SUBJECT INDEX

- Absorption, continuous and discrete, 408
 spectrum of carbon dioxide, 455
 spectrum of diatomic molecules, 380
- Acetic acid, critical constants, 19
 dimerisation, 503
- Acetylene, critical constants, 19
 internuclear distances, 45
 restoring force constant, 411
 specific heats, 293
- Acids, long-chain fatty, 38
- Actinium series, 254
- Activation energy, 532
- Adsorption, general, 526
- Affinity of electrons for halogen atoms, 603
- Alcohols, boiling-points of normal, 27
 critical constants of normal, 19
 head area of long chain, 38
 specific heat of liquid, 317
- Alkali halides, attractive energy constants, 606
 crystalline structure, 577
 dipole moments, 613
 interionic distance, 48, 606
 lattice energy, 593
- Alkali metals, doublet separation in atomic spectra, 236
 electronic states of atoms, 277
 energy of molecular dissociation, 390
 fusion of, 301
 photoelectric effect, 134
 restoring force constants, 411
 spectra of atomic, 161
 spectroscopic constants of molecular, 395
 thermodynamic potentials, 426
- Alkaline earth metals, ground electronic state, 277
 oxides, restoring force constants, 411
- Alkyl halides, critical temperature, 27
- Aluminium, diffraction of electrons, 169
 diffraction of X-rays, 44
 frequency of atomic vibration, 132
 reaction with neutron, 267
 specific heat of solid, 129
- Ammonia, critical constants, 18
 decomposition, 329, 495
 dipole moment, 97
 energy of linkage, 496
 entropy of vaporisation, 314
 specific heats, 293
- Ammonium halides, dimorphism, 587
- Amplitude of linear oscillation, 87
- Angle, valency, 91, 449
- Anharmonic oscillator, 389, 621, 629
- Anthracene, 589
- Antimony pentachloride, 494
- Area, cross-sectional of hydrocarbon chain, 39
- Argon, atomic weight, 3
 attractive energy constant, 368
 critical constants, 18
 dispersion constants, 371
 energy of sublimation, 362
 entropy of fusion, 300
 entropy of vaporisation, 314
 entropy, standard, 351

 Xenon, attractive energy constant, 368
 critical temperature, 18
 dispersion constants, 371
 entropy of vaporisation, 314
 heat of vaporisation, 354
 ionisation potential, 342
 lattice dimensions, 578
 molar refraction, 372
 triple point, 354
 Van der Waals' constants, 370
 Zinc, dissolution in acids, 291
 entropy in standard state, 351
 entropy of fusion, 300
 entropy of vaporisation, 314
 frequency of solid vibration, 132
 lattice constants, 585
 photoelectric effect, 136
 solvated radii, 39
 specific heat, 129
 vapour pressure constant, 350
 Zinc blende, *see* Zinc sulphide
 Zinc sulphide, crystal type, 581
 Madelung constant, 595
