

INDEX

- Abbé, Professor Cleveland; ascent of air in the doldrums, 3
 Acceleration, unit of, 13
 Accumulated temperature; *see* Temperature
 Adiabatic lines
 dry air, 60, 114 *et seq.*
 saturated air, 60 (fig. 40), 115 *et seq.* (fig. 48)
 reversible and irreversible, 116
 Aerodromes, clearance of fog from, 223–225
 Agricultural meteorology, provision for, 163–165
 Agricultural produce of Great Britain, value of, 182
 AGRICULTURE AND METEOROLOGY, 181–205
 Agriculture
 definition of good year, 185–187
 fixity of farmer's system, 187–188
 forecasts of weather, 163, 183, 188
 importance of meteorology, 181
 syllabus of questions on relation to meteorology, 180–190
 use of statistics in, 188
 Air
 acceleration of, by falling rain, 228
 ascent of, in the atmosphere, 1, 44, 60, 62, 63
 in cyclones, 78, 94, 95, 127
 in the doldrums, 3
 see also Convexion
 composition of, 112, 139, 140 (fig. 67), 213
 descent of, in anticyclones, 63, 77, 78, 94, 126–128
 flow of, across the equator, 50–52
 across isobars, 95
 from high temperature to low, 44, 45 (fig. 33)
 mixing of, 112, 138, 139
 peculiar ways of, 137–138
 rate of ascent, 92, 126–128
 AIR AND ITS WAYS, 137–156
 Air Ministry, transfer of Meteorological Office to, 162
 Aitken, J., revolving fluid in the atmosphere, 82, 84, 106
 condensation on dust particles, 221
 Alcock, Sir John, track from America, 151
 Alto-cumulus, 34 (pl. xxvi)
 Antarctic continent, meteorological influence of, 120
 Anticyclones
 descent of air in, 63, 77, 78, 94, 126, 127
 distribution of elements in the upper air over England in, 59 (fig. 39)
 formation of, by cold surface air, 71–72
 in the upper air, 29 July, 1908, 72 (figs. 23, 66)
 origin of, 70 *et seq.*, 77
 position of, 68 *et seq.*, 71
 realised entropy in, 124 (fig. 57)
 relation of, to drought in the British Isles, 69
 temperature in the upper air in, 59 (fig. 39), 72, 98, 110, 111 (fig. 47), 116 (fig. 48), 122, 135 (fig. 66), 136, 149
 Anti-trades, 27, 58
 ARTIFICIAL CONTROL OF WEATHER, 216–227
 Ascent and descent of air; *see* Air
 Atmosphere
 composition of, 112, 139, 140 (fig. 67), 213
 kinetic energy of, 119, 151
 mixing of, in the stratosphere, 112
 resilience of the, 96, 104, 125–126
 standard, 15
 stratification of, 84, 104, 113
 structure of, to twenty kilometres, 109–136
 variation of total weight of, 32
 Atmosphere as a heat engine, 109, 114, 119, 120, 124, 150 *et seq.*
 boiler and condenser, 120 *et seq.*
 efficiency, 119, 156
 fly-wheel, 119, 130, 151
 indicator diagram and cycle of operations, 155 (fig. 81)
 kinetic energy, 119, 151
 Atmospheric circulation, horizontal
 comparison of, with fly-wheel, 119, 130 *et seq.*, 151 *et seq.*
 determination of, from distribution of pressure
 at the surface: over the Globe, 41 (pls. xx–xxiii), 68 *et seq.* (pl. xxiv), 131, 143
 in the intertropical belt, 42 *et seq.* (figs. 34, 35)
 in the upper air: at 4000 m., 40 (pls. xiv–xvii), 58, 78 *et seq.*
 at 2000 m., 6000 m. and 10,000 m., 152–153 (fig. 78)
 at 8000 m., 130 *et seq.* (pls. xviii–xix), 153, 154
 determination of, from observations of wind
 at the surface: over the Globe, 143 (figs. 72, 73)
 in the intertropical belt, 26, 42 *et seq.* (figs. 34, 35)
 in the upper air, 55–58 (figs. 36–38)
 Halley's theory of, 42 *et seq.*
 kinetic energy of, 119, 151
 Austin, E. E., correlation of pressure and temperature, 102
 pressure in the upper air, 130
 Ayrton, Mrs, motion of vortex rings, 86
 Ballons-sondes, 147, 148
 Bar, definition of, 8
 value of, 8, 14
 Barometer
 accuracy of readings of, 15
 land, 10, 11 (fig. 1)
 percentage, 15
 reduction of reading of, to sea-level, 10
 scale of graduation of, 10
 correction of, for temperature, 16
 sea, 11, 12 (fig. 2)
 Batavia, 61 (fig. 41), 103, 116 (fig. 48), 131, 132 (fig. 64)

- Beaufort Scale of wind-force, 18
 Bemmelen, W. van, motion of cirrus clouds, 54
 winds in the upper air, 132
 Besançon, G., 146
 Bjerknes, J., theory of polar front, 74
 Bjerknes, V., geopotential, 12, 13
 introduction of absolute units, 12, 14
 map-projection, 28
 theory of polar front, 74, 76
 Blue Hill, rainfall in July, 1921, 65
 Brillouin, M., *Vents Contigus et Nuages*, 76
 British Rainfall Organization, 162
 Brooks, C. E. P., 21
 Brown, H. T., assimilation of carbon by leaves, 186
 Buchan, Alexander, isobars for mean sea-level, 143
 Buys Ballot's law, 40, 44 *et seq.*, 143
 Canada, upper air of, 101, 102
 Carpenter, Alfred, Report on London fogs, 223
 Cave, C. J. P., Cloud photographs (pls. xxv–xxviii); *Structure of the Atmosphere in Clear Weather*, 92, 146, 147, 153, 154, 214
 Centibar, 8, 14
 CHANGE OF UNITS OF MEASUREMENT, 14–18
 Chapman, E. H., Correlation of pressure and temperature, 85
 Chapman, S., Composition of the air, 140
 Chrystal, Prof. G., Analysis of periodic variations, 173
 Circulation of the atmosphere; *see* Atmospheric circulation
 Circulations, local, effect of, on major circulation, 94
 Cirro-cumulus, 34
 Cirrus, 34 (pl. xxv), 54
 CLIMATOLOGICAL STATIONS AND LOCAL AUTHORITIES, 166–169
 Climatology of the Globe, 19–32, 160
 Cloud, geographical distribution of, 143 (pls. xii, xiii)
 Clouds
 Brillouin's explanation of formation, 76
 forms, 34, 213 (pls. xxv–xxviii)
 height of, 148 (fig. 74)
 motion of, 54, 58
 Cloud-temperature, geographical distribution of, 120, 141 (pls. xviii–xxi)
 Coast-line, meteorological importance of, 122, 141, 154
 Colleges, Meteorology for, 1–7
 Colonial observations in M.O. organisation, 161
 Columbus, Christopher, track to America, 151
 Condensation; *see* Water-vapour
 Contessa del Vento, 34 (pl. xxviii)
 Control of weather, 216–227
 Convective equilibrium in the atmosphere, 113, 114, 125
 Convexion, thermal
 conditions for, in the atmosphere, 60 *et seq.*, 113 *et seq.*
 eviction of air, in process of, 80 *et seq.*
 horizontal extent of, 94
 importance of, 98, 99
 in Halley's theory of winds, 42 *et seq.*
 Convexion, thermal—(*contd.*)
 prevalence of, in the atmosphere, 136
 relation of, to distribution of entropy, 113
 separation of loci of eviction and accumulation in, 73, 91–92
 trajectory of air during, 91 (fig. 44)
 types of, 128
 velocity of air during, 92, 126–128
 Correlation coefficient, significance of, 100, 200
 Correlation of
 pressure and temperature in the upper air, 85, 99–102 (fig. 45)
 weather and crops, 202–203 (figs. 95, 96)
 Counter-trades, 27, 58
 Crops
 correlation of, with weather, 200–205
 effect of tempests on, 181, 182
 meteorological conditions favourable for, 186, 187, 189, 204, 205
 rainfall required for, 37
 Cumulo-nimbus, 34 (pl. xxvii)
 Cyclones
 amassing of cold air, as substitute for convexion in, 98
 analysis of, on theory of polar front, 74 *et seq.*
 ceiling of, by stratosphere, 96, 135
 cumulation of air within, 94, 95, 127–128
 density in, over England, 59, 60 (fig. 39)
 disparity of horizontal and vertical dimensions of, 90, 91
 elevation of air in, 94, 95, 127
 eviction of air in, 80 *et seq.*, 95 *et seq.*, 103 *et seq.*
 formation of, 95–98
 identity of, 89
 kinetic energy of, 119, 151
 maintenance of, on convexion theory, 83, 84, 86–88
 passage of, over mountain range, 87
 persistence of, 86–88, 96
 pressure in upper air in, 59, 60 (fig. 39)
 rain-areas in, 94
 realised entropy in upper air in, 124 (fig. 57)
 stationary, 127, 129 (figs. 58–60)
 structure of, 85
 symmetry of, in upper air, 85, 86, 99–102
 temperature in upper air, 59 (fig. 39), 72, 98, 110, 111 (figs. 47 *a–d*), 116 (fig. 48), 122, 135, 136, 149
 theories of
 convexional, 79 *et seq.*, 95 *et seq.*
 eviction, 80 *et seq.*, 90 *et seq.*, 154, 155
 polar-front, 74 *et seq.*
 wave-motion, 76
 Cyclonic depression of July–August, 1917, 92, 119, 127–129 (figs. 58–60), 226
 Cyclonic depression of September 10, 1903, 85
 CYCLONIC DEPRESSIONS OF MIDDLE LATITUDES, 74–89
 NOTES ON OBJECTIONS TO VIEWS ON, 90–102
 Daily Weather Report, 163
 preparation of, 212
 units of, 14, 16
 value of, for agriculture, 163, 183
 Daily weather study, history of, 159

INDEX

 Sunlight, amount required by crops, 186
 Sunshine
 quarterly deviations from normal, 198, 199 (figs. 92, 93)
 weekly average of, in England East, 201 (fig. 94)
 in British Isles, 192, 193 (figs. 84-87)
 Suva, wind-direction at, 26, 51
 Taffara, Contessa del Vento, 34
 Teisserenc de Bort,
 composition of the atmosphere at high levels, 112
 investigation of air over the North Atlantic, 27, 55, 58, 61 (figs. 36-38, 41)
 isobars at 4000 metres, 40 (pls. XIV-XVII), 76
 Réseau Mondial, 19, 20, 21
 Temperature, accumulated
 correlation of, with crops, 202, 203 (figs. 95, 96)
 definition of, 191, 200
 quarterly values of, 1885-1906, 179
 relation of, to crops, 186, 187, 189
 to wheat, 177, 178, 179
 weekly averages of, in British Isles, 192, 193 (figs. 84-87)
 in England East, 201 (fig. 94)
 Temperature at the surface
 association of high values of, with high pressure, 29
 deviations from normal in July, 1911, 28 (fig. 3), 29
 discontinuity of, at the coast-line, 141
 distribution of, over the Globe, 37 (pls. IV-VII), 120, 139, 141
 Humboldt's map of, 139
 maximum values in each zone in 1911, 30, 32
 minimum values in each zone in 1911, 31, 32
 means of departures of, in successive zones, in 1911, 29, 32 (fig. 5)
 persistence of areas of low, 32
 variation of from normal in British Isles, 1878-1910, 194, 195 (figs. 88-89)
 Temperature in the upper air
 correlation of, with pressure, 85, 99-102 (fig. 45)

- Temperature in the upper air—(*contd.*)
 distribution of,
 on July 29, 1908, 39 (fig. 23), 72 (fig. 66),
 135, 213
 over the Globe, 40 (fig. 47), 109, 110,
 111, 120, 121 (fig. 55), 147
 in cyclones and anticyclones, 59, 72, 98,
 110, 111 (fig. 47 *a-b*), 116 (fig. 48),
 122, 135, 136, 149
 regions of observation of, 39
 reversal of surface distribution, 79
 variation of, with height
 in adiabatic processes, 60 (fig. 40), 114,
 116 (fig. 48)
 observed values, Batavia, 61 (fig. 41),
 103, 116 (fig. 48)
 British Isles, 37, 38 (fig. 22), 59 (fig.
 39), 116
 North Atlantic, 61 (fig. 41), 62 (fig. 42)
 selected stations, 116 (fig. 48)
- Temperature
 calculation of daily mean, 20, 23
 choice of scale for, 4, 9, 25
- Temperature-entropy diagrams, 63, 117–119
 (figs. 49 and 50), 155, 156 (fig. 81)
- Tempests, effect of, on crops, 181, 182, 190
- Tercentesimal scale, 24
- Thermodynamics of moist air, 7, 60, 114 *et seq.*
- Time-scale, 46, 126 *et seq.*
- Tornado
 model of, 84
 proposed formation of, by firing shells, 226
- Trade-winds
 definition of, 42, 49
 direction of, at the surface, 47 *et seq.* (figs.
 34–38)
 Hadley's theory of, 43
 Halley's theory of, 42 *et seq.* (fig. 43)
 information in Réseau Mondial, 26, 27
 maps of, 47 *et seq.* (figs. 34 and 35)
 relation of, to distribution of pressure,
 49 *et seq.*
 upper air observations of, 55 (fig. 36), 57
 (fig. 38)
 variation of temperature with height in, 61,
 62 (figs. 41, 42)
 velocity of, at St Helena, 26, 51, 53
 velocity of, at Suva, 26, 51
- Trade Winds of the Atlantic*, 53
- Trajectory of convected air, 91–93 (fig. 44)
- Tropical revolving storms
 effect of convection in, 81
 eviction of air in, 83, 108
 origin of, 83
 paths of, 87, 153
 temperature in, 110 (fig. 47)
- Tropopause
 definition of, 39, 109
 height of, 109, 121 (fig. 55), 122, 149
 temperature of, 110, 111, 121
- Troposphere
 as working substance of heat-engine, 120–
 124
 definition of, 39, 109
 realised entropy in, 123 (fig. 56), 124 (fig.
 57)
 temperature in, 120, 121 (fig. 55), 124,
 147
- Units for meteorology in general, 8 *et seq.*,
