<b>Preface</b>	<i>page</i> ix
<b>Nomenclature</b>	xiii
<b>Part I Statistical mechanics</b>	<b>1</b>
<b>1 Introduction</b>	3
1.1 Thermodynamics	4
<b>2 Principles of statistical mechanics</b>	9
2.1 The ideal gas in one dimension	9
2.2 The micro-canonical ensemble	13
2.3 The canonical ensemble and the Gibbs measure	19
2.4 Non-ideal gases in the canonical ensemble	22
2.5 Existence of the thermodynamic limit	24
2.6 The liquid–vapour transition and the van der Waals gas	28
2.7 The grand canonical ensemble	31
<b>3 Lattice gases and spin systems</b>	33
3.1 Lattice gases	33
3.2 Spin systems	34
3.3 Subadditivity and the existence of the free energy	36
3.4 The one-dimensional Ising model	37
3.5 The Curie–Weiss model	39
<b>4 Gibbsian formalism for lattice spin systems</b>	49
4.1 Spin systems and Gibbs measures	49
4.2 Regular interactions	52
4.3 Structure of Gibbs measures: phase transitions	59
<b>5 Cluster expansions</b>	73
5.1 High-temperature expansions	73
5.2 Polymer models: the Dobrushin–Kotecký–Preiss criterion	76
5.3 Convergence of the high-temperature expansion	82
5.4 Low-temperature expansions	88

<b>Part II</b>	<b>Disordered systems: lattice models</b>	<b>95</b>
<b>6</b>	<b>Gibbsian formalism and metastates</b>	<b>97</b>
6.1	Introduction	97
6.2	Random Gibbs measures and metastates	99
6.3	Remarks on uniqueness conditions	106
6.4	Phase transitions	107
6.5	The Edwards–Anderson model	109
<b>7</b>	<b>The random-field Ising model</b>	<b>111</b>
7.1	The Imry–Ma argument	111
7.2	Absence of phase transitions: the Aizenman–Wehr method	118
7.3	The Bricmont–Kupiainen renormalization group	125
<b>Part III</b>	<b>Disordered systems: mean-field models</b>	<b>159</b>
<b>8</b>	<b>Disordered mean-field models</b>	<b>161</b>
<b>9</b>	<b>The random energy model</b>	<b>165</b>
9.1	Ground-state energy and free energy	165
9.2	Fluctuations and limit theorems	169
9.3	The Gibbs measure	175
9.4	The replica overlap	180
9.5	Multi-overlaps and Ghirlanda–Guerra relations	182
<b>10</b>	<b>Derrida’s generalized random energy models</b>	<b>186</b>
10.1	The standard GREM and Poisson cascades	186
10.2	Models with continuous hierarchies: the CREM	195
10.3	Continuous state branching and coalescent processes	207
<b>11</b>	<b>The SK models and the Parisi solution</b>	<b>218</b>
11.1	The existence of the free energy	218
11.2	2nd moment methods in the SK model	220
11.3	The Parisi solution and Guerra’s bounds	227
11.4	The Ghirlanda–Guerra relations in the SK models	238
11.5	Applications in the $p$ -spin SK model	240
<b>12</b>	<b>Hopfield models</b>	<b>247</b>
12.1	Origins of the model	247
12.2	Basic ideas: finite $M$	250
12.3	Growing $M$	257
12.4	The replica symmetric solution	265
<b>13</b>	<b>The number partitioning problem</b>	<b>285</b>
13.1	Number partitioning as a spin-glass problem	285
13.2	An extreme value theorem	287
13.3	Application to number partitioning	289
	<b>References</b>	<b>297</b>
	<b>Index</b>	<b>309</b>
