

Contents

<i>Preface</i>	<i>page</i> ix
<i>Acknowledgements</i>	xv
1 • The Universe and the Principle of Relativity	1
The Sky at Night	1
Early Cosmologies	5
The Copernican Revolution	7
Galileo: Father of Modern Science	9
The Earth from a Billion Miles	11
Newton's Laws of Motion	12
Nineteenth-Century Certainties	13
Quantum Mechanics	15
Einstein's Special Theory of Relativity	17
Einstein's General Theory of Relativity	20
Can We 'Feel' the Consequences of Relativity?	21
Hubble's Deep Field Views	23
Conclusions	24
2 • Biological Scales and Levels	30
The Sense of Scale	30
Scales and Levels	32
Atoms and Ions	35
Molecules	39
Molecules as Systems	42
Networks	46
Organelles	47
Cells	48
Tissues	51
Organs	54
Whole-Body Systems	55
The Organism as a Whole	63
Beyond Organisms	64
Conclusions	64

3 • Biological Networks	69
Networks are not Diagrams!	69
How Do Complex Structures Form?	74
Biological Oscillators and Attractors	77
Circadian Rhythm	78
Cardiac Rhythm	83
Gene Expression Patterns	87
Synchronisation of Oscillators: Brainwaves	89
Chance at the Heart of the Cell	91
Conclusions	93
4 • Nature and Origin of Cells	97
The Medical Histology Class	97
Cells as Carriages	98
The Simplest Cells: Bacteria and Archaea	102
Bacteria	102
Archaea	106
Eukaryotes: The Largest Organisms but the Smallest	
Domain	107
The Cell Cycle	108
Meiosis	112
RNA and Other Early Worlds?	113
How Cells Form Tissues	114
The Nearly Cells: Viruses	115
Tree, Networks or Rings of Life?	115
The Death of Cells	117
Conclusions	118
5 • Blind Chance and Natural Selection	121
Charles Darwin and his Predecessors	121
Darwin on Lamarckism	124
The Rise of Neo-Darwinism Leading to the Modern	
Synthesis	126
Evolution and Genetics	129
The Modern Synthesis	130
Schrödinger and <i>What is Life?</i>	134
Neo-Darwinism and the Central Dogma	136
The Language of Neo-Darwinism	138

CONTENTS

vii

The Language of Neo-Darwinism as a Whole	150
Conclusions	152
6 • Biological Relativity	160
A Personal Journey	161
Ultimate Reductionism: Mathematics?	163
Introduction to Spinoza	164
Spinoza's Way Out of the Cartesian Paradigm	165
The Essence of Biological Relativity	168
Conceptual and Empirical Interpretations	171
Open and Closed Systems	173
Why Spinoza's Constraint is not Sufficient	174
Forms of Causation	176
Conclusions	181
7 • Dancing Nucleotides: Natural Genetic Engineering	187
Pipes and Templates	187
Summary of the Problem	189
The Weismann Barrier is Relative, not Absolute	191
Genetic Variation is not Random	194
Misinterpretations of the Central Dogma	197
Mobile Genetic Elements	200
Natural Genetic Engineering: Genome Reorganisation	201
Significance of Symbiogenesis and Co-operation	204
Conclusions	207
8 • Epigenetics and a Relativistic Theory of Evolution	214
Epigenetics Viewed from Physiological High Ground	214
Epigenetic and Other Lamarckian Inheritance	216
Niche Construction and the Active Role of Organisms	222
The Origin of Species?	224
Are Genes Followers Rather than Leaders?	228
Isn't a Lot of DNA 'Selfish', 'Parasitic'?	228
The Speed of Evolution	229
Respecting the Principle of Biological Relativity	232
A Biological Relativistic View of Evolution	232
Conclusions	237

9 · The Relativity of Epistemology: The Meaning of It All	247
Why? Questions and Goals	248
The Third Way	250
Science and Humanity	251
Science and Common Sense	252
Is Naive Theism the Only Alternative?	254
Contextual Logic	256
Selfish Genes and Altruism	260
Relativity of Epistemology	262
Ultimate Purpose?	264
10 · Postscript	268
<i>Glossary</i>	270
<i>Index</i>	276

A colour plate section can be found between pages 174 and 175.
