ART.	PAGE
PREFACE	v
I. PRELIMINARY NOTIONS.	
1. Independent variables. Interval. Right and left	1
2. Function of one or more variables. Finite. Bounded.	1
II. LIMITS.	
3. Upper and lower bound. Upper and lower limit. Unique limit	2
4. Plurality of limits	3
5. Double and repeated limits. Any repeated limit is a double limit	4
III. CONTINUITY AND SEMI-CONTINUITY.	
6. Upper and lower semi-continuity	6
7. Continuity	7
8. Pointwise discontinuous function	8
IV. DIFFERENTIATION.	
9. The incrementary ratio. Derivates. Differential coefficient. Second and higher differential coefficients; these are repeated limits.	10
10. Differentiation of a function of a function. Differentiation of the sum, difference, product and quotient of two functions. Leibniz's rule	11
V. INDETERMINATE FORMS.	
11. The indeterminate forms $\frac{0}{0}$, $\frac{\infty}{\infty}$, first rule	13
12. Second rule for $\frac{0}{0}$	15
13. The Expansion Theorem	
$f(a+h) = f(a) + hf'(a) + \dots + \frac{1}{n!} h^n \{f^{(n)}(a) + \epsilon\}$	16

VI. MAXIMA AND MINIMA.

ART.	PAGE
14. Maxima and minima of a function of a single variable	17

VII. THE THEOREM OF THE MEAN.

15. The Theorem of the Mean. A differential coefficient assumes all values between its upper and lower bounds. A differential coefficient is one of the limits of differential coefficients in the neighbourhood	18
--	----

VIII. PARTIAL DIFFERENTIATION AND DIFFERENTIALS.

16. Partial differential coefficients of various orders	20
17. Differential	21
18. Sufficient conditions for the existence of a first differential	21
19. The fundamental theorem of differentials	22
20. Second and higher differentials	23
21. Successive differentiation of a function of two or more functions	25
22. Theorem of the Mean for two variables	26
23. The Expansion Theorem	
$f(a+h, b+k) = f(a, b) + df(a, b) + \dots + \frac{1}{n!}(d^n f + E_n)$	27
24. Differentials of a function of more than two variables	30

IX. MAXIMA AND MINIMA FOR MORE THAN ONE VARIABLE.

25. Maxima and minima of a function of two or more variables	31
--	----

X. EXTENSIONS OF THE THEOREM OF THE MEAN.

26. The Remainder Form of Taylor's Theorem ; Lagrange's form	32
27. The Fractional Theorem of the Mean, $\frac{f(b-0) - f(a+0)}{F(b-0) - F(a+0)} = \frac{f'(x_1)}{F'(x_1)}$	33
28. Other Remainder Forms of Taylor's Theorem ; Schlämilch-Roche's, Lagrange's and Cauchy's forms	35
29. The Remainder Form of Taylor's Theorem for several variables	36

XI. IMPLICIT FUNCTIONS.

30, 31. Existence and differentials of an implicit function defined by a single equation	37
32. Equations giving the successive differential coefficients of an implicit function	42
33. Implicit function of two or more variables	42

Cambridge University Press

978-1-107-49362-9 - The Fundamental Theorems of the Differential Calculus

W. H. Young

Table of Contents

[More information](#)

CONTENTS		ix
ART.		PAGE
34.	Equations giving the differentials of such an implicit function	43
35.	Plurality of solutions	43
36.	Change of the dependent into the independent variable ; $\frac{dx}{dy} \cdot \frac{dy}{dx} = 1$	44
37.	Case of uniqueness of the inverse function. Existence of its higher differential coefficients	44
38.	Existence and differentials of implicit functions defined by two or more equations	44
39.	Plurality of solutions. Change of variables	49
40.	The relation $\frac{dy}{dx} = \frac{dy}{dt} \bigg/ \frac{dx}{dt}$	49
XII. ON THE REVERSIBILITY OF THE ORDER OF PARTIAL DIFFERENTIATION.		
41.	Sufficient conditions for the equivalence of f_{xy} and f_{yx}	50
XIII. POWER SERIES.		
42.	Continuity and differentiability of power series inside the region of convergence	52
43.	Continuity on the boundary	55
44.	Differentiability on the boundary	57
XIV. TAYLOR'S THEOREM.		
45—48.	Taylor's Theorem	57
49.	The same for two or more variables	62
APPENDICES.		
I.	Explanatory Notes ($a-\rho$)	64
II.	List of some papers and books quoted by number in this Tract	68
III.	On the expressions and results borrowed from the Theory of Sets of Points used in this Tract	70
