

CONTENTS

Preface, <i>by the Hon. G. L. Parsons</i>	<i>page xi</i>
Foreword, <i>by Lady Parsons</i>	xiii
Some Personal Reminiscences of Sir Charles Parsons, <i>by Lord Rayleigh</i>	xv

PART I

The Compound Steam Turbine and its Theory, as applied to the Working of Dynamo-electric Machines	1
The Application of the Compound Steam Turbine to the Purpose of Marine Propulsion	9
Presidential Address to the Institution of Junior Engineers	15
Motive Power—High-speed Navigation—Steam Turbines	26
The Steam Turbine and its Application to the Propulsion of Vessels	36
Presidential Address to the Engineering Section of the British Association, 1904	41
The Steam Turbine	55
The Steam Turbine on Land and at Sea	61
The Expansive Working of Steam in Steam Turbines	73
The Application of the Marine Steam Turbine and Mechanical Gearing to Merchant Ships	84
Experiments on the Compression of Liquids at High Pressures	91
The Steam Turbine	107
The Marine Steam Turbine from 1894 to 1910	112
Presidential Address to the North-East Coast Institution	119
Presidential Address to the British Association, 1919	131
The Rise of Motive Power and the work of Joule	151
Presidential Address to the Institute of Physics	162

viii	CONTENTS	
Steam Turbines		<i>page</i> 171
Some Investigations into the Cause of Erosion of the Tubes of Surface Condensers		188
Recent Progress in Steam Turbine Plant		193
PART II		
Experiments on Carbon at High Temperatures and under Great Pressures, and in contact with other Substances		205
Some Notes on Carbon at High Temperatures and Pressures		210
Experiments on the Artificial Production of Diamond		214
PART III		
Appendices		
A. The Parsons Auxetophone		241
B. Optical Glass		246
C. List of Papers		250
INDEX		255
