<i>Introduction</i>	<i>page xi</i>
1 Discrete group actions	1
1.1 Action of a group on a topological space	3
1.2 Iwasawa decomposition	8
1.3 Siegel sets	15
1.4 Haar measure	19
1.5 Invariant measure on coset spaces	23
1.6 Volume of $SL(n, \mathbb{Z}) \backslash SL(n, \mathbb{R}) / SO(n, \mathbb{R})$	27
2 Invariant differential operators	38
2.1 Lie algebras	39
2.2 Universal enveloping algebra of $\mathfrak{gl}(n, \mathbb{R})$	42
2.3 The center of the universal enveloping algebra of $\mathfrak{gl}(n, \mathbb{R})$	46
2.4 Eigenfunctions of invariant differential operators	50
3 Automorphic forms and L-functions for $SL(2, \mathbb{Z})$	54
3.1 Eisenstein series	55
3.2 Hyperbolic Fourier expansion of Eisenstein series	59
3.3 Maass forms	62
3.4 Whittaker expansions and multiplicity one for $GL(2, \mathbb{R})$	63
3.5 Fourier–Whittaker expansions on $GL(2, \mathbb{R})$	67
3.6 Ramanujan–Pettersson conjecture	68
3.7 Selberg eigenvalue conjecture	70
3.8 Finite dimensionality of the eigenspaces	71
3.9 Even and odd Maass forms	73
3.10 Hecke operators	74
3.11 Hermite and Smith normal forms	77
3.12 Hecke operators for $\mathcal{L}^2(SL(2, \mathbb{Z}) \backslash \mathfrak{h}^2)$	80

3.13	L-functions associated to Maass forms	84
3.14	L-functions associated to Eisenstein series	89
3.15	Converse theorems for $SL(2, \mathbb{Z})$	91
3.16	The Selberg spectral decomposition	94
4	Existence of Maass forms	99
4.1	The infinitude of odd Maass forms for $SL(2, \mathbb{Z})$	100
4.2	Integral operators	101
4.3	The endomorphism \heartsuit	105
4.4	How to interpret \heartsuit : an explicit operator with purely cuspidal image	106
4.5	There exist infinitely many even cusp forms for $SL(2, \mathbb{Z})$	108
4.6	A weak Weyl law	110
4.7	Interpretation via wave equation and the role of finite propagation speed	111
4.8	Interpretation via wave equation: higher rank case	111
5	Maass forms and Whittaker functions for $SL(n, \mathbb{Z})$	114
5.1	Maass forms	114
5.2	Whittaker functions associated to Maass forms	116
5.3	Fourier expansions on $SL(n, \mathbb{Z}) \backslash \mathfrak{h}^n$	118
5.4	Whittaker functions for $SL(n, \mathbb{R})$	128
5.5	Jacquet's Whittaker function	129
5.6	The exterior power of a vector space	134
5.7	Construction of the I_ν function using wedge products	138
5.8	Convergence of Jacquet's Whittaker function	141
5.9	Functional equations of Jacquet's Whittaker function	144
5.10	Degenerate Whittaker functions	150
6	Automorphic forms and L-functions for $SL(3, \mathbb{Z})$	153
6.1	Whittaker functions and multiplicity one for $SL(3, \mathbb{Z})$	153
6.2	Maass forms for $SL(3, \mathbb{Z})$	159
6.3	The dual and symmetric Maass forms	161
6.4	Hecke operators for $SL(3, \mathbb{Z})$	163
6.5	The Godement–Jacquet L-function	172
6.6	Bump's double Dirichlet series	186
7	The Gelbart–Jacquet lift	194
7.1	Converse theorem for $SL(3, \mathbb{Z})$	194
7.2	Rankin–Selberg convolution for $GL(2)$	210
7.3	Statement and proof of the Gelbart–Jacquet lift	213
7.4	Rankin–Selberg convolution for $GL(3)$	223

8	Bounds for L-functions and Siegel zeros	235
8.1	The Selberg class	235
8.2	Convexity bounds for the Selberg class	238
8.3	Approximate functional equations	241
8.4	Siegel zeros in the Selberg class	245
8.5	Siegel's theorem	249
8.6	The Siegel zero lemma	251
8.7	Non-existence of Siegel zeros for Gelbart–Jacquet lifts	252
8.8	Non-existence of Siegel zeros on $GL(n)$	256
9	The Godement–Jacquet L-function	259
9.1	Maass forms for $SL(n, \mathbb{Z})$	259
9.2	The dual and symmetric Maass forms	261
9.3	Hecke operators for $SL(n, \mathbb{Z})$	266
9.4	The Godement–Jacquet L-function	277
10	Langlands Eisenstein series	285
10.1	Parabolic subgroups	286
10.2	Langlands decomposition of parabolic subgroups	288
10.3	Bruhat decomposition	292
10.4	Minimal, maximal, and general parabolic Eisenstein series	295
10.5	Eisenstein series twisted by Maass forms	301
10.6	Fourier expansion of minimal parabolic Eisenstein series	303
10.7	Meromorphic continuation and functional equation of maximal parabolic Eisenstein series	307
10.8	The L-function associated to a minimal parabolic Eisenstein series	310
10.9	Fourier coefficients of Eisenstein series twisted by Maass forms	315
10.10	The constant term	319
10.11	The constant term of $SL(3, \mathbb{Z})$ Eisenstein series twisted by $SL(2, \mathbb{Z})$ -Maass forms	321
10.12	An application of the theory of Eisenstein series to the non-vanishing of L-functions on the line $\Re(s) = 1$	322
10.13	Langlands spectral decomposition for $SL(3, \mathbb{Z}) \backslash \mathfrak{h}^3$	324
11	Poincaré series and Kloosterman sums	337
11.1	Poincaré series for $SL(n, \mathbb{Z})$	337
11.2	Kloosterman sums	339
11.3	Plücker coordinates and the evaluation of Kloosterman sums	343
11.4	Properties of Kloosterman sums	350

11.5	Fourier expansion of Poincaré series	352
11.6	Kuznetsov's trace formula for $SL(n, \mathbb{Z})$	354
12	Rankin–Selberg convolutions	365
12.1	The $GL(n) \times GL(n)$ convolution	366
12.2	The $GL(n) \times GL(n+1)$ convolution	372
12.3	The $GL(n) \times GL(n')$ convolution with $n < n'$	376
12.4	Generalized Ramanujan conjecture	381
12.5	The Luo–Rudnick–Sarnak bound for the generalized Ramanujan conjecture	384
12.6	Strong multiplicity one theorem	393
13	Langlands conjectures	395
13.1	Artin L-functions	397
13.2	Langlands functoriality	402
	<i>List of symbols</i>	407
	<i>Appendix The GL(n)pack Manual Kevin A. Broughan</i>	409
	<i>A.1 Introduction</i>	409
	<i>A.2 Functions for GL(n)pack</i>	413
	<i>A.3 Function descriptions and examples</i>	416
