conditional Utility Function of the First Attribute in the Expansion	486
24.4	The Conditional Utility Function of the Second Attribute in the Expansion	488
24.5	The Conditional Utility Function of the Third Attribute in the Expansion	493
24.6	Extensions to Multiple Attributes	496
24.7	Reversing the Order of the Attributes in the Conditioning Statements	499
24.8	Utility Tree Networks for Three or More Attributes	499
24.9	Summary	501
25	Multiattribute Utility Functions with Partial Utility Independence	507
25.1	Introduction	507
25.2	Capturing Independence Relations Using Utility Trees	507
25.3	Bidirectional Utility Diagrams with Three or More Attributes	509
25.4	The Simplest Utility Diagram: A Diagram with No Arrows	510
25.5	Deriving the Functional Forms with Partial Utility Independence	514
25.6	Iteratively Determining the Utility Assessments Needed for Partial Independence	515
25.7	Summary	518
26	Higher-Order Independence Relations	521
26.1	Introduction	521
26.2	Higher-Order Utility Assessments	522
26.3	Higher-Order Utility Independence	523
26.4	Relating Higher-Order Utility Independence to Lower-Order Utility Independence	525
26.5	Additional Conditions to Assert Higher-Order Independence from Lower-Order Independence	529
26.6	When Every Subset of the Attributes Is Utility Independent of Its Complement	533
26.7	Summary	534
27	One-Switch Utility Independence	537
27.1	Introduction: Relating Three Different Notions	537
27.2	Zero-Switch Formulations	537

Contents	xiii
27.3 One-Switch Utility Formulations	538
27.4 One-Switch Utility Independence	540
27.5 Assessing the Functional Form for One-Switch Utility Independence	542
27.6 N-Switch Utility Independence	544
27.7 Summary	545
PART VI: MULTIATTRIBUTE UTILITY COPULAS	549
28 Multiattribute Utility Copulas	551
28.1 Introduction	551
28.2 What Is a Multiattribute Utility Copula?	553
28.3 Why Do We Need Both Class 1 and Class 0 Utility Copulas?	559
28.4 Extensions to Multiple Attributes	562
28.5 The Inverse Problem: Calculating the Utility Copula Function for a Given Multiattribute Utility Function	564
28.6 Be Careful with the Consistency Conditions	566
28.7 Summary	569
29 Archimedean Utility Copulas	573
29.1 Introduction	573
29.2 Archimedean Utility Copulas	574
29.3 Class 0 Archimedean Utility Copulas	579
29.4 Archimedean Utility Copulas with Improper Generating Functions	582
29.5 Summary	584
30 Assessing an Archimedean Utility Copula	587
30.1 Introduction	587
30.2 Assessing an Archimedean Multiattribute Utility Function	588
30.3 Assessments Needed for Constructing a Two-Attribute Utility Function Using an Archimedean Utility Copula	589
30.4 Determining the Generating Function	595
30.5 Summary of the Approach	602
30.6 Convergence and Comparison with Other Approaches	602
30.7 Summary	606
31 Utility Copula Functions Matching All Boundary Assessments	612
31.1 Introduction: The Need for Copula Functions Matching All Boundary Assessments	612
31.2 Archimedean Copulas Match Only One Boundary Assessment for Each Attribute	613
31.3 Double-Sided Utility Copulas	614
31.4 Double-Sided Utility Copulas Using Three Grounded Surfaces	617
31.5 Utility Copula Functions Using a Single Grounded Surface	623
31.6 Summary	628
32 Preference and Value Copulas	635
32.1 Introduction	635
32.2 Single-Sided Preference and Value Copulas	636

xiv	Contents
32.3 Double-Sided Preference and Value Copulas	638
32.4 The Ordinal One-Switch Property	639
32.5 Double-Sided Value Copulas Satisfying Ordinal One-Switch Independence	641
32.6 Summary	644
33 Reflections on What We Have Learned	646
33.1 Introduction: Review of Some Important Concepts	646
Appendix A Composite Functions, Inverse Functions, and Archimedean Combinations	651
Appendix B Jensen's Equality and Inequality	658
Appendix C Delta Property for a Discrete Number of Points	660
Appendix D Decomposing Discrete Multiattributed Indifference Probability Assessments Using the Utility Tree	665
Index	671
