

## Contents

	<i>Preface to the first edition</i>	page ix
	<i>Preface to the second edition</i>	xi
	<i>Basic notation and conventions</i>	xii
	<i>Introduction</i>	xv
<b>Part I Information measures in simple coding problems</b>		1
<b>1</b>	<b>Source coding and hypothesis testing; information measures</b>	3
<b>2</b>	<b>Types and typical sequences</b>	16
<b>3</b>	<b>Formal properties of Shannon's information measures</b>	34
<b>4</b>	<b>Non-block source coding</b>	48
<b>5</b>	<b>Blowing up lemma: a combinatorial digression</b>	71
<b>Part II Two-terminal systems</b>		81
<b>6</b>	<b>The noisy channel coding problem</b>	83
<b>7</b>	<b>Rate-distortion trade-off in source coding and the source–channel transmission problem</b>	107
<b>8</b>	<b>Computation of channel capacity and <math>\Delta</math>-distortion rates</b>	120
<b>9</b>	<b>A covering lemma and the error exponent in source coding</b>	132
<b>10</b>	<b>A packing lemma and the error exponent in channel coding</b>	144
<b>11</b>	<b>The compound channel revisited: zero-error information theory and extremal combinatorics</b>	184

viii	<b>Contents</b>	
<b>12</b>	<b>Arbitrarily varying channels</b>	209
<b>Part III</b>	<b>Multi-terminal systems</b>	241
<b>13</b>	<b>Separate coding of correlated sources</b>	243
<b>14</b>	<b>Multiple-access channels</b>	272
<b>15</b>	<b>Entropy and image size characterization</b>	304
<b>16</b>	<b>Source and channel networks</b>	354
<b>17</b>	<b>Information-theoretic security</b>	400
