ACKNOWLEDGMENTS

Figs. 5 and 6 are reproduced in modified form from the *Proceedings of the Royal Society*, and Figs. 2, 8 and 9 from the *Proceedings of the Physical Society*. Plate 7 is taken, by permission of the Controller of H.M. Stationery Office, from *Applications of the Cathode Ray Oscillograph in Radio Research*. I am also indebted to the Council of Trinity College, Cambridge, for permission to reproduce a portrait of James Clerk Maxwell; to the British Broadcasting Corporation for a photograph of the new Droitwich transmitting station; to Sir Oliver Lodge for the loan of a portrait of Heinrich Hertz; to Dr Erwin Schliephake of Giessen University, Germany, for the two X-ray photographs reproduced as Plate 6; and to Professor Størmer of Oslo for permission to reproduce one of his many fine photographs of the Aurora Borealis. For much other personal assistance, generously given, I take this opportunity of expressing my thanks.

A. W. H.

CONTENTS

I	PRELUDE	<i>page</i> 1
II	FROM PROPHECY TO PROOF	4
	A mathematician's pen; radio the missing link between light and electricity; Maxwell's prophecy; characteristics of waves generally; a vibrating source necessary; alternating electric currents; Hertz the discoverer of radio; a scale relationship—ripples and sea rollers, light and radio; some properties of radio deduced; differences between long and short waves	
III	RADIO ROUND THE WORLD	25
	Marconi; the "earthed" aerial; first practical applications; the Atlantic spanned; problem of radio's world travel; an abortive solution; a "mirror" in the sky suggested; need not be solid; discovered by Professor Appleton	
IV	UP IN THE SKY	50
	The watch on the sky mirror; second mirror above the first; their day and night movements; changes in their "strength"; winter and summer changes; the work of the radio mirrors; short waves use the second mirror; the short wave renaissance; long delayed echoes; an unsolved mystery	
	NOTE: for the scientifically minded— the fine structure of the sky mirrors	72
V	THE SUN CALLS THE TUNE	74
	Spots on the sun; the eleven-year cycle; its connection with world weather; with magnetic storms and aurorae; with radio reception; effect on different classes of wave-length; nature of the sun's influence; possible explanations; lessons of the solar eclipses; an expedition to the Arctic; the problem solved; thunderstorms and atmospheric

CONTENTS

VI	THE FUTURE AND ULTRA-SHORT WAVES	<i>p.</i> 103
	Limits of broadcasting progress; the B.B.C.'s Empire problems; ultra-short and micro waves arrive; the radio range extended; other kinds of "electromagnetic" waves; greater message-carrying power of the new waves; a substitute for submarine cables; some Empire possibilities	
VII	TELEVISION	128
	The television problem stated; practical development by Baird; the new television; how ultra-short waves help; an American alternative	
VIII	RADIO AND MEDICINE	145
	Cooking an egg with ultra-short waves; an internal hot poultice; trial and achievement; medical prospects; an explanation suggested	
IX	RADIO AND SAFETY AT SEA	154
	Some early benefits; a home lesson in direction-finding; radio beacons; the sky mirrors intervene; the scientists reply; collision-preventing signals; the new navigation	
X	RADIO IN WAR	168
	The secrecy problem; lessons of the Great War; a partial solution for shore-to-ship communication; possible applications of the new micro waves; the Zeebrugge raid up to date; a radio network for open warfare; frontier post communication	
XI	RADIO AND THE WEATHER FORECASTER	179
	Broadcast weather reports; an international venture; atmospheric and the forecaster; an indication of "cold front" movements; plotting the new weather map; television the final stage; up-to-the-minute information offered	
	APPENDIX ON THE RADIO VALVE	187
	INDEX	193

LIST OF ILLUSTRATIONS

1	The new B.B.C. transmitting station at Droitwich	<i>Frontispiece</i>
2	James Clerk Maxwell	<i>facing page 4</i>
3	Heinrich Hertz	15
4	The Marchese Marconi	25
5	Aurora Borealis	70
6	Radiograms illustrating one type of medical treatment with ultra-short radio waves	149
7	Radio direction-finding signal as shown by a cathode-ray tube	163
