<i>List of BTWs</i>	<i>page</i> xiv
<i>Preface</i>	xvii
<b>Part I Things You Just Gotta' Know</b>	
<b>1 Prelude: Symbiosis</b>	<b>3</b>
<b>2 Coordinating Coordinates</b>	<b>6</b>
2.1 Position-Dependent Basis Vectors	6
2.2 Scale Factors and Jacobians	9
Problems	15
<b>3 Complex Numbers</b>	<b>18</b>
3.1 Representations	18
3.2 Euler's Formula and Trigonometry	20
Problems	25
<b>4 Index Algebra</b>	<b>28</b>
4.1 Contraction, Dummy Indices, and All That	28
4.2 Two Special Tensors	30
4.3 Common Operations and Manipulations	33
4.4 The Moment of Inertia Tensor	37
Problems	39
<b>5 Brandishing Binomials</b>	<b>42</b>
5.1 The Binomial Theorem	42
5.2 Beyond Binomials	46
Problems	48
<b>6 Infinite Series</b>	<b>51</b>
6.1 Tests of Convergence	52
6.2 Power Series	58
6.3 Taylor Series	60
Problems	66

viii	CONTENTS	
<b>7</b>	<b>Interlude: Orbits in a Central Potential</b>	<b>73</b>
7.1	The Runge–Lenz Vector	73
7.2	Orbits in the Complex Plane	75
7.3	The Anomalies: True, Mean, and Eccentric Problems	76 78
<b>8</b>	<b>Ten Integration Techniques and Tricks</b>	<b>80</b>
8.1	Integration by Parts	80
8.2	Change of Variables	81
8.3	Even/Odd	83
8.4	Products and Powers of Sine & Cosine	86
8.5	Axial and Spherical Symmetry	88
8.6	Differentiation with Respect to a Parameter	89
8.7	Gaussian Integrals	90
8.8	Completing the Square	92
8.9	Expansion of the Integrand	94
8.10	Partial Fractions Problems	96 99
<b>9</b>	<b>The Dirac Delta Function</b>	<b>105</b>
9.1	The Infinite Spike	105
9.2	Properties of the Delta Function Problems	107 114
<b>10</b>	<b>Coda: Statistical Mechanics</b>	<b>117</b>
10.1	The Partition Function	117
10.2	The Chemical Potential	120
10.3	The Ideal Boson Gas Problems	122 125
<b>Part II</b>	<b>The Calculus of Vector Fields</b>	
<b>11</b>	<b>Prelude: Visualizing Vector Fields</b>	<b>129</b>
	Problems	132
<b>12</b>	<b>Grad, Div, and Curl</b>	<b>133</b>
12.1	The Del Operator	133
12.2	$\vec{\nabla}$ and Vector Identities	138
12.3	Different Coordinate Systems	141
12.4	Understanding $\nabla^2$ , $\vec{\nabla} \cdot$ , and $\vec{\nabla} \times$ Problems	145 152
<b>13</b>	<b>Interlude: Irrotational and Incompressible</b>	<b>155</b>
	Problems	158
<b>14</b>	<b>Integrating Scalar and Vector Fields</b>	<b>159</b>
14.1	Line Integrals	159

CONTENTS	ix
14.2 Surface Integrals	164
14.3 Circulation	170
14.4 Flux	182
Problems	193
<b>15 The Theorems of Gauss and Stokes</b>	<b>197</b>
15.1 The Divergence Theorem	197
15.2 Stokes' Theorem	203
15.3 The Fundamental Theorem of Calculus — Revisited	210
15.4 The Helmholtz Theorem	212
Problems	214
<b>16 Mostly Maxwell</b>	<b>218</b>
16.1 Integrating Maxwell	218
16.2 From Integrals to Derivatives	222
16.3 The Potentials	224
Problems	226
<b>17 Coda: Simply Connected Regions</b>	<b>228</b>
17.1 No Holes Barred?	229
17.2 A Real Physical Effect	230
17.3 Single-Valued	232
Problems	235
<b>Part III Calculus in the Complex Plane</b>	
<b>18 Prelude: Path Independence in the Complex Plane</b>	<b>239</b>
18.1 Analytic Functions	239
18.2 Cauchy's Integral Formula	243
Problems	245
<b>19 Series, Singularities, and Branches</b>	<b>248</b>
19.1 Taylor Series and Analytic Continuation	248
19.2 Laurent Series	250
19.3 Multivalued Functions	254
19.4 The Complex Logarithm	261
Problems	265
<b>20 Interlude: Conformal Mapping</b>	<b>269</b>
20.1 Visualizing Maps	269
20.2 The Complex Potential	278
Problems	285
<b>21 The Calculus of Residues</b>	<b>287</b>
21.1 The Residue Theorem	287
21.2 Integrating Around a Circle	293
21.3 Integrals Along the Real Axis	295

x	CONTENTS	
21.4	Integration with Branch Cuts	301
21.5	Integrals with Poles on the Contour	303
21.6	Series Sums with Residues	307
	Problems	311
<b>22</b>	<b>Coda: Analyticity and Causality</b>	<b>315</b>
22.1	Acting on Impulse	315
22.2	Waves on a String	318
22.3	The Klein–Gordon Propagator	320
	Problems	322
<b>Part IV Linear Algebra</b>		
<b>23</b>	<b>Prelude: Superposition</b>	<b>325</b>
	Problems	327
<b>24</b>	<b>Vector Space</b>	<b>328</b>
24.1	Vector Essentials	328
24.2	Basis Basics	330
24.3	Kets and Reps	336
	Problems	339
<b>25</b>	<b>The Inner Product</b>	<b>340</b>
25.1	The Adjoint	340
25.2	The Schwarz Inequality	345
25.3	Orthonormality	348
25.4	Building a Better Basis: Gram–Schmidt	353
25.5	Completeness	356
25.6	Matrix Representation of Operators	362
	Problems	364
<b>26</b>	<b>Interlude: Rotations</b>	<b>368</b>
26.1	Active and Passive Transformations	368
26.2	What Makes a Rotation a Rotation?	373
26.3	Improper Orthogonal Matrices: Reflections	381
26.4	Rotations in $\mathbb{R}^3$	385
26.5	Rotating Operators: Similarity Transformations	391
26.6	Generating Rotations	395
	Problems	400
<b>27</b>	<b>The Eigenvalue Problem</b>	<b>405</b>
27.1	Solving the Eigenvalue Equation	406
27.2	Normal Matrices	412
27.3	Diagonalization	419
27.4	The Generalized Eigenvalue Problem	429
	Problems	430

CONTENTS	xi
<b>28 Coda: Normal Modes</b>	437
28.1 Decoupling Oscillators	437
28.2 Higher Dimensions	443
Problems	451
<b>Entr'acte: Tensors</b>	
<b>29 Cartesian Tensors</b>	457
29.1 The Principle of Relativity	457
29.2 Stress and Strain	458
29.3 The Equivalence Class of Rotations	460
29.4 Tensors and Pseudotensors	465
29.5 Tensor Invariants and Invariant Tensors	466
Problems	469
<b>30 Beyond Cartesian</b>	473
30.1 A Sheared System	473
30.2 The Metric	475
30.3 Upstairs, Downstairs	477
30.4 Lorentz Tensors	482
30.5 General Covariance	484
30.6 Tensor Calculus	487
30.7 Geodesics, Curvature, and Tangent Planes	492
Problems	495
<b>Part V Orthogonal Functions</b>	
<b>31 Prelude: 1 2 3 . . . Infinity</b>	503
31.1 The Continuum Limit	503
31.2 An Inner Product of Functions	505
Problems	507
<b>32 Eponymous Polynomials</b>	508
32.1 Legendre Polynomials	508
32.2 Laguerre and Hermite Polynomials	511
32.3 Generating Functions	515
Problems	519
<b>33 Fourier Series</b>	523
33.1 A Basis of Sines and Cosines	523
33.2 Examples and Applications	526
33.3 Even and Odd Extensions	530
Problems	535
<b>34 Convergence and Completeness</b>	537
34.1 Pointwise and Uniform Convergence	537
34.2 Parseval's Theorem	543
Problems	548

xii	CONTENTS	
<b>35</b>	<b>Interlude: Beyond the Straight and Narrow</b>	<b>550</b>
35.1	Fourier Series on a Rectangular Domain	550
35.2	Expanding on a Disk	552
35.3	On a Sphere: The $Y_{\ell m}$ 's	555
35.4	From Shell to Ball	564
	Problems	566
<b>36</b>	<b>Fourier Transforms</b>	<b>569</b>
36.1	From Fourier Sum to Fourier Integral	569
36.2	Physical Insights	574
36.3	Complementary Spaces	580
36.4	A Basis of Plane Waves	587
36.5	Convolution	589
36.6	Laplace Transforms	594
	Problems	598
<b>37</b>	<b>Coda: Of Time Intervals and Frequency Bands</b>	<b>604</b>
37.1	Sampling and Interpolation	605
37.2	Aliasing	609
	Problems	611
<b>Part VI Differential Equations</b>		
<b>38</b>	<b>Prelude: First Order First</b>	<b>615</b>
	Problems	621
<b>39</b>	<b>Second-Order ODEs</b>	<b>623</b>
39.1	Constant Coefficients	623
39.2	The Wronskian	625
39.3	Series Solutions	630
39.4	Legendre and Hermite, Re-revisited	636
	Problems	641
<b>40</b>	<b>Interlude: The Sturm–Liouville Eigenvalue Problem</b>	<b>645</b>
40.1	Whence Orthogonality?	645
40.2	The Sturm–Liouville Operator	646
40.3	Beyond Fourier	652
	Problems	657
<b>41</b>	<b>Partial Differential Equations</b>	<b>663</b>
41.1	Separating Space and Time	665
41.2	The Helmholtz Equation	670
41.3	Boundary Value Problems	675
41.4	The Drums	683
	Problems	688

CONTENTS	xiii
<b>42 Green's Functions</b>	<b>694</b>
42.1 A Unit Source	694
42.2 The Eigenfunction Expansion	703
42.3 Going Green in Space and Time	709
42.4 Green's Functions and Fourier Transforms	712
Problems	717
<b>43 Coda: Quantum Scattering</b>	<b>721</b>
43.1 The Born Approximation	721
43.2 The Method of Partial Waves	725
Problems	727
<i>Appendix A Curvilinear Coordinates</i>	729
<i>Appendix B Rotations in <math>\mathbb{R}^3</math></i>	733
<i>Appendix C The Bessel Family of Functions</i>	746
<i>References</i>	757
<i>Index</i>	759
