

## Index of Definitions

Definitions not numbered in the text are indexed here by the number of the theorem, lemma, or definition immediately preceding; thus “1.4 ff.” indicates an unnumbered definition occurring in the body of the text after Theorem 1.4.

1.1	$\mathcal{A}$ certificate for $\mathcal{M}$	5
1.2	$\mathcal{M}$ is countably certified	5
1.2 ff.	$\mathcal{M}_\xi, \mathcal{N}_\xi$ , for $\xi < \Omega$	6
1.3 ff.	$K^c$	7
1.4 ff.	the stationary class $A_0$	8
2.1	$\mathcal{T}$ is $\alpha$ -short	10
2.4 ff.	almost normal iteration tree	12
2.4 ff.	almost $k$ -maximal iteration tree	12
2.9	$\theta$ -iterable, $\theta$ -iteration strategy, $(\omega, \theta)$ -iterable, $(\omega, \theta)$ -iteration strategy	23
3.1	coiteration of $\mathcal{M}$ with $\mathcal{N}$	25
3.1 ff.	$(\Sigma, \Gamma)$ coiteration of $\mathcal{M}$ with $\mathcal{N}$ , $\mathcal{P} \trianglelefteq \mathcal{Q}$	25
3.2	Weasel, set premouse, proper premouse	25
3.4	universal weasel	26
3.8	$\Gamma$ is $S$ -thick in $M$	28
4.1	$H^{\mathcal{M}}(X)$	29
4.2	$\mathcal{M}$ has the $S$ -hull property at $\alpha$	29
4.4	$\mathcal{M}$ has the $S$ -definability property at $\alpha$	30
5.3	$\mathcal{M}$ is $S$ -sound	36
5.5	$\text{Def}(W, S)$	36
5.8	$K(S)$	37
5.17	$K$	42
6.1	$\mathcal{M}$ is $(\alpha, S)$ strong	43
6.4	$\mathcal{M}$ is $\alpha$ -strong	44
6.5	simple phalanx	44
6.5 ff.	$lh(\mathcal{B}), \lambda(\beta, \mathcal{B})$ , for $\mathcal{B}$ a phalanx	44
6.6	iteration tree on a phalanx	45
6.6 ff.	$\theta$ -iterable phalanx	45
6.7	$(\Sigma, \mathcal{R})$ -generated phalanx	45
6.8	$K^c$ -generated phalanx	46
6.12	properly small	51
8.1	$\Gamma$ is thick in $W$ , $W$ has the hull or definability property at $\alpha$ , $\text{Def}(W)$	73
8.4	$F$ coheres with $\mathcal{M}$	77
8.5	the $E$ -extension of $\Phi(T)$	77
8.11	$\mathcal{M}$ is below $O^{\mathbb{P}}$	83
9.1	creature	89
9.2	creature of $\mathbb{C}$ , $\mathbb{C}$ exotic	89

112      **Index of Definitions**

9.2 ff.	$(j, \xi)$ is an index of $\mathcal{M}$ in $\mathbb{C}$ , $\text{ind}(\mathcal{M})$	89
9.2 ff.	coarse premouse	89
9.3	$\mathbb{C}^{\mathcal{M}}$ , the $K^c$ construction of $\mathcal{M}$	90
9.4	$(\mathcal{R}, Q, \pi)$ is a $k$ -realization of $\mathcal{M}$	90
9.5	$\mathcal{M}$ and $\mathcal{N}$ agree below $\gamma$	90
9.6	phalanx of creatures	90
9.7	$\Phi(\mathcal{T})$ , the phalanx derived from $\mathcal{T}$	91
9.7 ff.	the $(t, \lambda)$ dropdown sequence of $\mathcal{M}$	91
9.8 ff.	$(\mathcal{M}, t, \xi)$ resurrection sequence for $\lambda$	92
9.9	the $p$ th partial resurrection $(\sigma_p, \text{Res}_p)$	92
9.10	the complete resurrection $(\sigma, \text{Res})$	93
9.11	realization $\mathcal{E}$ of a phalanx $\mathcal{B}$	93
9.12	$\mathcal{E}$ -realization of $\mathcal{M}_\gamma^{\mathcal{T}}$	93
9.13	$\mathcal{E}$ -realization of a branch $b$ of $\mathcal{T}$	94
9.13 ff.	cutoff point of a coarse premouse	94
9.14 ff.	$\alpha$ survives at $\beta$	94
9.14 ff.	$\mathbf{Y}$ -realization	95
9.15	$\mathcal{E}$ has enough room	96
9.16	$\alpha$ is a break point at $\gamma$	96
