

# Contents

<b>Preface</b>	<b>xiii</b>
<b>Chapter 1: Some Highlights</b>	<b>1</b>
1. Graph Terminology	1
2. Branching Number	2
3. Electric Current	5
4. Random Walks	6
5. Percolation	7
6. Branching Processes	8
7. Random Spanning Trees	9
8. Hausdorff Dimension	12
9. Capacity	13
10. Embedding Trees into Euclidean Space	15
11. Notes	16
12. Collected In-Text Exercises	17
13. Additional Exercises	17
<b>Chapter 2: Random Walks and Electric Networks</b>	<b>18</b>
1. Circuit Basics and Harmonic Functions	18
2. More Probabilistic Interpretations	24
3. Network Reduction	27
4. Energy	31
5. Transience and Recurrence	36
6. Rough Isometries and Hyperbolic Graphs	43
7. Hitting, Commute, and Cover Times	48
8. The Canonical Gaussian Field	50
9. Notes	53
10. Collected In-Text Exercises	57
11. Additional Exercises	59

<b>Chapter 3: Special Networks</b>	<b>74</b>
1. Flows, Cutsets, and Random Paths	74
2. Trees	79
3. Growth of Trees	81
4. Cayley Graphs	86
5. Notes	90
6. Collected In-Text Exercises	91
7. Additional Exercises	92
<b>Chapter 4: Uniform Spanning Trees</b>	<b>95</b>
1. Generating Uniform Spanning Trees	95
2. Electrical Interpretations	105
3. The Square Lattice $\mathbb{Z}^2$	111
4. Notes	116
5. Collected In-Text Exercises	123
6. Additional Exercises	125
<b>Chapter 5: Branching Processes, Second Moments, and Percolation</b>	<b>131</b>
1. Galton-Watson Branching Processes	132
2. The First-Moment Method	137
3. The Weighted Second-Moment Method	140
4. Quasi-independent Percolation	143
5. Transience of Percolation Clusters in $\mathbb{Z}^d$	146
6. Reversing the Second-Moment Inequality	149
7. Surviving Galton-Watson Trees	153
8. Harris's Inequality	160
9. Galton-Watson Networks	162
10. Notes	164
11. Collected In-Text Exercises	166
12. Additional Exercises	167
<b>Chapter 6: Isoperimetric Inequalities</b>	<b>174</b>
1. Flows and Submodularity	174
2. Spectral Radius	181
3. Nonbacktracking Paths and Cogrowth	186
4. Relative Mixing Rate, Spectral Gap, and Expansion in Finite Networks	190
5. Planar Graphs	195
6. Euclidean Lattices and Entropy	200
7. Expansion Profiles and Decay of Transition Probabilities	205
8. Anchored Isoperimetric Profiles and Transience	211
9. Anchored Expansion and Percolation	213
10. Notes	222
11. Collected In-Text Exercises	224
12. Additional Exercises	225

CONTENTS	ix
<b>Chapter 7: Percolation on Transitive Graphs</b>	<b>233</b>
1. Groups and Amenability	235
2. Tolerance and Ergodicity	237
3. The Number of Infinite Clusters	240
4. Inequalities for $p_c$	244
5. Merging Infinite Clusters and Invasion Percolation	250
6. Upper Bounds for $p_u$	255
7. Lower Bounds for $p_u$	257
8. Bootstrap Percolation on Regular Trees	262
9. Notes	264
10. Collected In-Text Exercises	268
11. Additional Exercises	269
<b>Chapter 8: The Mass-Transport Technique and Percolation</b>	<b>273</b>
1. The Mass-Transport Principle for Cayley Graphs	273
2. Beyond Cayley Graphs: Unimodularity	276
3. Infinite Clusters in Invariant Percolation	282
4. Critical Percolation on Nonamenable Transitive Unimodular Graphs	286
5. Bernoulli Percolation on Planar Quasi-transitive Graphs	287
6. Properties of Infinite Clusters	291
7. Invariant Percolation on Amenable Graphs	293
8. Appendix: Unimodularity of Planar Quasi-transitive Graphs	296
9. Notes	299
10. Collected In-Text Exercises	303
11. Additional Exercises	304
<b>Chapter 9: Infinite Electrical Networks and Dirichlet Functions</b>	<b>309</b>
1. Free and Wired Electrical Currents	309
2. Planar Duality	311
3. Harmonic Dirichlet Functions	313
4. Planar Graphs and Hyperbolic Graphs	320
5. Random Walk Traces	326
6. Notes	330
7. Collected In-Text Exercises	334
8. Additional Exercises	335
<b>Chapter 10: Uniform Spanning Forests</b>	<b>339</b>
1. Limits over Exhaustions	339
2. Coupling, Harmonic Dirichlet Functions, and Expected Degree	343
3. Planar Networks and Euclidean Lattices	350
4. Tail Triviality	352
5. The Number of Trees	355
6. The Size of the Trees	364
7. Loop-Erased Random Walk and Harmonic Measure from Infinity	375

8. Appendix: Von Neumann Dimension and $\ell^2$ -Betti Numbers	377
9. Notes	382
10. Collected In-Text Exercises	383
11. Additional Exercises	385
<b>Chapter 11: Minimal Spanning Forests</b>	<b>388</b>
1. Minimal Spanning Trees	388
2. Deterministic Results	391
3. Basic Probabilistic Results	395
4. Tree Sizes	397
5. Planar Graphs	403
6. Nontreeable Groups	404
7. Notes	405
8. Collected In-Text Exercises	407
9. Additional Exercises	408
<b>Chapter 12: Limit Theorems for Galton-Watson Processes</b>	<b>410</b>
1. Size-Biased Trees and Immigration	410
2. Supercritical Processes: Proof of the Kesten-Stigum Theorem	414
3. Subcritical Processes	416
4. Critical Processes	417
5. Notes	420
6. Collected In-Text Exercises	420
7. Additional Exercises	421
<b>Chapter 13: Escape Rate of Random Walks and Embeddings</b>	<b>423</b>
1. Basic Examples	423
2. The Varopoulos-Carne Bound	429
3. An Application to Mixing Time	431
4. Markov Type of Metric Spaces	436
5. Embeddings of Finite Metric Spaces	440
6. A Diffusive Lower Bound for Cayley Graphs	447
7. Branching Number of a Graph	450
8. Tree-Indexed Random Walks	453
9. Notes	456
10. Collected In-Text Exercises	461
11. Additional Exercises	462

CONTENTS	xi
<b>Chapter 14: Random Walks on Groups and Poisson Boundaries</b>	<b>467</b>
1. Tail, Entropy, and Speed for Transitive Markov Chains	468
2. Harmonic Functions and the Liouville Property	474
3. Harmonic Functions and the Poisson Boundary	480
4. Identifying the Poisson Boundary	486
5. Appendix: Ergodic Theorems	494
6. Appendix: The Zero-Two Law for Transitive Markov Chains	499
7. Notes	503
8. Collected In-Text Exercises	508
9. Additional Exercises	509
<b>Chapter 15: Hausdorff Dimension</b>	<b>512</b>
1. Basics	512
2. Coding by Trees	516
3. Galton-Watson Fractals	521
4. Hölder Exponent	524
5. Derived Trees	526
6. Notes	530
7. Collected In-Text Exercises	530
8. Additional Exercises	531
<b>Chapter 16: Capacity and Stochastic Processes</b>	<b>534</b>
1. Definitions	534
2. Percolation on Trees	537
3. Euclidean Space	538
4. Fractal Percolation and Brownian Intersections	541
5. Generalized Diameters and Average Meeting Height on Trees	548
6. Notes	550
7. Collected In-Text Exercises	553
8. Additional Exercises	554
<b>Chapter 17: Random Walks on Galton-Watson Trees</b>	<b>556</b>
1. Markov Chains and Ergodic Theory	556
2. Stationary Measures on Trees	559
3. Speed on Galton-Watson Trees	565
4. Harmonic Measure: The Goal	569
5. Flow Rules and Markov Chains on the Space of Trees	570
6. The Hölder Exponent of Limit Uniform Measure	573
7. Dimension Drop for Other Flow Rules	576
8. Harmonic-Stationary Measure	577
9. Confinement of Simple Random Walk	580
10. Numerical Calculations	583
11. Notes	588
12. Collected In-Text Exercises	589

<b>xii</b>	<b>CONTENTS</b>
13. Additional Exercises	590
<b>Comments on Exercises</b>	<b>594</b>
<b>Bibliography</b>	<b>648</b>
<b>Glossary of Notation</b>	<b>687</b>
<b>Index</b>	<b>690</b>
