## Contents

<i>Preface</i>	viii
<b>1 Random variables</b>	1
1.1 Random variables	1
1.2 Cumulative distribution functions	1
1.3 Probability (density) functions	2
1.4 Random vectors	3
1.5 Mean and variance	7
1.6 The multivariate normal distribution	9
1.7 Transformation of random variables	11
1.8 Moment generating functions	13
1.9 The central limit theorem	13
1.10 Chebyshev, Jensen and the law of large numbers	14
1.11 Statistics	16
Exercises	17
<b>2 Statistical models and inference</b>	19
2.1 Examples of simple statistical models	20
2.2 Random effects and autocorrelation	23
2.3 Inferential questions	26
2.4 The frequentist approach	27
2.5 The Bayesian approach	37
2.6 Design	44
2.7 Useful single-parameter normal results	46
Exercises	48
<b>3 R</b>	49
3.1 Basic structure of R	50
3.2 R objects	51
3.3 Computing with vectors, matrices and arrays	54
3.4 Functions	63
3.5 Useful built-in functions	67

vi	<i>Contents</i>	
3.6	Object orientation and classes	68
3.7	Conditional execution and loops	70
3.8	Calling compiled code	73
3.9	Good practice and debugging	75
	Exercises	76
<b>4</b>	<b>Theory of maximum likelihood estimation</b>	<b>79</b>
4.1	Some properties of the expected log likelihood	79
4.2	Consistency of MLE	81
4.3	Large sample distribution of MLE	82
4.4	Distribution of the generalised likelihood ratio statistic	83
4.5	Regularity conditions	85
4.6	AIC: Akaike's information criterion	85
	Exercises	87
<b>5</b>	<b>Numerical maximum likelihood estimation</b>	<b>89</b>
5.1	Numerical optimisation	89
5.2	A likelihood maximisation example in R	100
5.3	Maximum likelihood estimation with random effects	105
5.4	R random effects MLE example	109
5.5	Computer differentiation	116
5.6	Looking at the objective function	127
5.7	Dealing with multimodality	130
	Exercises	130
<b>6</b>	<b>Bayesian computation</b>	<b>133</b>
6.1	Approximating the integrals	133
6.2	Markov chain Monte Carlo	135
6.3	Interval estimation and model comparison	149
6.4	An MCMC example: algal growth	154
6.5	Geometry of sampling and construction of better proposals	158
6.6	Graphical models and automatic Gibbs sampling	168
	Exercises	182
<b>7</b>	<b>Linear models</b>	<b>184</b>
7.1	The theory of linear models	185
7.2	Linear models in R	195
7.3	Extensions	207
	Exercises	210
	<b>Appendix A Some distributions</b>	<b>213</b>
A.1	Continuous random variables: the normal and its relatives	213
A.2	Other continuous random variables	215
A.3	Discrete random variables	217

<i>Contents</i>		vii
<b>Appendix B Matrix computation</b>		219
B.1 Efficiency in matrix computation		219
B.2 Choleski decomposition: a matrix square root		221
B.3 Eigen-decomposition (spectral-decomposition)		224
B.4 Singular value decomposition		230
B.5 The QR decomposition		231
B.6 Sparse matrices		232
<b>Appendix C Random number generation</b>		233
C.1 Simple generators and what can go wrong		233
C.2 Building better generators		237
C.3 Uniform generation conclusions		239
C.4 Other deviates		240
<i>References</i>		241
<i>Index</i>		245
