<i>Preface</i>	<i>page xi</i>
<i>Introduction</i>	<i>xiii</i>
1 Modular Representations and Elementary Abelian Groups	1
1.1 Introduction	1
1.2 Representation Type	1
1.3 Shifted Subgroups	3
1.4 The Language of π -Points	5
1.5 The Stable Module Category	6
1.6 The Derived Category	8
1.7 Singularity Categories	10
1.8 Cohomology of Elementary Abelian p -Groups	12
1.9 Chouinard's Theorem, Dade's Lemma and Rank Varieties	15
1.10 Carlson's L_ζ Modules, and a Matrix Version	18
1.11 Diagrams for Modules	20
1.12 Tensor Products	24
1.13 Duality	26
1.14 Symmetric and Exterior Powers	28
1.15 Schur Functions	29
1.16 Schur Functors	31
1.17 Radical Layers of kE	33
1.18 Twisted Versions of kE	35
2 Cyclic Groups of Order p	38
2.1 Introduction	38
2.2 Modules for \mathbb{Z}/p	38
2.3 Tensor Products	39
2.4 Gaussian Polynomials	41
2.5 Generalised Gaussian Polynomials and a Hook Formula	42

2.6	λ -Rings and Representations of $SL(2, \mathbb{C})$	45
2.7	The Representation Ring of \mathbb{Z}/p	47
2.8	Symmetric and Exterior Powers of Jordan Blocks	50
2.9	Schur Functors for $SL(2, \mathbb{C})$ and \mathbb{Z}/p	52
3	Background from Algebraic Geometry	54
3.1	Affine Space and Affine Varieties	54
3.2	Generic Points and Closed Points	55
3.3	Projective Space and Projective Varieties	57
3.4	Tangent Spaces	59
3.5	Presheaves and Sheaves	60
3.6	Stalks and Sheafification	62
3.7	The Language of Schemes	63
3.8	Sheaves of Modules	64
3.9	Coherent Sheaves on Projective Varieties	65
3.10	Cohomology of Sheaves	69
4	Jordan Type	72
4.1	Nilvarieties	72
4.2	Matrices and Tangent Spaces	75
4.3	A Theorem of Gerstenhaber	76
4.4	Dominance Order and Nilpotent Jordan Types	78
4.5	Generic and Maximal Jordan Type	83
4.6	Tensor Products	86
5	Modules of Constant Jordan Type	89
5.1	Introduction and Definitions	89
5.2	Homogeneous Modules	94
5.3	An Exact Category	98
5.4	Endotrivial Modules	101
5.5	Wild Representation Type	103
5.6	The Constant Image Property	106
5.7	The Generic Kernel	110
5.8	The Subquotient $\text{Rad}^{-1}\mathfrak{K}(M)/\text{Rad}^2\mathfrak{K}(M)$	112
5.9	The Constant Kernel Property	114
5.10	The Generic Image	116
5.11	W -Modules	118
5.12	Constant Jordan type with One Non-Projective Block	119
5.13	Rickard's Conjecture	120
5.14	Consequences and Variations	123
5.15	Further Conjectures	127
6	Vector Bundles on Projective Space	129
6.1	Definitions and First Properties	129
6.2	Tests for Vector Bundles	131

Contents

vii

6.3	Vector Bundles on Projective Space	134
6.4	The Tangent Bundle and the Euler Sequence	136
6.5	Homogeneity and Uniformity	136
6.6	Monads and Subquotients	138
6.7	The Null Correlation Bundle	139
6.8	The Examples of Tango	140
6.9	Cohomology of Projective Space	141
6.10	Differential Forms and Bott's Theorem	142
6.11	Simplicity	143
6.12	Hilbert's Syzygy Theorem	146
7	Chern Classes	149
7.1	Chern Classes of Graded Modules	149
7.2	Chern Classes of Coherent Sheaves on \mathbb{P}^{r-1}	151
7.3	Some Computations	154
7.4	Restriction of Vector Bundles	155
7.5	Chern Numbers of Twists and Duals	157
7.6	Chern Roots	159
7.7	Power Sums	160
7.8	The Hirzebruch–Riemann–Roch Theorem	166
7.9	Chern Numbers and the Frobenius Map	169
8	Modules of Constant Jordan Type and Vector Bundles	172
8.1	Introduction	172
8.2	The Operator θ	173
8.3	The Action of θ on Fibres	174
8.4	The Functors \mathcal{F}_i and $\mathcal{F}_{i,j}$	176
8.5	Twists and Syzygies	181
8.6	Chern Numbers of $\mathcal{F}_i(M)$	183
8.7	The Construction: $p = 2$	185
8.8	The Construction: p Odd	187
8.9	Proof of the Realisation Theorem	189
8.10	Functoriality	192
8.11	Tensor Products	192
8.12	Negative Tate Cohomology	194
8.13	The BGG Correspondence	195
9	Examples	199
9.1	Modules for $(\mathbb{Z}/2)^2$	199
9.2	Modules for $(\mathbb{Z}/p)^2$	201
9.3	Larger Rank	203
9.4	Nilvarieties	204
9.5	The Tangent and Cotangent Bundles	205
9.6	The Null Correlation Bundle, $p = 2$	207

9.7	The Null Correlation Bundle, p Odd	208
9.8	Instanton Bundles	210
9.9	Schwarzenberger's Bundles	212
9.10	The Examples of Tango	214
9.11	The Horrocks–Mumford Bundle	215
9.12	Automorphisms of the Horrocks–Mumford Bundle	218
9.13	Realising the Horrocks–Mumford Bundle	223
9.14	The Horrocks Parent Bundle and the Tango Bundle	226
10	Restrictions Coming from Chern Numbers	232
10.1	Matrices of Constant Rank	232
10.2	Congruences on Chern Numbers	235
10.3	Restrictions on Stable Jordan Type, p Odd	237
10.4	Eliminating More Stable Jordan Types	238
10.5	Restrictions on Jordan Type for $p = 2$	240
10.6	Applying Hirzebruch–Riemann–Roch for $p = 2$: The Case $m = 0$	244
10.7	Bypassing Hirzebruch–Riemann–Roch	246
10.8	Applying and Bypassing Hirzebruch–Riemann–Roch for $p = 2$: The Case $1 \leq m \leq r - 3$	246
10.9	Nilvarieties of Constant Jordan Type $[p]^n$ for $p \geq 3$	249
10.10	Nilvarieties with a Single Jordan Block	251
10.11	Babylonian Towers	253
11	Orlov's Correspondence	255
11.1	Introduction	255
11.2	Maximal Cohen–Macaulay Modules	257
11.3	The Orlov Correspondence	259
11.4	The Functors	261
11.5	An Example	263
11.6	The Bidirectional Koszul Complex	264
11.7	A Bimodule Resolution	267
11.8	The Adjunction	269
11.9	The Equivalence	269
11.10	The Trivial Module	270
11.11	Computer Algebra	272
11.12	Cohomology	272
11.13	Twisted Versions of kE	274
12	Phenomenology of Modules over Elementary Abelian p-Groups	276
12.1	Introduction	276
12.2	Module Constructions	278
12.3	Odd Primes Are More Difficult	280
12.4	Relative Cohomology	281

Contents

ix

12.5	Small Modules for Quadrics, $p = 2$	283
12.6	Small Modules for Quadrics, p Odd	285
12.7	Trying to Understand the Specht Module $S^{(3^3)}$	286
12.8	Modules with Small Loewy Length	287
12.9	Small Modules for $(\mathbb{Z}/p)^2$	296
12.10	The Bound is Close to Sharp	299
Appendix A	Modules for \mathbb{Z}/p	301
Appendix B	Problems	308
	<i>References</i>	312
	<i>Index</i>	324
