

Cambridge University Press

978-1-107-49296-7 - The Bloch–Kato Conjecture for the Riemann Zeta Function: London
Mathematical Society Lecture Note Series: 418

Edited by John Coates, A. Raghuram, Anupam Saikia and R. Sujatha

Table of Contents

[More information](#)

Contents

<i>List of contributors</i>	page vii
<i>Preface</i>	viii
1 Special Values of the Riemann Zeta Function: Some Results and Conjectures	
<i>A. Raghuram</i>	1
2 K-theoretic Background	
<i>R. Sujatha</i>	22
3 Values of the Riemann Zeta Function at the Odd Positive Integers and Iwasawa Theory	
<i>John Coates</i>	45
4 Explicit Reciprocity Law of Bloch–Kato and Exponential Maps	
<i>Anupam Saikia</i>	65
5 The Norm Residue Theorem and the Quillen-Lichtenbaum Conjecture	
<i>Manfred Kolster</i>	97
6 Regulators and Zeta-functions	
<i>Stephen Lichtenbaum</i>	121
7 Soulé’s Theorem	
<i>Stephen Lichtenbaum</i>	130
8 Soulé’s Regulator Map	
<i>Ralph Greenberg</i>	140
9 On the Determinantal Approach to the Tamagawa Number Conjecture	
<i>T. Nguyen Quang Do</i>	154

vi

Contents

10 Motivic Polylogarithm and Related Classes <i>Don Blasius</i>	193
11 The Comparison Theorem for the Soulé–Deligne Classes <i>Annette Huber</i>	210
12 Eisenstein Classes, Elliptic Soulé Elements and the ℓ-Adic Elliptic Polylogarithm <i>Guido Kings</i>	239
13 Postscript <i>R. Sujatha</i>	297
