SUBJECT INDEX

- ab initio quantum chemistry, 173
- active and passive oxidation, 173
- aluminum/silicon, 27
- atomic simulations, 155
- barrier layer, 135
- BaTiO₃/SrTiO₃ superlattice, 105
- buffer layer, 123, 191, 209
- cerium oxide films, 191
- cobalt, 85
 - oxide thin films, 129
- complex oxides, 141
- CVD, 129
- defects, 49
- dielectric function, 167
- ellipsometry, 167, 179
- epitaxial, 79, 91, 97, 155, 185, 191
- epitaxy, 115, 123, 203, 209
- Fe/Pd multilayer, 79
- film, 123, 129
- fracture, 197
- front-end processing, 167
- funneling, 49
- giant magnetoresistance (GMR), 91
- growth properties, 197
- heteroepitaxy, 3
- hexaferrite, 197
- high-resolution electron microscopy, 185
- high-temperature superconductor, 185, 209
- homoepitaxy, 15
- Ho₂O₃, 209
- infrared spectroscopy, 179
- in situ*, 27, 97, 135, 141
- internal defects, 49
- ion scattering, 141
- island
 - nucleation, 35
 - size distributions, 35
- Kelvin probe, 73
- kinetic(s), 115
 - Monte-Carlo simulations, 35
 - roughening, 15
- lattice-gas modeling, 173
- LEED, 57
- low temperature, 49
 - epitaxy, 129
- magnetism, 79
- MBE, 3, 123
- mechanical properties, 27
- metal (100)
 - homoepitaxy, 15
- MgO, 155
- MOCVD, 129, 155
- modeling, 173
- MOSFET, 155
- mound formation, 15
- multilayer, 79
- nanoparticles, 97
- nickel oxide, 91
- optical
 - properties, 167
 - reflectivity, 115
- oxidation, 73, 179
- oxide, 115, 155, 179
 - superlattices, 105
 - thin films, 129, 191
- oxygen, 57
 - incorporation, 141
- passive oxidation, 173
- PbTiO₃/SrTiO₃ superlattice, 105
- perovskite-type oxides, 105, 155
- photoelectric effect, 73
- plasma, 179
- processing, 167
- RABiTS, 203
- rare-earth oxide, 203
- reflectivity, 115
- restricted downward funneling, 49
- rhenium, 73
- roll-textured nickel, 203
- ruthenium, 85
- self-affine growth, 15
- Si (100) surface, 173
- silicide, 97
- silicon, 155
 - oxide, 179
- simulations, 155
- single crystals, 91
- solution
 - deposition, 209
 - synthesis, 203
