

TABLE OF CONTENTS

VOLUME II. COMPARATIVE METEOROLOGY

DEFINITIONS AND EXPLANATIONS OF CERTAIN TECHNICAL TERMS, ETC.	<i>page</i> xix
<i>Chapter I.</i> THE INFLUENCE OF SUN AND SPACE. SOME PRELIMINARY FIGURES	<i>page</i> 1
Solar radiation and sunspots.	
Terrestrial radiation.	
The relation of solar and terrestrial radiation.	
<i>Chapter II.</i> LAND, WATER AND ICE. OROGRAPHIC FEATURES AND OTHER GEOPHYSICAL AGENCIES	<i>page</i> 9
Orographic features.	
The influence of orographic features upon weather.	
Sea-ice and icebergs.	
Ocean-currents.	
Other geophysical agencies.	
Earthquakes and volcanic eruptions.	
Terrestrial magnetism and aurora.	
Atmospheric electricity.	
St Elmo's fire.	
The normal potential gradient.	
<i>Chapter III.</i> THE COMPOSITION OF THE ATMOSPHERE	<i>page</i> 35
Water in the atmosphere.	
Solid particles.	
Smoke.	
Hygroscopic nuclei.	
Clouds in the stratosphere.	
<i>Chapter IV.</i> COMPARATIVE METEOROLOGY: TEMPERATURE	<i>page</i> 45
Seasonal variation.	
Seasonal variation in weekly values.	
Temperature of the sea.	
Difference of temperatures of the sea and air. North Atlantic Ocean, Mediterranean Sea.	
Earth-temperatures.	
The entablatures.	
Monthly and annual maps of temperature.	
Maps of diurnal and seasonal range.	

TABLE OF CONTENTS

Temperatures of the upper air.
 Temperatures in the upper air, with the ranges of pressure,
 at selected levels.
 Mean temperature in the upper air in relation to latitude.
 Diurnal variation of temperature in the upper air.
 Seasonal variation.
 The uniformity of lapse-rate.
 Potential temperature and megadyne temperature.
 Entropy-temperature diagrams.
 Geopotential, level surfaces and height.

Chapter V. COMPARATIVE METEOROLOGY: AQUEOUS VAPOUR . *page 129*

Maps of mean dew-point of the air at sea-level, January and July.
 Absolute and relative humidity for maps.
 Seasonal and diurnal variation of the amount of water-
 vapour in the surface-layer of air.
 The vertical distribution of water-vapour.
 The condensation of vapour.
 Cloud at sea-level. Fog.
 Cloudiness. Monthly and annual maps.
 Rainfall.
 Seasonal variation.
 Diurnal variation.
 Rainfall over the sea.
 Monthly and annual maps.
 Evaporation.
 Irregularities and the difficulty of applying data for stations
 to large areas.
 Measures of annual evaporation.
 Seasonal variation of evaporation.
 Desert regions.
 Evaporation and rainfall: expression in millimetres per day.

Chapter VI. COMPARATIVE METEOROLOGY: PRESSURE AND WIND *page 213*

Monthly maps of the distribution of pressure.
 Geodynamic metres and geodekametres for computation of
 wind.
 Winds on the earth's surface.
 General relation of wind to pressure.
 The equatorial flow westward.
 Maps of prevailing winds over the oceans.
 The trade-winds.
 Monsoons. The seasonal variation of surface-winds.
 The prevailing westerly winds of temperate latitudes.
 The circulations of the polar zones.
 Katabatic winds.
 Pressure in the upper air: maps for January and July.
 Entablatures of the maps of pressure in the upper air.
 Winds in the upper air.
 The reversal of the trade-winds. The anti-trades.
 The normal velocities of the currents in the general circulation.
 The surface-air.
 The geostrophic winds of the upper air.
 Clayton's or Egnell's law of variation of wind with height.

TABLE OF CONTENTS

xi

The diurnal variation of wind and pressure.
 The semi-diurnal variation of pressure.
 The general circulation in relation to rainfall.
 Seasonal changes. Phase-correlations.

*Chapter VII. CHANGES IN THE GENERAL CIRCULATION. RESILIENCE
 OR PLASTICITY page 292*

Mean values.

Monthly means in a new light.
 The normal circulation.

The sequence of changes.

Plasticity and resilience of the circulation.

The general circulation as a plastic structure.

A chronological table of salient meteorological or economic
 events of the historic period with some indications of
 agencies or presumptive causes.

The general circulation as a resilient structure. Periodicity.

Periodicities elicited by the co-ordination and comparison
 of data.

The eleven-year period.

The Brückner cycle.

Periodicities elicited by mathematical analysis.

I. Selected natural cycles verified by harmonic analysis
 or by other examination of the available data.

II. Empirical periods derived from the examination of
 long series of observations by arithmetical manipu-
 lation or by inspection.

The application of periodicity in practical meteorology.

A notable example of prediction by cycle.

Intercorrelation of the elements of the circulation.

Researches by curve-parallels and maps.

Coefficients of correlation.

I. Relations between the synchronous variations of
 local atmospheric structure.

II. Mutual relations between local variations of the
 surface-circulation and the contemporaneous varia-
 tion of the elements elsewhere.

III. The larger correlations between conditions at selected
 centres and subsequent weather elsewhere.

IV. Correlation between external influences and syn-
 chronous local variations in the general circulation.

V. Sunspots and solar constant.

Additional information: weather in historic times.

*Chapter VIII. TRANSITORY VARIATIONS OF PRESSURE. CYCLONES
 AND ANTICYCLONES page 341*

The characters of anticyclones and cyclones.

Entities which travel.

The barogram and its relation to travelling cyclones.

Hurricanes.

Cyclonic depressions of the temperate zone.

Barograms.

The travel of cyclonic depressions.

TABLE OF CONTENTS

Tornadoes.
 Dust-whirls, whirlwinds and waterspouts.
 The removal of air.
 The origin and travel of hurricanes and cyclonic depressions.
 Tracks of hurricanes and cyclonic depressions.
 Zones of barometric disturbance.
 Isanakatabars.
 The mean for a month in relation to normal distribution and
 isochronous charts.
 Transitory variations of weather.
 The embroidery of the barogram.

Chapter IX. ANALYSIS OF CYCLONIC DEPRESSIONS page 381

“Weather Forecasting.”
 Looking back on the analysis.
 The relation of the surface to the upper air.
 Anticyclones.
 Concerning cols.

Chapter X. NOTES AND SUPPLEMENTARY TABLES page 401

1. The solar constant.
2. The duration of snow-cover.
3. The Antarctic continent.
4. Arctic ice.
5. Volcanic eruptions since 1914.
6. Atmospheric electricity and thunder-storms. Diurnal varia-
 tion.
7. The upper atmosphere. Ozone. The Heaviside-Kennelly
 layer.
8. Composition of the atmosphere.
9. Dust-storms.
10. Supersaturated air in clouds.
11. Diurnal variation of temperature of sea and air at the surface.
12. Desert plants.
13. Weather conditions in Greenland.
14. Additional particulars of the conditions of the upper air.
15. Visibility and fog.
16. Cloud in the Arctic.
17. Surface-winds.
18. Normal isobars at high levels.
19. Density in the upper air over England.
20. Long-period records.
21. Rate of travel of cyclones and anticyclones.
22. Additional information about tornadoes.
23. Tropical hurricanes: additional bibliography.
24. Bibliography of meteorological charts.
25. Bibliography of upper air data.

Items omitted from the original text on revision *page 452*

Index *page 453*
