TABLE OF CONTENTS

CHAPTER PAGE

I. GROUPS AND RINGS 1
1. Introduction 1
2. Sets 1
3. Correspondences 2
4. Integers 5
5. Groups 7
6. Equivalence, subgroups 10
7. Transformation groups 12
8. Rings 13
9. Some properties of rings 15
10. Linear sets over a ring 16
11. Sequences 16
12. Polynomials over $\mathfrak{A}$ 17

II. RINGS WITH A UNITY ELEMENT 21
1. The ring $\mathfrak{E}$ 21
2. The characteristic of a ring 22
3. The ring $\mathfrak{A}[x]$ 24
4. Integral domains and fields 26
5. Equivalence, subsystems 29
6. Divisibility 30
7. The integral domain $\mathfrak{F}[x]$ 32
8. Unique factorization domains 34
9. The domain $\mathfrak{J}[x]$ 36
10. The results of the text 39
11. Linear sets over $\mathfrak{F}$ 40
12. Forms 43
13. Algebras over $\mathfrak{F}$ 43

III. MATRICES 46
1. Rectangular matrices 46
2. Multiplication of matrices 48
3. Determinants 52
4. The rank of matrices 53
5. The algebra $\mathfrak{M}_n$ 55
6. Elementary transformations over $\mathfrak{J}$ 59
7. Equivalence of matrices in a field $\mathfrak{F}$ 62
8. Linear equations 67
9. Bilinear forms 70
10. Equivalence in $\mathfrak{F}[\lambda]$ 70

CHAPTER PAGE

IV. SIMILARITY OF SQUARE MATRICES 75
1. Linear transformations and similar matrices 75
2. The meaning of canonical forms 76
3. Scalar polynomials 78
4. Canonical forms 80
5. Elementary divisors 82
6. Nilpotent matrices 87
7. Idempotent matrices 88
8. The automorphisms of $\mathfrak{M}_n$ 89
9. Another basis of $\mathfrak{M}_n$ 91

V. SYMMETRIC AND SKEW MATRICES 96
1. Involutions of $\mathfrak{M}_n$ 96
2. Involutions determined by $\mathfrak{R}$ 97
3. The U-equivalence of matrices 99
4. Elementary T-transformations 100
5. The first reduction of T-symmetric matrices 103
6. The Kronecker reduction 104
7. Skew matrices 108
8. Matrices over an algebraically closed field 109
9. Ordered fields 110
10. Formulation of the classical theory 112
11. Reduction of real symmetric and complex Hermitian matrices . 114
12. Positive definite matrices 116
13. Orthogonal T-equivalence 117
14. Orthogonal equivalence of real skew matrices 120
15. Forms 124

VI. FINITE GROUPS 126
1. Subsets 126
2. Subgroups 127
3. Cyclic groups 128
4. Conjugate groups 131
5. Quotient groups 132
6. Composition series 134
7. The Sylow theorems 138
8. Permutation groups 138
9. The order of a permutation 140
10. A composition series of $\mathfrak{S}_n$ 142
11. Finite permutation groups 144

VII. FIELDS OVER $\mathfrak{F}$ 146
1. Symmetric functions 146
2. Fields over $\mathfrak{F}$ 151
3. Simple extensions of $\mathfrak{F}$ 152
4. Algebraic fields over $\mathfrak{F}$ 153

CHAPTER PAGE

5. The root field of an equation 156
6. Conjugate fields 160
7. Composites 161
8. Fields of characteristic p 162
9. Separable equations 164
10. Finite fields 166
11. Separable fields 168
12. A lemma on infinite fields 170

VIII. The Galois Theory 172
1. Normal fields 172
2. The automorphisms of $\mathfrak{N}$ 172
3. The fundamental theorems of the Galois theory 173
4. Composites of $\mathfrak{N}$ and $\mathfrak{Z}$ 180
5. Relative traces and norms 181
6. The Galois group of an equation 183
7. Some properties of $\mathfrak{G}_0$ 184
8. Equations with a prescribed group 184
9. Direct products 185
10. Metacyclic fields over $\mathfrak{F}$ 186
11. Cyclotomic fields 187
12. Solution by radicals 189

IX. Cyclic Fields 192
1. The structure problem 192
2. Generating automorphisms and elements of $\mathfrak{Z}$ over $\mathfrak{F}$ 193
3. Necessary conditions for fields of characteristic p 194
4. The norm and trace theorems 199
5. Sufficiency theorems for fields of characteristic p 203
6. Cyclic fields of degree p^e over a field containing a primitive pth root of unity 206
7. Adjunction of ζ 209

X. Algebras of Matrices 217
1. Algebras of order n over $\mathfrak{F}$ 217
2. The regular representation of an algebra 217
3. The characteristic and minimum functions, scalar extension . . 222
4. Direct products and sums 226
5. Direct products of total matric algebras 227
6. The degree of a total matric algebra 232
7. Quadrate algebras 233
8. Matrices with separable characteristic equations 236
9. The cyclic representation of a total matric algebra 239
10. Cyclic algebras 242
11. The matrices commutative with a subfield of $\mathfrak{M}_n$ 244
12. The polynomial algebra $\mathfrak{F}[A]$ 245

CHAPTER PAGE

XI. Introduction to the Transcendental Theory of Fields . . . 251
1. Archimedean ordered fields . . . 251
2. Elements of the theory of ideals . . . 252
3. Ideals in a commutative ring . . . 254
4. Fields with a valuation . . . 255
5. Regular sequences of $\mathfrak{F}$ . . . 257
6. The derived field of $\mathfrak{F}$ . . . 260
7. Certain conventions about derived fields . . . 261
8. Limits in a complete field . . . 263
9. The case $\mathfrak{F} = \mathfrak{T}$ . . . 263
10. The real number system . . . 266
11. A valuation of $\mathfrak{F}_\phi$ . . . 267
12. Algebraic extensions . . . 269
13. Quadratic extensions of a complete field . . . 272

XII. Valuation Functions . . . 277
1. Introduction . . . 277
2. Lemmas from analysis . . . 277
3. The types of valuations . . . 281
4. Archimedean valuations of $\mathfrak{R}$ . . . 282
5. Archimedean valued fields . . . 284
6. Non-archimedean valuations of $\mathfrak{R}$ . . . 289
7. The p-adic number fields $\mathfrak{R}_p$ . . . 290
8. The series representation of p-adic numbers . . . 292
9. Algebraic extensions of an integral domain . . . 294
10. Algebraic extensions of p-adic number fields . . . 296
11. The valuation theory of $\mathfrak{K}$ over $\mathfrak{R}_p$ . . . 298
12. Ideals in algebraic number fields . . . 301
13. Fields of $\mathfrak{P}$-adic numbers . . . 303
14. The literature . . . 305

Glossary . . . 307

Index . . . 313
