- Ampère–Maxwell equation 31, 41–43
- analogy between magnetic fields
  - and vorticity 123, 290
- angular momentum
  - conservation of in MHD turbulence 166, 278–281
  - conservation of in rotating turbulence 463
  - of a turbulent cloud 273–276
  - transport in accretion discs 507
- anisotropy in
  - MHD turbulence 155–159, 166, 277–288
  - rapidly-rotating turbulence 109
- anti-dynamo theorems 427–429
- arc
  - welding 175, 352
  - remelting of ingots 175–178, 351–354
- arcade (magnetic) 493
- Arnold’s stability theorem 224–226
- azimuthal field generation ( $\Omega$ -effect) 422–426, 437
  
- ballooning modes (in fusion plasma) 528–532
- Bénard convection 159–164
- binary star systems 503
- Biot–Savart law 32–34
- Bödewadt boundary layer 100, 172, 327
- Boussinesq approximation 160
  
- buoyancy
  - in castings 165
  - magnetic 489
- Burgers’ vortex tube 87
  
- cascade (energy) 234
- casting
  - of aluminium 317–318
  - of steel 317–320
  - of super-alloys 352–354
- Chandrasekhar–Velikhov instability
  - (or MRI) 215–244, 512
- chromosphere 485
- columnar eddies
  - in MHD turbulence 153–159, 166, 342–349
  - in rapidly-rotating turbulence 104–110
  - in the geodynamo 450–452, 457–460
- conductivity, electrical 8
- conservation of
  - cross-helicity 131
  - kinetic helicity 83–85
  - Loitsyansky’s integral 268–276, 281–286
  - magnetic helicity 128–130
  - Saffman’s integral 268–271, 281
- controlled fusion
  - basic requirements 516
  - ballooning modes 528–532
  - stability requirements 517–532
  - tokamaks 532–535
  - tritium breeding 516, 536
- convection
  - in castings 165
  - in the core of the earth 404–409
  - damping of 160–165
  - zone in the sun 484–486
- core-mantle boundary (CMB) 404
- core of the earth 404–410
- Coriolis force 102
- corona 486
- coronal mass ejection 493
- correlation function 240–242
