REPRESENTATIONS OF THE INFINITE SYMMETRIC GROUP

Representation theory of big groups is an important and quickly developing part of modern mathematics, giving rise to a variety of important applications in probability and mathematical physics. This book provides the first concise and self-contained introduction to the theory on the simplest, yet very nontrivial, example of the infinite symmetric group, focusing on its deep connections to probability, mathematical physics, and algebraic combinatorics.

Following a discussion about the classical Thoma theorem, which describes the characters of the infinite symmetric group, the authors describe explicit constructions of an important class of representations, including both the irreducible and generalized regular ones. Complete with detailed proofs, as well as numerous examples and exercises which help to summarize recent developments in the field, this book will enable graduates to enhance their understanding of the topic while also aiding lecturers and researchers in related areas.

Alexei Borodin is a Professor of Mathematics at the Massachusetts Institute of Technology. He also holds the position of Principal Researcher at the Institute for Information Transmission Problems of the Russian Academy of Sciences, Moscow.

Grigori Olshanski is a Principal Researcher in the Section of Algebra and Number Theory at the Institute for Information Transmission Problems of the Russian Academy of Sciences, Moscow. He also holds the position of Dobrushin Professor at the National Research University Higher School of Economics, Moscow.

Already published

- 124 K. Lux & H. Pahlings *Representations of groups*
- 125 K. S. Kedlaya *p -adic differential equations*
- 126 R. Beals & R. Wong *Special functions*
- 127 E. de Faria & W. de Melo *Mathematical aspects of quantum field theory*
- 128 A. Terras *Zeta functions of graphs*
- 129 D. Goldfeld & J. Hundley *Automorphic representations and L -functions for the general linear group, I*
- 130 D. Goldfeld & J. Hundley *Automorphic representations and L -functions for the general linear group, II*
- 131 D. A. Craven *The theory of fusion systems*
- 132 J. Väänänen *Models and games*
- 133 G. Malle & D. Testerman *Linear algebraic groups and finite groups of Lie type*
- 134 P. Li *Geometric analysis*
- 135 F. Maggi *Sets of finite perimeter and geometric variational problems*
- 136 M. Brodmann & R. Y. Sharp *Local cohomology (2nd Edition)*
- 137 C. Muscalu & W. Schlag *Classical and multilinear harmonic analysis, I*
- 138 C. Muscalu & W. Schlag *Classical and multilinear harmonic analysis, II*
- 139 B. Helffer *Spectral theory and its applications*
- 140 R. Pemantle & M. C. Wilson *Analytic combinatorics in several variables*
- 141 B. Branner & N. Fagella *Quasiconformal surgery in holomorphic dynamics*
- 142 R. M. Dudley *Uniform central limit theorems (2nd Edition)*
- 143 T. Leinster *Basic category theory*
- 144 I. Arzhantsev, U. Derenthal, J. Hausen & A. Laface *Cox rings*
- 145 M. Viana *Lectures on Lyapunov exponents*
- 146 J.-H. Evertse & K. Györy *Unit equations in Diophantine number theory*
- 147 A. Prasad *Representation theory*
- 148 S. R. Garcia, J. Mashreghi & W. T. Ross *Introduction to model spaces and their operators*
- 149 C. Godsil & K. Meagher *Erdős–Ko–Rado theorems: Algebraic approaches*
- 150 P. Mattila *Fourier analysis and Hausdorff dimension*
- 151 M. Viana & K. Oliveira *Foundations of ergodic theory*
- 152 V. I. Paulsen & M. Raghupathi *An introduction to the theory of reproducing kernel Hilbert spaces*
- 153 R. Beals & R. Wong *Special functions and orthogonal polynomials*
- 154 V. Jurdjevic *Optimal control and geometry: Integrable systems*
- 155 G. Pisier *Martingales in Banach spaces*
- 156 C. T. C. Wall *Differential topology*
- 157 J. C. Robinson, J. L. Rodrigo & W. Sadowski *The three-dimensional Navier–Stokes equations*
- 158 D. Huybrechts *Lectures on $K3$ surfaces*
- 159 H. Matsumoto & S. Taniguchi *Stochastic analysis*
- 160 A. Borodin & G. Olshanski *Representations of the infinite symmetric group*
- 161 P. Webb *A course in finite group representation theory*
- 162 C. J. Bishop & Y. Peres *Fractals in probability and analysis*
- 163 A. Bovier *Gaussian processes on trees*

Library of Congress Cataloging in Publication Data

Names: Borodin, Alexei. | Olshanskiĭ, G. I. (Grigori I.)

Title: Representations of the infinite symmetric group / Alexei Borodin, Massachusetts Institute of Technology, Grigori Olshanskiĭ, Institute for Information Transmission Problems of the Russian Academy of Sciences and National Research University Higher School of Economics, Moscow.

Description: Cambridge : Cambridge University Press, [2017] | Series: Cambridge studies in advanced mathematics ; 160 | Includes bibliographical references and index.

Identifiers: LCCN 2016025925 | ISBN 9781107175556

Subjects: LCSH: Hopf algebras. | Algebraic topology. | Representations of groups. | Symmetry groups.

Classification: LCC QA613.8 .B67 2017 | DDC 515/.22–dc23

LC record available at <https://lcn.loc.gov/2016025925>

ISBN 978-1-107-17555-6 Hardback

Contents

Introduction	<i>page 1</i>
 PART ONE SYMMETRIC FUNCTIONS AND THOMA'S THEOREM	
1 Preliminary Facts From Representation Theory of Finite Symmetric Groups	13
1.1 Exercises	19
1.2 Notes	20
2 Theory of Symmetric Functions	21
2.1 Exercises	31
2.2 Notes	36
3 Coherent Systems on the Young Graph	37
3.1 The Infinite Symmetric Group and the Young Graph	37
3.2 Coherent Systems	39
3.3 The Thoma Simplex	41
3.4 Integral Representation of Coherent Systems and Characters	44
3.5 Exercises	46
3.6 Notes	46
4 Extreme Characters and Thoma's Theorem	47
4.1 Thoma's Theorem	47
4.2 Multiplicativity	48
4.3 Exercises	51
4.4 Notes	54
5 A Toy Model (the Pascal Graph) and de Finetti's Theorem	55
5.1 Exercises	60
5.2 Notes	61

6	Asymptotics of Relative Dimension in the Young Graph	62
6.1	Relative Dimension and Shifted Schur Polynomials	62
6.2	The Algebra of Shifted Symmetric Functions	65
6.3	Modified Frobenius Coordinates	66
6.4	The Embedding $\mathbb{Y}_n \rightarrow \Omega$ and Asymptotic Bounds	68
6.5	Integral Representation of Coherent Systems: Proof	71
6.6	The Vershik–Kerov Theorem	74
6.7	Exercises	75
6.8	Notes	80
7	Boundaries and Gibbs Measures on Paths	82
7.1	The Category \mathcal{B}	82
7.2	Projective Chains	84
7.3	Graded Graphs	86
7.4	Gibbs Measures	88
7.5	Examples of Path Spaces for Branching Graphs	90
7.6	The Martin Boundary and the Vershik–Kerov Ergodic Theorem	91
7.7	Exercises	93
7.8	Notes	96
 PART TWO UNITARY REPRESENTATIONS		
8	Preliminaries and Gelfand Pairs	101
8.1	Exercises	110
8.2	Notes	113
9	Classification of General Spherical Type Representations	114
9.1	Notes	120
10	Realization of Irreducible Spherical Representations of ($S(\infty) \times S(\infty), \text{diag} S(\infty)$)	121
10.1	Exercises	126
10.2	Notes	128
11	Generalized Regular Representations T_z	130
11.1	Exercises	139
11.2	Notes	140
12	Disjointness of Representations T_z	141
12.1	Preliminaries	141
12.2	Reduction to Gibbs Measures	143
12.3	Exclusion of Degenerate Paths	144

	<i>Contents</i>	vii
12.4	Proof of Disjointness	146
12.5	Exercises	149
12.6	Notes	149
