1	Introduction	<i>page</i> ix
1.1	Motivation	ix
1.2	Roots	xii
1.3	Goals	xiii
1.4	Organization	xvi
1.5	Acknowledgements	xviii
I	The Geometry of Monoids	1
1	Basics on monoids	1
1.1	Limits in the category of monoids	1
1.2	Monoid actions	7
1.3	Integral, fine, and saturated monoids	10
1.4	Ideals, faces, and localization	15
1.5	Idealized monoids	20
2	Finiteness, convexity, and duality	22
2.1	Finiteness	22
2.2	Duality	34
2.3	Monoids and cones	39
2.4	Valuative monoids and valuations	59
2.5	Simplicial monoids	62
3	Affine toric varieties	65
3.1	Monoid algebras and monoid schemes	65
3.2	Monoid sets and monoid modules	67
3.3	Faces, orbits, and trajectories	74
3.4	Local geometry of affine toric varieties	79
3.5	Ideals in monoid algebras	82
3.6	Completions and formal power series	86
3.7	Abelian unipotent representations	90

4	Actions and homomorphisms	94
4.1	Local and logarithmic homomorphisms	94
4.2	Exact homomorphisms	98
4.3	Small, Kummer, and vertical homomorphisms	109
4.4	Toric Frobenius and isogenies	119
4.5	Flat and regular monoid actions	126
4.6	Integral homomorphisms	140
4.7	The structure of critically exact homomorphisms	149
4.8	Saturated homomorphisms	158
4.9	Saturation of monoid homomorphisms	172
4.10	Homomorphisms of idealized monoids	177
II	Sheaves of Monoids	184
1	Monoidal spaces	184
1.1	Generalities	184
1.2	Monoschemes	190
1.3	Some universal constructions	199
1.4	Quasi-coherent sheaves on monoschemes	201
1.5	Proj for monoschemes	206
1.6	Separated and proper morphisms	213
1.7	Monoidal transformations	221
1.8	Monoidal transformations and exactification	227
1.9	Monoschemes, toric schemes, and fans	235
1.10	The moment map	239
2	Charts and coherence	249
2.1	Charts	249
2.2	Construction and comparison of charts	251
2.3	Exact and neat charts	255
2.4	Charts for morphisms	259
2.5	Constructibility and coherence	262
2.6	Coherent sheaves of ideals and faces	266
III	Logarithmic Schemes	270
1	Log structures and log schemes	270
1.1	Log and prelog structures	270
1.2	Log schemes and their charts	274
1.3	Idealized log schemes	280
1.4	Zariski and étale log structures	282
1.5	Log points and dashes	285
1.6	Compactifying log structures	288
1.7	DF log structures	293

<i>Contents</i>		vii
1.8	Normal crossings and semistable reduction	297
1.9	Coherence of compactifying log structures	305
1.10	Hollow and solid log structures	307
1.11	Log regularity	318
1.12	Frames for log structures	327
2	Morphisms of log schemes	330
2.1	Fibered products of log schemes	331
2.2	Exact morphisms	336
2.3	Immersions and small morphisms	343
2.4	Inseparable morphisms and Frobenius	346
2.5	Integral and saturated morphisms	352
2.6	Log blowups	356
IV	Differentials and Smoothness	361
1	Derivations and differentials	362
1.1	Derivations and differentials of log rings	362
1.2	Derivations and differentials of log schemes	369
2	Thickenings and deformations	379
2.1	Thickenings and extensions	379
2.2	Differentials and deformations	383
2.3	Fundamental exact sequences	385
3	Logarithmic smoothness	389
3.1	Definitions and examples	389
3.2	Differential criteria for smoothness	400
3.3	Charts for smooth morphisms	403
3.4	Unramified morphisms and the conormal sheaf	411
3.5	Smoothness and regularity	417
4	Logarithmic flatness	423
4.1	Definition and basic properties	423
4.2	Flatness and smoothness	431
4.3	Flatness, exactness, and integrality	435
V	Betti and de Rham Cohomology	442
1	Betti realizations of log schemes	443
1.1	The space X_{an}	443
1.2	The space X_{log}	446
1.3	Local topology of X_{log}	457
1.4	\mathcal{O}_X^{log} and the exponential map	460
2	The de Rham complex	467
2.1	Exterior differentiation and Lie bracket	467
2.2	De Rham complexes of monoid algebras	471

2.3	Filtrations on the de Rham complex	477
3	Analytic de Rham cohomology	494
3.1	An idealized Poincaré lemma	494
3.2	The symbol in de Rham cohomology	499
3.3	Ω_X^{log} and the Poincaré lemma	501
4	Algebraic de Rham cohomology	506
4.1	The Cartier operator and the Cartier isomorphism	507
4.2	Comparison theorems	518
