INDEX

- Accuracy attainable in experiments, degree of 20, 35
- Acetylene, action of bromine on 124; preparation of 124
- Acids and bases, neutralisation equivalents of 290, 294, 299
- Air, constituents of 118; corrections for buoyancy of 14, 17, 21, 31; density of 190; heating of metals in 146; liquid 17, 118, 135, 140
- Alchemists 193
- Allotropic modifications of elements 78
- Aluminium, equivalent weight of 306, 344
- Ammonia, volume composition of 396
- Ammonium chloride, effect of heat on 65; molecular weight of 374, 375; Stas's analysis of 59, 231
- Ammonium hydrogen sulphite 56
- Ammonium sulphite, action on iodine of 56, 219; preparation of 56, 219
- Anaximenes' conception of "element" 104
- Animate matter and inanimate, distinction between 49, 50
- Antecedent data, definition of 12; discussion of, with reference to experiment on density of hydrogen chloride 18
- Antimony sulphide, invariable composition of 230
- Argentiferous lead, fractional crystallisation of 127; production of silver from 121
- Argon, discovery of 78, 126; physical properties of 136; separation of other inert gases from 133
- Aristotle, four-element hypothesis supported by 104
- Assumptions made in experimental work, discussion of 12
- Atmolysis 132
- Atomic heat of elements, constancy of 107, 364
- Atomic hypothesis 268, 321, 361
- Atomic weight and combining weight, relation between 360, 375
- Atomic weight, selection of 324, 326; of carbon 373, 377; of cobalt 61; of nickel 61; of tellurium 374
- Atoms 104, 365
- Avogadro's hypothesis 365, 381
- Bacon, acceptance of law of Conservation of Mass 193; opposition to Aristotelian and Paracelsian doctrines 106
- Baker and Bennett's determination of atomic weight of tellurium 138
- Balance, errors attending use of 26
- Barium oxide, use of in Brin process for preparing oxygen 119
- Barometer reading, experimental error in 27
- Bases and acids, neutralisation equivalents of 290, 294, 299
- Becher and phlogiston theory 147, 360
- Benzoic acid, sublimation of 65
- Bergman, quantitative work of 228
- Berthelot, *La Révolution Chimique* 141
- Berthollet, denial of Law of Fixed Ratios 228
- Berzelius, accurate quantitative work of 228, 231, 269, 271; analysis of chlorides of copper 270, 280, oxides of copper 270, 292, oxides of iron 270, 292, 295, oxides of lead 270, 271, 292, 295, sulphides of iron 196, 270, 292, 295, sulphides of lead 292, 293, 295, sulphuric anhydride 270, sulphurous anhydride 270; synthesis of litharge 270; appreciation of Richter's work 292, 294; contributions to establishment of Richter's Law 292; conversion of lead sulphide to sulphate 293, 297; publication of table of atomic weights 364; ratio potass chlorate to chloride 94; standard for atomic weights 316; system of symbolic notation 322; system of selection of atomic weight 324, 326, 372
- Binary compounds 297, 309, 363
- Biot 4; discovery of optical rotatory power 62
- Black, use of quantitative methods 82
- Blondlot's rays 51
- Boyle, Robert, acceptance of law of Conservation of Mass 193; definition of "element" 106; experiments on combustion 143, 156; opposition to Aristotelian and Paracelsian doctrines 106; use of qualitative methods

Index

- 82; views on increase of weight during combustion 146
 Boyle's Law 12, 384
 Brin process for preparation of oxygen 119
 Bromine, action on unsaturated organic compounds 124; action on mercury 226
 Buchholz 228
 Buoyancy of air, corrections for 14, 17, 21, 31
 Calcination of tin and lead, Lavoisier's work on 149, 194; increase of weight noticed by Rey 143
 Calcium, combining weight of 346, 356
 Calcium carbide 124
 Calcium carbonate, composition of 249
 Calcium nitrate, effect of heat on 70, 72
 Calxes, metallic, reduction of 143
 Camphor, sublimation of 65
 Cannizzaro molecular and atomic weight determinations by Avogadro's hypothesis 368, 372
 Carbon, atomic weight of 373, 377; combining weight of 345
 Carbon bisulphide as solvent 56, 123
 Carbon dioxide, composition of 267, 268, 271; production and properties of 210; synthesis of 256
 Carbon monoxide 257; composition of 267, 268, 271
 Carbonates of potassium 261, 272
 Carburetted hydrogen, heavy (ethylene) 268; light (methane) 268
 Cavendish, determination of equivalent weights 289; neutralisation equivalents of acids and bases 290, 294; production of hydrogen 143; synthesis of water 10
 Cerium, separation from didymium and lanthanum 128, 132
 Charcoal, coconut, use of in absorbing gases 118, 201
 Charcoal used for production of high vacua 17
 Charles' Law 12, 384
 Chemical change unaccompanied by change in weight 28, 34, 205; nature of 53; Landolt's work on 34, 205
 Chemistry, definition of 58; school-teaching of 7, 254, 378
 Chlorides, volumetric estimation of 65, 69
 Chlorine, combining weight of 342, 351, 355; composition of 77; density of 46; elementary nature of 78
 Cinnamic acid, action of bromine on 124
 Classification of the sciences 48
 Classification of substances into complex and simple (elements) 103
 Classification of complex substances into mixtures and compounds 111
 Cobalt, atomic weight of 61
 Coefficient of solubility 119
 Combining volumes, Gay-Lussac's law of 380
 Combining weights, accurate determination of 296; discussion of experimental determination of 324, 328; standard for 315; and atomic weight, relation between 360; of aluminium 344, calcium 346, 356, carbon 345, chlorine 342, 351, 355, hydrogen 340, iodine 348, magnesium 344, nitrogen 317, 328, 333, 335, 339, 358, potassium 342, radium 330, 335, silver 342, sodium 352, tellurium 329, 331, 332, 335, tin 344, zinc 344
 Combustion 77, 142, 177
 Complex substances, types of 111, 225
 Compounds, binary and ternary 297, 309, 363; definition of 111, 122, 253
 Conservation of Mass 192; work of Landolt and of Manley on 205
 Copper, effect of heating in air 86
 Copper calcium acetate, change produced on heating 53
 Copper, chlorides of 270, 280
 Copper, oxides of 270
 Cornish, Vaughan, *Practical Proofs of Chemical Laws* 217, 399
 Courtois, discovery of iodine 109
 Cuprous chloride 144, 281
 Cuprous oxide, action of heat on 54
 Curie, P. 6, 108
 Curie, Mme. 108; fractional crystallisation of radium chloride 127
 Dalton, John, accuracy of experimental work 292; analysis of hydrides of carbon 268; arbitrary rules for selection of atomic weight 323, 363, 372; atomic theory of 268, 321, 361; definition of element 106; rejection of Gay-Lussac's law of volumes 381
 Davy, Sir Humphry, analysis of nitrous and nitric oxides 268; decomposition of water 10; definition of element 106; isolation of alkali metals 108; proof of elementary nature of chlorine 78, 110; qualitative work of 82
De Rerum Natura 104
 Degree of accuracy obtainable in experiments 35; of measuring instruments 20

405

- Demarçay, work on resolution of didymium 133
- Democritus, Atomic Theory of 104, 193, 321
- Density, of air and nitrogen 169; of chlorine, class results for determination of 46, 47; of hydrogen chloride, students' experiment 10; Gray and Burt's determination of 16; of oxygen, 266; of soluble gas, determination of 41
- Density, gaseous 184
- Dephlogisticated air (oxygen) 145
- Descartes' rejection of Aristotelian "elements" and Paracelsian "principles" 106
- Deslandres 6
- Didymium 128, 132
- Diffusion, fractional 126
- Distillation, fractional 22, 129, 139
- Dulong and Petit's Law 364
- Dumas, determination of vapour density 188; method for determining composition of water 10, 198
- Efficiency of balance, Landolt's experiments on 27
- Element, conception of 103; four-element hypothesis 104
- Elements, allotropic modifications of 78
- Empedocles 104
- Epicurus' Atomic Theory 104, 193, 321
- Equivalent weight, *see* combining weights
- Equivalents, neutralisation of acids and bases 290, 294, 299
- Error, experimental, *see* experimental errors
- Error, probable 24; in volumetric estimations 36; in accurate work 376
- Errors of measurement 24
- Ethylene, action of bromine on 124; Dalton's analysis of 268
- Experimental errors, discussion of 24, 27, 31, 34, 38, 70, 161, 205, 296, 298, 341, 392, 398, 401
- Ferrous hydrate, absorption of oxygen by 119, 144
- Ferrous oxalate, preparation of pyrophoric iron from 55
- Ferrous salts 76
- Fire air (oxygen) 145
- Fixed Ratios, Law of 225
- Fluorine, isolation of by Moissan 108
- Formulae, selection of 325
- Fractional crystallisation 127, 128, 131
- Fractional distillation 22, 129, 139
- Fractional precipitation 128
- Fractionation 126
- Gaseous density 184
- Gassendi 106, 193
- Gay-Lussac, investigation of properties of iodine 109; Law of Combining Volumes 380
- Gay-Lussac and Humboldt, volume composition of water 380
- Geber, three "principles" 105; work on calcination 143, 156
- Glass vessels, condensation on walls of 15
- Gray's work on nitric oxide 140, 201, 272
- Gray and Burt's determination of density of hydrogen chloride 16, 18, 139; composition of hydrogen chloride 389
- Guye and Bogdan, analysis of nitrous oxide 272
- Guye and Fluss, analysis of nitrosyl chloride 202
- Heavy carburetted hydrogen (ethylene) 268
- Helium, physical constants of 136; production from radium 6
- Hemihedrism 4, 62
- Heraclitus 104
- Heterogeneous substances 111, 225
- Hofmann, lecture demonstrations of Gay-Lussac's Law 384, 395; vapour density determination 189
- Homogeneous substances 111, 225
- Hooke 146
- Horn silver 96
- Hydrogen, combining weight 340; discovery of 143; solubility of in palladium 139
- Hydrogen chloride, composition of 77, 389; density of 10, 16
- Hydrogen, heavy carburetted (ethylene) 268
- Hydrogen, light carburetted (methane) 268
- Hydrogen, liquid 135
- Hydrogen, peroxide 287
- Hydrolysis of chlorides 349
- Hypothesis, value of 361
- Iceland Spar, composition of 249
- Identity, meaning of term 59
- Illustrative experiments 2, 8, 9
- Inanimate and animate matter, distinction between 49
- Indestructibility of matter, a scientific principle 194

- Indicators, limitations in use of 277
 Inflammable air (hydrogen) 144, 147
 Iodine, action of carbon bisulphide on 56; combining weight of 348; discovery of 109; position in Periodic System of 137; sublimation of 65
 Iron, Berzelius's analysis of oxides of 270, 295; increase in weight when heated in air 2, 54, 86; properties of 75, 112, 123; pyrophoric 55; reduced 55; synthesis of calx by Lavoisier 194
 Iron pyrites 270
 Iron sulphide 295
 Isomerism 4
- Klaproth, quantitative work of 228
 Kopp 319
 Krypton, discovery of 78, 133; physical properties of 136
 Kunkel, quantitative work of 228
- Laevo-tartaric acid discovered by Pasteur 3, 62
 Landolt, test of efficiency of balance 27; work on Conservation of Mass, 32, 205
 Lanthanum, separation from cerium and didymium 128, 132
 Laurent 323
 Lavoisier, analysis of two oxides of carbon 268; calcination of lead and tin, 149, 159, of iron 157, 194; criticism of phlogiston theory 148; demonstration of Conservation of Mass 157; proof of composition of air 360; synthesis and analysis of mercury calx 3, 119, 150, 159, 175, 194, 360; use of quantitative methods 82
 Lead, argentiferous, fractionation of 121
 Lead, calcination of 149, 194; effect of heating in air 176
 Lead nitrate, action of heat on 53, 58, 64
 Lead oxalate 286
 Lead, oxides of 176, 177, 270, 271
 Lead-potassium iodide, action of heat on 53, 54, 58
 Lead, red 176, 177
 Lead sulphate 286, 289, 293, 296
 Lead sulphide 286, 293, 295, 296
 Leucippus 104, 321
 Light carburetted hydrogen (methane) 268
 Limited miscibility 79
 Litharge (lead monoxide) 176, 177, 270, 286, 293, 295
 Liquid air 17, 118, 135, 140; hydrogen 135
 Lithium 126
- Liver of sulphur 144, 149
 Lothar Meyer, Periodic System of 137
 Lucretius, *De Rerum Natura*, 104, 193, 321
- Magnesium, effect of heating in air of 2, 54, 86, 152; determination of combining weight of 37, 306, 307, 309, 344
 Magnesium carbonate, effect of heat on 53
 Magnesium nitride 55, 87, 152
 Magnesium silicide 55, 87, 152
 Manley's experiments on conservation of mass 205
 Marble, action of hydrochloric acid on 210
 Marggraf, quantitative work of 228
 Marignac 94
 Marsh gas (methane) 124
 Mass, Law of Conservation of 192, 205
 Mayow, work on combustion 143, 146, 157
 Measuring instruments, accuracy of 20, 38
 Mendeléeff's Periodic System 137, 371
 Mercurius precipitatus per se 145, 150, 159, 175
 Mercury (principle of ductility etc.) 105
 Mercury bromides, synthesis of 226
 Mercury calx, Lavoisier's synthesis and analysis of 3, 119, 150, 159, 175, 194, 360
 Mercury iodides, synthesis of 254
 Metal wools, use of 55
 Meyer, Lothar, Periodic System of 137
 Meyer, Victor, method for determination of vapour densities 189
 Miscibility, limited 79
 Mistakes, distinction between experimental errors and 24
 Mixtures 111, 122, 253
 Moissan, isolation of fluorine 108
 Molecular weights 366; of ammonium chloride 374, 375
 Molecules 365
 Morley, density of hydrogen 303; gravimetric composition of water 10, 198, 199
 Multiple ratios, Law of 253, 318
 Muriatic acid gas (hydrogen chloride) 77
- N-rays 51
 Neon 78, 133, 136
 Neutralisation, equivalents of acids and bases 290, 294, 299
 Nickel, atomic weight of 61
 Nicol's prism 250

Cambridge University Press

- Nitric acid 144
 Nitric oxide, analysis of 139, 144, 201, 268, 272
 Nitrogen 118, 136; combining weight of 317, 328, 333, 335, 339, 358
 Nitrogen, "atmospheric" 61; "chemical" 61; diffusion of 127; solubility of 119
 Nitrosyl chloride, analysis of 202
 Nitrous oxide, analysis of 118, 120, 123, 139, 268, 272
 Noyes, synthesis of water 198, 200; synthesis of hydrogen chloride 201
- Olein 124
 Optical activity 4, 62
 Ostwald 6
 Oxalates of potassium, composition of, 277
 Oxygen 114, 118; density of 266; physical constants of 136; solubility of 119
 Oxymuriatic acid gas (chlorine) 77
- Palladium hydride 139, 199
 Paracelsus' three principles 105
 Pasteur, discovery of laevo-tartaric acid 3, 62
 Pelouze 94
 Penny 94
 Periodic function 107
 Periodic system 137, 371
 Periodic table 128, 134, 137
 Permanent ratios, Law of 284, 288
 Phlogisticated air (nitrogen) 144
 Phlogiston theory 147
 Phosphorus, allotropic forms of 78; burning of 29, 34, 151, 154, 160, 206
 Physics, definition of 58
 Pipettes, errors in measurement by 25
 Plane of polarisation, rotation of 3
 Platinised asbestos 53, 114
 Platinum, effect of heat on 53
 Plato 104, 193
 "Plumbum vitriolatum" (lead sulphate) 289
 Potassium, carbonates of 261, 276; combining weight of 342; discovery of 108; oxalates of 277; sulphates of 263
 Potassium chlorate, 90, 93, 282, 283; formula for 337; properties of 263; solubility curve for 90
 Potassium chloride, analysis of 238; formula for 337; solubility curve for 90
 Potassium perchlorate, 90, 93, 282, 283; formula for 337; preparation of 263; solubility curve for 90
- Priestley 144; discovery of oxygen 145, 150
 Probable error 24, 376
 Properties; qualitative 60, 64; quantitative 60, 64
 Proust, proofs of fixity of composition 229, 249, 253
 Purity of substances, determination of degree of 22
 Pyrolusite 145
 Pyrophoric iron 55
 Pythagoras 104
- Qualitative methods, Boyle, Davy 82
 Qualitative properties 60, 67, 83
 Quantitative methods, Lavoisier, Black 82
 Quantitative properties 60, 61, 67, 83
- Racemic acid 3
 Radio activity 6, 127
 Radium, atomic weight of 325; combining weight of 99, 335; discovery of 108; production of helium from 6
 Radium bromide 6
 Radium chloride 335
 Ramsay, Sir William 6, 399; discovery of argon 126, discovery of helium etc. 134
 Rayleigh, Lord, discovery of argon 61, 126; on gaseous densities 21, 61, 303
 Regnault on gaseous densities 16, 17, 21, 188
 Research work and method 8, 9
 Rey 143, 157
 Richards, T. W., determination of combining weights, 334, 339, 349
 Richter, quantitative work of 228; establishment of Law of Permanent Ratios 288, 289, 292, 294
 Rotation of plane of polarisation 3
 Rutherford, discovery of nitrogen 144
- Sal ammoniac 65
 Salt, one of the three Paracelsian principles 105
 Scheele, discovery of oxygen 145, 175; research on air and fire 77, 144, 148, 163
 School teaching of chemistry 7, 378
 Sea serpent 51
 Selenium, place in periodic table 137
 Silver, combining weight of 338, 342; gravimetric estimation of 97; horn 96; preparation of pure 348; production of 97, 121
 Silver chlorate, analysis of 338
 Silver chloride, composition of 228, 231, 235, 338; preparation of 96; synthesis 59, 121
