Teaching Secondary Mathematics

Technology plays a crucial role in contemporary mathematics education. Teaching Secondary Mathematics covers major contemporary issues in mathematics education, as well as how to teach key mathematics concepts from the Australian Curriculum: Mathematics. It integrates digital resources via Cambridge HOTmaths (www.hotmaths.com.au), a popular, award-winning online tool with engaging multimedia that help students and teachers learn and teach mathematical concepts. This book comes with a free 12-month subscription to Cambridge HOTmaths.

Each chapter is written by an expert in the field, and features learning objectives, definitions of key terms, and classroom activities – including HOTmaths activities and reflective questions.

Teaching Secondary Mathematics is a valuable resource for pre-service teachers who wish to integrate contemporary technology into teaching key mathematical concepts and engage students in the learning of mathematics.

Gregory Hine is a Senior Lecturer in Mathematics at the University of Notre Dame.

Robyn Reaburn is a Lecturer in Mathematics education at the University of Tasmania.

Judy Anderson is Associate Professor in Mathematics education, Director of the STEM Teacher Enrichment Academy, and a member of the Academic Board at the University of Sydney. She is currently the President of the Australian Curriculum Studies Association.

Linda Galligan is an Associate Professor with the School of Agricultural, Computational and Environmental Sciences at the University of Southern Queensland.

Colin Carmichael is a Senior Lecturer in Diploma Programs at the University of Southern Queensland.
Michael Cavanagh is the Director of the Teacher Education Program in the School of Education and Senior Lecturer in Mathematics education at Macquarie University.

Bing Ngu is a Lecturer in the Mathematics Education team within the School of Education at the University of New England.

Bruce White is a Lecturer in mathematics and science teacher education at the University of South Australia.

Part 1 Contemporary Issues in Learning and Teaching Mathematics 1

Chapter 1 Introduction: the learning and teaching of mathematics 2
  Michael Cavanagh
  Introduction 2
  Key terms 3
  Mathematics for the twenty-first century 3
  Mathematical proficiency and the Australian Curriculum 10
  Theories about how students learn mathematics 12
  Student engagement in learning mathematics 22
  Summary 27

Chapter 2 Language and mathematics 30
  Linda Galligan
  Introduction 30
  Key terms 32
  Why language is important 33
  The mathematics register 34
  Language in the classroom 47
  Technical communication 53
  Summary 59

Chapter 3 Making mathematical connections 61
  Gregory Hine
  Introduction 61
  Key terms 62
  The importance of making mathematical connections 63
Contents

What are mathematical connections? 68
Teachers’ practices in promoting mathematical connections 73
Science, technology, engineering and mathematics (STEM) 79
Putting activities into practice 83
Summary 91

Chapter 4 Using technology in mathematics education 94
Bruce White
Introduction 94
Key terms 95
Why use technology in the teaching and learning of mathematics? 96
Mathematics software 101
Devices used for teaching, learning and doing mathematics 107
Mathematics online 112
Summary 116

Chapter 5 Inquiry-based learning 117
Judy Anderson
Introduction 117
Key terms 118
Student-centred learning in mathematics classrooms 119
Teaching strategies that foster student-centred approaches 127
Problem solving and modelling in mathematics classrooms 131
Inquiry-based learning in mathematics classrooms 135
Collaborative and cooperative learning 139
Summary 142

Chapter 6 Gender, culture and diversity in the mathematics classroom 146
Gregory Hine
Introduction 146
Key terms 148
Gender in the secondary mathematics classroom 148
Culture in the secondary mathematics classroom 159
Special needs learners in the secondary mathematics classroom 166
Summary 176

Chapter 7 Assessing mathematics learning 178
Gregory Hine
Introduction 178
Key terms 179
Why assess? 180
What is assessment? 184
Guidelines for creating assessments in secondary mathematics 197
Providing feedback to students 207
Summary 210
Part 2 Learning and Teaching Key Mathematics Content

Chapter 8 Number and algebra
Bing Ngu
Introduction 213
Key terms 214
The unknown, pronumeral and variable 215
Algebraic expression problems 219
The classification of linear equations 223
Teaching and learning linear equations in a hierarchical level of complexity 229
Algebraic problem-solving in real life contexts 236
Transferability of algebraic problem-solving to the science curriculum 244
Summary 247

Chapter 9 Measurement and geometry
Gregory Hine
Introduction 249
The importance of learning geometry 251
The importance of learning measurement 251
Key terms 252
The concept of geometric proof 253
The concept of transformation 264
Using technology in measurement and geometry 277
Summary 282

Chapter 10 Statistics and probability
Robyn Reaburn
Introduction 284
Key terms 285
The need for data and its collection 288
Descriptive statistics, tables and graphs 292
Tabular and graphical displays 302
Probability 311
Putting it all together: statistical inference 320
Summary 324

Chapter 11 Functions: a unifying concept
Colin Carmichael
Introduction 326
Key terms 327
Functions and their settings 328
Functions at the transition 329
Developing functions through the early secondary years 334
Functions in the senior secondary school 342
Summary 353
# Chapter 12 Calculus

Robyn Reaburn

Preface

Teaching Secondary Mathematics has been written to enrich the professional lives of secondary mathematics educators at any stage of their careers. Throughout the text the audience has access to key theoretical and philosophical perspectives that have been the focus of much empirical research and that underpin best instructional practices within the secondary mathematics classroom. Additionally, various contemporary issues influencing the planning, teaching and evaluation of mathematical learning experiences have been included for reader consideration.

Within each of the 12 chapters, the needs of adolescent learners have been outlined carefully, together with pedagogical approaches educators can use to respond effectively to these needs. At the conclusion of each chapter, readers are provided with various activities to consolidate and extend their learning. First, reflective questions that link closely to the topics presented are offered for individual or collaborative response. Second, a variety of engaging mathematics activities – which are strategically linked to Cambridge HOTmaths – provides teachers of middle and senior school students with resources to use immediately in the classroom. At the time of publication, Teaching Secondary Mathematics reflects the thinking and content available in the most current version of the Australian Curriculum.

The authors of the chapters are notable academics hailing from a broad range of Australian universities, and who in their current roles prepare the next generation of mathematics teachers in Australia. Their professional classroom experience and engagement with cutting-edge research combine to produce a clear ‘mathematical voice’ which resonates in the summaries, insights, teachings, questions and reflections presented. Although the text has been authored primarily for an Australian audience, it is hoped that this voice will inspire and challenge mathematics teachers everywhere for years to come.

How to use HOTmaths with this book

Once you have registered your HOTmaths access code (see the inside front cover of this book), for subsequent visits the below navigation instructions provide a general overview of the main HOTmaths features used within this textbook.

Log in to your account via at www.hotmaths.com.au.

This will take you to your Dashboard. The different HOTmaths streams can be accessed via the Course dropdown, located on the left-hand side of the toolbar. Here you can change the Course list (stream) and Course (year level), then select a Topic and Lesson from the respective lists.
Most lessons contain a number of interactive and printable activities, which can be accessed via the links on the right-hand side of the orange lesson toolbar. These include: **Resources, Walkthroughs and Questions**. The Resources tab contains the **demonstrations** (videos), **widgets** (animations) and **HOTSheets** (activities) associated with that particular lesson.

You can also access specific widgets and HOTSheets quickly using the search function, found on the right-hand side of the main toolbar. Upon searching the name of any widget or HOTSheet, the results page will display widgets based on the keywords searched – as denoted by the ‘widget’ tab being highlighted in blue. If you are looking for a HOTSHEET, simply click onto the ‘HOTSheets’ tab and these results will appear. Using the ‘Magic puzzles’ HOTSHEET as an example, searching this name and clicking on the ‘HOTSheets’ results tab will provide you a link to the Magic puzzles HOTSHEET.

Please note that given its nature HOTmaths is constantly being updated. All pathways and references are up to date as of May 2016 and every effort has been made to provide you with an accurate picture of the functions within HOTmaths.
