- Aitken's theorem, 63
- algebra Sym of symmetric functions, 22
- approximation theorem, 73
- Bernoulli measure, 56
- binomial formula (for Schur polynomials), 32
- bisymmetric group, 5
  - finite, 6
  - infinite, 109
- Bochner's theorem, 89
- boundary (of graded graph), 87
- boundary measure, 44
- boundary of a chain, 85
- branching graph, 86
- Bratteli diagram, 86
- canonical projection, 130
- Cauchy determinant, 27
- Cauchy's identity, 27
- central function, 16
- central measure, *see* Gibbs measure
- character, 3, 17
  - extreme, 3
- characteristic map, 30
- Choquet's theorem, 49
- class function, *see* central function
- coherent family of measures, 83
- coherent system, 39
  - support, 143
- commutant, 101
- compositions
  - graph of, 95
- comultiplication, 34
- content power sums, 76
- corner (of Young diagram), 77
  - inner, 77
  - outer, 77
- cotransition probabilities, 46, 143
- cycle structure, 14, 44
- cyclic span, 101
- cyclic vector, 101
- cylinder set, 88, 131
- de Finetti's theorem, 56, 61, 90
- degenerate path, 144
- differential poset, 46
- dimension (of vertex in a graded graph), 87
- direct integral, 116
- disjoint representations, 115
- dual Cauchy identity, 32
- dual Jacobi–Trudi formula, 32
- entrance law, 90
- ergodic measure, 60
- Ewens measure, 133
- extreme point, 47
- fat hook, 144
- Ferrers diagram, *see* Young diagram
- Frobenius character formula, 30
- Frobenius coordinates, 13
  - modified, 66
- Frobenius reciprocity, 15
- Frobenius–Schur function, 79
- functional equation (for characters), 19
- fundamental cocycle, 132
- Gelfand pair, 106, 107
  - spherical representation, 108
- Gelfand–Naimark–Segal construction, 104

- Gelfand–Tsetlin graph, 87  
 Giambelli formula, 28  
 Gibbs measure, 89  
 graded graph, 86  
   multiplicative, 95  
   similar, 94  
 harmonic function (in Vershik–Kerov sense), 40  
 hook formula, 14  
 hook length, 14  
 infinite symmetric group, 37  
 infinite tensor product, 122  
 integral representation of characters, 45  
 interlacing coordinates, 77  
 invariant subspace, 101  
 irreducible representation, 101  
 Jacobi–Trudi formula, 28  
 Kerov’s interlacing coordinates, 77  
 Kingman dimension, 94  
 Kingman graph, 94, 95  
 Kingman multiplicity, 94  
 Kolmogorov extension theorem, 89  
 levels (of graded graph), 86  
 lexicographic order (on partitions), 23  
 limit object, 83  
 link, *see* Markov kernel  
 Littlewood–Richardson coefficients, 33  
 Markov growth process, 143  
 Markov kernel, 82  
 Martin boundary, 91  
 Martin compactification, 91  
 measurable space, 82  
 measures  
   absolutely continuous, 115  
   disjoint, 115  
   equivalent, 115  
 monomial matrix, 127  
 monotone path, 87  
 multiplicative form (of partition), 48  
 Murnaghan–Nakayama rule, 29  
 parity function, 125  
 partition, 13  
   conjugate, 24  
   of a set, 94  
 Pascal graph, 55, 87, 95  
 Pascal pyramid, 60  
 path space, 89  
 Pieri’s formula, 32, 63  
 Plancherel measure, 18  
 positive definite function, 15, 103  
 positive definite kernel, 103  
 projective chain, 84  
 projective limit, 88  
 projective system, 83  
 Radon–Nikodým derivative, 115, 133  
 Radon–Nikodým theorem, 115  
 regular functions  
   algebra of, 70  
 regular path, 92  
 regular sequence (of vertices), 92  
 relative dimension, 62, 87  
 representation  
   admissible, 129  
   biregular, 121  
   generalized regular, 8, 134  
   regular, 7  
   spherical, 108  
   spherical type, 114  
 rim hook, 29  
 ring theorem, 52  
 Schur polynomial, 26  
   shifted, 64  
 Schur symmetric function, 27  
 shifted Schur function, 65  
 shifted symmetric functions, 65  
 sign rule, 125  
 spectral decomposition, 115  
 spectral measure, 115  
 spherical function, 108  
 spherical vector, 108  
 stabilizing sequence (of vectors), 122  
 standard Borel space, 82  
 standard Young tableau, 15, 90  
   infinite, 90  
 Stirling number, 140  
 stochastic matrix, 38  
 strip  
   horizontal, 32  
   vertical, 32  
 strong law of large numbers (for Young graph), 92  
 subrepresentaion, 101  
 super power sums, 35  
 supersymmetric functions, 35

160

*Index*

symmetric functions, 21  
  elementary, 23  
  homogeneous, 24  
  monomial, 22  
symmetric polynomials, 21  
  
Thoma measure, 75  
Thoma parameters, 48  
Thoma simplex, 41  
Thoma's theorem, 4, 47  
transition function, 83  
transition probability, 143

Vershik–Kerov ergodic theorem, 92  
Vershik–Kerov theorem, 74  
virtual permutation, 131  
  
Young branching rule, 15  
Young diagram, 13, 27  
  hook, 28  
  infinite, 90  
  transposed, 13  
Young graph, 37, 55, 87, 92, 95  
  relative dimension, 62  
Young–Fibonacci graph, 97
