	Preface	***xi***
1	***What's it all about?***	***1***
1.1	The fold or saddle-node bifurcation	2
1.2	Bifurcations of contours	4
1.3	Zeeman catastrophe machine	5
1.4	The evolute	6
1.5	Pitchfork bifurcation	11
1.6	Conclusions	13
	Problems	14
I	**Catastrophe theory**	**17**
2	***Families of functions***	***19***
2.1	Critical points	19
2.2	Degeneracy in one variable	22
2.3	Families of functions	23
2.4	Cusp catastrophe	26
2.5	Why 'catastrophes'	29
	Problems	30
3	***The ring of germs of smooth functions***	***33***
3.1	Germs: making everything local	33
3.2	The ring of germs	35
3.3	Newton diagram	39
3.4	Nakayama's lemma	41
3.5	Ideals of finite codimension	43
3.6	Geometric criterion for finite codimension	45
	Problems	45
4	***Right equivalence***	***49***
4.1	Right equivalence	49
4.2	Jacobian ideal	51
4.3	Codimension	52
4.4	Nondegenerate critical points	52
4.5	Splitting Lemma	55
	Problems	59

5	***Finite determinacy***	***63***
5.1	Trivial families of germs	64
5.2	Finite determinacy	67
5.3	A partial converse	70
5.4	A refinement of the finite determinacy theorem	71
5.5	The homotopy method	72
5.6	Proof of finite determinacy theorems	74
5.7	Geometric criterion	77
	Problems	78
6	***Classification of the elementary catastrophes***	***81***
6.1	Classification of corank 1 singularities	82
6.2	Classification of corank 2 critical points	84
6.3	Thom's 7 elementary singularities	86
6.4	Further classification	87
	Problems	89
7	***Unfoldings and catastrophes***	***91***
7.1	Geometry of families of functions	92
7.2	Change of parameter and induced unfoldings	94
7.3	Equivalence of unfoldings	95
7.4	Versal unfoldings	97
7.5	The elementary catastrophes	100
7.6	Simple singularities	101
7.7	A variational bifurcation problem	103
	Problems	104
8	***Singularities of plane curves***	***109***
8.1	Classification	111
8.2	Unfoldings	111
8.3	Higher dimensions	114
	Problems	114
9	***Even functions***	***119***
9.1	Right equivalence	120
9.2	Unfoldings and versality	120
	Problems	122
II	**Singularity theory**	**123**
10	***Families of maps and bifurcations***	***125***
10.1	Bifurcation problems	125
	Problems	128

11	***Contact equivalence***	***129***
11.1	$\mathcal{K}$-equivalence	129
11.2	Local algebra of a map germ	131
11.3	The alternative definition	134
	Problems	136
12	***Tangent spaces***	***139***
12.1	Modules	141
12.2	Right tangent space	145
12.3	Left tangent space	145
12.4	Left-right tangent space	148
12.5	Contact tangent space	149
12.6	All together	152
12.7	Tangent spaces of unfoldings	154
12.8	Thom–Levine principle	156
12.9	Constant tangent spaces	158
	Problems	161
13	***Classification for contact equivalence***	***163***
13.1	Finite determinacy	163
13.2	Classification	166
13.3	Geometric criterion	171
	Problems	172
14	***Contact equivalence and unfoldings***	***175***
14.1	Equivalence of unfoldings and versality	175
14.2	Versal unfoldings of corank 1 maps	178
14.3	Versal unfoldings of corank 2 maps	179
	Problems	180
15	***Geometric applications***	***183***
15.1	Envelopes and caustics	183
15.2	Curvature and flatness	188
	Problems	193
16	***Preparation theorem***	***195***
16.1	Statement	195
16.2	Simple applications	196
16.3	Application to versality theorems	198
16.4	Application to invariant theory	201
	Problems	203
17	***Left–right equivalence***	***205***
17.1	Stable maps and germs	205
17.2	Versal unfoldings and stable maps	207
17.3	Example: maps of the plane to 3-space	211
17.4	Plane curves revisited	212
17.5	Multigerm singularities	214
17.6	Geometric Criterion	215
	Problems	216

III Bifurcation theory 217

18 Bifurcation problems and paths ***219***

18.1 The pitchfork bifurcation 221
18.2 Some standard bifurcations 222
18.3 Conclusion 228
Problems 228

19 Vector fields tangent to a variety ***229***

19.1 Ideals and vector fields 230
19.2 Calculation of θ_V 233
19.3 An example: the Whitney Umbrella 239
19.4 Functions on singular varieties 240
19.5 Some technical considerations 242
Problems 243

20 $\mathcal{K}_V$-equivalence ***247***

20.1 The definition and tangent space 247
20.2 Finite determinacy 249
20.3 An example: the cone 251
20.4 Versal unfoldings 252
20.5 Refined finite determinacy theorem 253
20.6 Geometric criterion 254
Problems 254

21 Classification of paths ***257***

21.1 A_1 core 259
21.2 A_2 core 261
21.3 A_3 core 271
21.4 A_4 core 276
21.5 $I_{2,2}$ core 278
21.6 $II_{2,2}$ core 281
21.7 Conclusion: classification of bifurcations 283
21.8 Bifurcations of hypersurfaces 284
Problems 288

22 Loose ends ***291***

22.1 Path versus bifurcation equivalence 292
22.2 Path versus left–right equivalence 293
22.3 Left-right versus bifurcation equivalence 294
22.4 Non-regular unfoldings 294
22.5 Multiple co-existing bifurcations 297
Problems 297

23 Constrained bifurcation problems ***299***

23.1 Symmetric bifurcations 299
23.2 Bifurcations with fixed zero 303
23.3 Bifurcation in variational problems 309
Problems 312

IV Appendices **313**

A Calculus of several variables ***315***
A.1 Linear maps and normal forms 315
A.2 Differentiation in several variables 322
A.3 Vector fields 330
A.4 Vector fields along a map 331
Problems 333

B Local geometry of regular maps ***335***
B.1 Changes of coordinates and diffeomorphisms 335
B.2 Inverse function theorem 338
B.3 Immersions & submersions 340
B.4 Submanifolds and local straightening 344
B.5 Example: the set of matrices of given rank 349
B.6 Maps of constant rank 349
B.7 Transversality 350
B.8 Linearly adapted coordinates 352
B.9 Lyapunov–Schmidt reduction 355
Problems 356

C Differential equations and flows ***361***
C.1 Existence and uniqueness 361
C.2 Vector fields and flows 364
C.3 The flow near a singular point 365
C.4 Linear differential equations 367
Problems 367

D Rings, ideals and modules ***369***
D.1 Rings 369
D.2 Ideals 371
D.3 Ideals and varieties 373
D.4 Derivations 373
D.5 Modules 374
D.6 Noetherian rings and modules 377
D.7 Nakayama's lemma 378
D.8 Weighted homogeneous functions 381
D.9 Elimination 383
D.10 Nullstellensatz 384
Problems 385

E Solutions to selected problems ***387***

References ***419***

Index ***427***
