ATOMIC SPECTRA
AND THE VECTOR MODEL

BY
A. C. CANDLER
*Sometime Scholar of Trinity College,
Cambridge*

‘There is one thing I would be glad to ask you. When a mathematician engaged in investigating physical actions and results has arrived at his own conclusions, may they not be expressed in common language as fully, clearly and definitely as in mathematical formulae? If so, would it not be a great boon to such as we to express them so—translating them out of their hieroglyphics that we also might work upon them by experiment.’

Letter from MICHAEL FARADAY to CLERK MAXWELL

CONTENTS

VOLUME II. COMPLEX SPECTRA

<i>Chap. XII.</i>	Displaced terms	<i>page</i> 1
XIII.	Combination of several electrons	9
XIV.	Short periods	21
XV.	Long periods	45
XVI.	Rare earths	75
XVII.	Intensity relations	90
XVIII.	Sum rules and (jj) coupling	122
XIX.	Series limit	158
XX.	Hyperfine structure	166
XXI.	Quadripole radiation	215
XXII.	Fluorescent crystals	228
<i>App. V.</i>	Key to references	247
VI.	Bibliography	248
	A. Books of reference	248
	B. The spectra of the elements	248
	C. The hyperfine structure of the elements	261
<i>Subject index</i>		267
<i>Author index</i>		275

LIST OF PLATES

5. Fluorescent spectrum of a chromium phosphore and a multiplet from the iron arc	<i>facing page 62</i>
6. Absorption spectra of two samarium compounds	86
7. Hyperfine structure of various lines	168
8. Fluorescent spectra of samarium and a multiplet from the iron arc.	240
