Contents

<i>Preface</i>	<i>page</i> ix
<i>List of contributors</i>	xi
1 Classical solutions to the two-dimensional Euler equations and elliptic boundary value problems, an overview <i>H. Beirão da Veiga</i>	1
2 Analyticity radii and the Navier–Stokes equations: recent results and applications <i>Z. Bradshaw, Z. Grujić, & I. Kukavica</i>	22
3 On the motion of a pendulum with a cavity entirely filled with a viscous liquid <i>G.P. Galdi & G. Mazzone</i>	37
4 Modal dependency and nonlinear depletion in the three-dimensional Navier–Stokes equations <i>J.D. Gibbon</i>	57
5 Boussinesq equations with zero viscosity or zero diffusivity: a review <i>W. Hu, I. Kukavica, F. Wang, & M. Ziane</i>	77
6 Global regularity versus finite-time singularities: some paradigms on the effect of boundary conditions and certain perturbations <i>A. Larios & E.S. Titi</i>	96
7 Parabolic Morrey spaces and mild solutions of the Navier–Stokes equations. An interesting answer through a silly method to a stupid question. <i>P.G. Lemarié–Rieusset</i>	126

viii

Contents

- 8 **Well-posedness for the diffusive 3D Burgers equations with initial data in $H^{1/2}$**
B.C. Pooley & J.C. Robinson 137
- 9 **On the Fursikov approach to the moment problem for the three-dimensional Navier–Stokes equations**
J.C. Robinson & A. Vidal-López 154
- 10 **Some probabilistic topics in the Navier–Stokes equations**
M. Romito 175
