Subject Index

- antisite-related defects
 - (in) GaAs, 351-369, 375-386
 - (in) GaP, 467-470
- band discontinuities (tuning with doping), 52-54
- bound excitons
 - complex defects in GaP, 443-448
 - (in) electric fields, 117-120
 - (in) MBE GaAs, 549-554
- carbon in silicon
 - effect on O precipitation, 30-32, 201-204
 - interaction with O and N, 173-178
 - interstitial C complexes and reactions, 79-98
- channeling, H location in Si:B, 259-270
- cluster calculations, O in Si, 179-184
- compensation in n-type GaAs
 - EXAFS studies, 519-523
 - IR studies, 543-545
- crystal growth, dislocation generation, 125-128
- defect reactions
 - C related complexes in Si, 85-91
 - defect complexes in heat treated Si:Al, 209-213
 - influence of O and B on radiation defects in Si, 167-172
 - O aggregation in Si, 25-36
- diffusion
 - effect of vacancies in GaAs, 463-466
 - enhanced superlattice interdiffusion, 595-612
 - H in Si, 229-240, 285-290
 - implanted As in Si, 219-222
 - O dimers, 179-183
 - O in Si, 27, 30
 - Si and P in GaAs, 463-466
 - uniaxial stress determination, 66-69
- dislocations
 - decoration in GaAs, 411-414
 - extrinsic gettering in Si, 121-124
 - (in) Ge-Si strained epilayers, 623-628
 - (in) InGaAs/GaAs heterostructures, 633-636
 - introduction during CZ growth, 125-128
 - mechanism for formation of hexagonal Si, 133-138
 - PL intensity maps, 415-421
 - strain elimination during Si epitaxy, 641-644
 - ZnSe/ZnS_xSe_{1-x} superlattices, 629-632
- DLTS
 - comparison of annealing techniques for GaAs, 509-512
 - DX centers in double heterostructures, 579-584
 - DX centers in GaAsP:Te, 589-593
 - EL2 dependence on growth conditions, 397-401
 - H neutralization of double donors in Si, 241-246
 - H passivation of deep levels in III-V's, 323-324
 - InP defects, 491-494
 - interstitial C related complexes, 79-91
 - metastable defects, 37-46
 - pre-amorphized p+n junctions in Si, 161-167
 - pressure studies of DX centers, 579-588
 - radiation damage in Si, 167-172
- donors in III-V's
 - DX centers, 561-572
 - ODMR of donors in AlGaAs, 555-560
- DX centers
 - composition dependence of properties, 563-566
 - (in) double heterostructures, 579-584
 - EXAFS studies, 525-526
 - GaAsP:Te, 589-592
 - heavily doped GaAs, 568-569
 - IR of GaAs:Si, 546
 - (in) MODFETS, 561-563
 - pressure studies, 533-538, 573-578, 585-588

- EBIC, buried defects in
 - Si, 121-124
- EL2
 - alternative model, 405-408
 - dependence on OMVPE growth conditions, 397-400
 - distribution in wafer, 368-369
 - ENDOR structure, 363-370
 - (in) $\text{Ga}_{1-x}\text{Al}_x\text{As}$, 401-403
 - intrinsic defect properties, 351-362
 - midgap defects from heat-treatment, irradiation and deformation, 387-392
 - symmetry from phonon transmission, 393-396
 - theory of levels and excitation energies, 375-386
- electric fields, effect on luminescence, 117-120
- electron irradiation
 - effect of O and B in Si, 167-172
 - Frenkel pairs in ZnSe, 3-12
 - InSb, 487-490
 - interstitial C related complexes, 79-98
 - intrinsic defects in GaAs, 351-362
- electron microscopy
 - Au-Si interfaces, 153-159
 - (of) extended defects in III-V's, 495-498
 - GaAs on Ge defects, 617-622
 - H related damage, 247-252
 - hexagonal Si, 133-138
 - InGaAs/GaAs heterostructures, 633-636
 - misfit dislocations in Ge-Si strained epilayers, 623-628
 - ordering in (GaIn)P on GaAs, 637-640
 - strain relaxation in $\text{ZnSe}/\text{ZnS}_x\text{Se}_{1-x}$ superlattices, 629-632
 - transition metal precipitates in Si, 215-218
- ENDOR
 - deep defects in GaAs, 363-374
 - thermal donors, 185-188
- epilayers
 - dopant control during Si epitaxy, 641-644
 - GaAs on Ge, 617-622
 - InGaAs/GaAs heterostructures, 633-636
 - MeV He implantation in GaInAs/GaAs, 499-503
 - misfit dislocations, 623-628
- EPR
 - interstitial C-interstitial O complex in Si, 93-98
 - interstitial C-substitutional C pair in Si, 79-84
- EXAFS, local impurity structure, 515-526
- extended defects
 - effect on GaAs FET's, 457-462
 - H_2 reactive ion etching of Si, 247-252
- Fermi level effect
 - implant activation efficiency, 483-486
 - superlattice disordering, 605-612
- gettering
 - microscale O precipitation kinetics, 205-208
 - (by) misfit dislocations, 121-124
 - O precipitates, 197-200
- Hall effect
 - carrier concentration reduction in annealed GaAs, 429-435
 - donor passivation by H, 277-280
- hydrogen in III-V's
 - applications, 320-322
 - (in) as grown crystals, 341-344
 - bound exciton luminescence in GaP, 325-329
 - deep level passivation, 319-320
 - implantation into p+ GaAs, 331-335
 - IR spectroscopy p-type GaAs:Si, 337-340
 - proton implantation into n+ GaAs:Si, 345-348
 - shallow level passivation, 313-323
- hydrogen in silicon
 - chalcogen double donors, neutralization, 241-246
 - channeling B-H complexes, 265-270
 - donor neutralization, 277-284
 - implantation into Schottky diodes, 297-300
