

CONTENTS

CHAPTER I

FIRST PRINCIPLES

ART.	PAGE
1. The Science of Thermodynamics	1
2. Heat-Engine and Heat-Pump	1
3. Efficiency of a Heat-Engine	2
4. Coefficient of Performance of a Refrigerating Machine	2
5. Working Substance	2
6. Operation of the Working Substance in a Heat-Engine	3
7. Cycle of Operations of the Working Substance	4
8. The First Law of Thermodynamics	5
9. Internal Energy	5
10. Work done in Changes of Volume of a Fluid	6
11. Indicator Diagrams	7
12. Units of Force, Pressure, and Work	8
13. Units of Heat	9
14. Mechanical Equivalent of Heat	10
15. Scales of Temperature	11
16. Reckoning of Temperature from the "Absolute Zero"	13
17. Properties of Gases: Charles' Law and Boyle's Law	14
18. Notion of a "Perfect" Gas	14
19. Internal Energy of a Gas: Joule's Law	16
20. Specific Heats of a Gas	19
21. Constancy of the Specific Heats in a Perfect Gas	21
22. Reversible Actions	21
23. Adiabatic Expansion	23
24. Isothermal Expansion	23
25. Adiabatic Expansion of a Perfect Gas	24
26. Change of Temperature in the Adiabatic Expansion of a Perfect Gas	25
27. Work done in the Adiabatic Expansion of a Perfect Gas	25
28. Isothermal Expansion of a Perfect Gas	26
29. Summary of Results for a Perfect Gas	27
30. Fundamental Questions of Heat-Engine Efficiency	28
31. The Second Law of Thermodynamics	28
32. Reversible Heat-Engine. Carnot's Cycle of Operations	29
33. Carnot's Principle	30
34. Reversibility the Criterion of Perfection in a Heat-Engine	31
35. Efficiency of a Reversible Heat-Engine	31
36. Carnot's Cycle with a Perfect Gas for Working Substance	32
37. Reversal of this Cycle	34
38. Efficiency of Any Reversible Engine	35
39. Summary of the Argument	36

x CONTENTS

ART.	PAGE
40. Absolute Zero of Temperature	37
41. Conditions of Maximum Efficiency	38
42. Thermodynamic Scale of Temperature	41
43. Reversible Engine receiving Heat at Various Temperatures	44
44. Entropy	46
45. Conservation of Entropy in Carnot's Cycle	47
46. Entropy-Temperature Diagram for Carnot's Cycle	48
47. Entropy-Temperature Diagrams for a Series of Reversible Engines	49
48. No change of Entropy in Adiabatic Processes	50
49. Change of Entropy in an Irreversible Operation	50
50. Sum of the Entropies in a System	51
51. Entropy-Temperature Diagrams	52
52. Perfect Engine using Regenerator	54
53. Stirling's Regenerative Air-Engine	55
54. Joule's Air-Engine	57

CHAPTER II

PROPERTIES OF FLUIDS

55. States of Aggregation or Phases	60
56. Formation of a Vapour under Constant Pressure	61
57. Saturated and Superheated Vapour	62
58. Relation of Pressure to Temperature in Saturated Steam	62
59. Tables of the Properties of Steam	64
60. Specific Volume of Dry Saturated Steam	65
61. Boiling and Evaporation	66
62. Mixture of Vapour with other Gases: Dalton's Principle	66
63. Evaporation into a Space containing Air: Saturation of the Atmosphere with Water-Vapour	66
64. Heat required for the Formation of Steam under Constant Pressure: Heat of the Liquid and Latent Heat	68
65. Total External Work done	69
66. Internal Energy of a Fluid	69
67. The "Total Heat" of a Fluid	70
68. Change of the Total Heat during Heating under Constant Pressure	71
69. Application to Steam formed under Constant Pressure, from Water at 0° C.	71
70. Total Heat of a mixture of Liquid and its Saturated Vapour	73
71. Total Heat of Superheated Vapour	73
72. Constancy of the Total Heat in a Throttling Process	75
73. Entropy of a Fluid	76
74. Mixed Liquid and Vapour: Wet Steam	77
75. Specification of the State of any Fluid	78
76. Isothermal Expansion of a Fluid: Isothermal Lines on the Pressure-Volume Diagram	79
77. The Critical Point: Critical Temperature and Critical Pressure	81

ART.	PAGE
78. Adiabatic Expansion of a Fluid	82
79. Supersaturation	85
80. Change of Internal Energy and of Total Heat in Adiabatic Expansion, "Heat-Drop"	86

CHAPTER III

THEORY OF THE STEAM-ENGINE AND OTHER
VAPOUR ENGINES

81. Carnot's Cycle with Steam or other Vapour for Working Substance	88
82. Efficiency of a Perfect Steam-Engine. Limits of Temperature .	90
83. Entropy-Temperature Diagram for a Perfect Steam-Engine .	91
84. Use of "Boundary Curves" in the Entropy-Temperature Diagram	92
85. Modified Cycle omitting Adiabatic Compression	94
86. Engine with Separate Organs	96
87. The Rankine Cycle	98
88. Efficiency of a Rankine Cycle	99
89. Calculation of the Heat-Drop	100
90. The Function G	102
91. Extension of the Rankine Cycle to Steam supplied in any State .	103
92. Rankine Cycle with Steam initially Wet	104
93. Rankine Cycle using Superheated Steam	105
94. Reversibility in the Rankine Cycle	108
95. Effect of Incomplete Expansion	110
96. Modified Cycle with Regenerative Feed-heating	112
97. Binary Vapour Engines	113
98. Clapeyron's Equation	114
99. Further Applications of Clapeyron's Equation. The Triple Point .	115
100. Entropy-Temperature Chart of the Properties of Steam	117
101. Mollier's Chart of Entropy and Total Heat	120
102. Other Forms of Chart	124
102 <i>a</i> . Entropy-Temperature Diagrams of Various Fluids	125
103. Effects of Throttling	126
104. The Heat-Account in a Real Process	128

CHAPTER IV

THEORY OF REFRIGERATION

105. The Refrigeration Process	132
106. Reversible Refrigerating Machine	133
107. Conservation of Entropy in a Perfect Refrigerating Process .	135
108. Ideal Coefficients of Performance	135
109. The Working Fluid in a Refrigerating Process	136
110. The Actual Cycle of a Vapour-Compression Refrigerating Machine	137
111. Entropy-Temperature Diagram for the Vapour-Compression Cycle	141

ART.	PAGE
112. Refrigerating Effect and Work of Compression expressed in Terms of the Total Heat	143
113. Charts of Total Heat and Entropy for Substances used in the Vapour-Compression Process	144
114. Applications of the $I\phi$ Chart in studying the Vapour-Compression Process	148
114 <i>a.</i> Multiple-Effect Compression and Precooling of the Liquid by Partial Throttling	152
115. Entropy-Temperature Chart for Carbon Dioxide in the Gaseous, Liquid and Solid States	153
115 <i>a.</i> Mollier's PI Diagram for Carbon Dioxide	154
116. Vapour-Compression by means of a Jet. Water-Vapour Machine	157
117. The Step-down in Temperature. Use of an Expansion Cylinder in Machines using Air	157
118. Direct Application of Heat to produce Cold. Absorption Machines	160
119. Limit of Efficiency in the Use of High-temperature Heat to Produce Cold	164
120. Expression in Terms of the Entropy	167
121. The Refrigerating Machine as a means of Warming	169
121 <i>a.</i> The "Cold Multiplier"	170
122. The Attainment of Very Low Temperature. Cascade Method	171
123. Regenerative Method	173
124. Regenerative Method. First Stage	174
125. Regenerative Method. Second Stage	177
126. Linde's Apparatus	178
127. Liquefaction by Expansion in which Work is done. Apparatus of Claude, etc.	180
128. Separation of the Chief Constituents of Air	184
129. Baly's Curves	187
130. More Complete Rectification	191
130 <i>a.</i> Separation of Other Constituents of Air	193

CHAPTER V

JETS AND TURBINES

131. Theory of Jets	195
132. Form of the Jet (De Laval's Nozzle)	197
133. Limitation of the Discharge through an Orifice of Given Size	201
134. Application to Air	203
135. Application to Steam	203
136. Comparison of Metastable Expansion with Equilibrium Expansion	206
137. Measure of Supersaturation	208
138. Retarded Condensation	208
139. Action of Steam in a Nozzle, continued	210
140. Effects of Friction	211
141. Application to Turbines	216
142. Simple Turbines	217

CONTENTS

xiii

ART.	PAGE
143. Compound Turbines	218
144. Theoretical Efficiency-Ratio	218
145. Action in Successive Stages	219
146. Stage Efficiency and Reheat Factor	220
147. Real Efficiency-Ratio	221
148. Types of Turbines	222
149. Performance of a Steam Turbine	224
150. Utilization of Steam. Low Pressure and High Pressure	224

CHAPTER VI

INTERNAL-COMBUSTION ENGINES AND PROPERTIES
OF GASES

151. Internal Combustion	227
152. The Four-Stroke Cycle	228
153. The Clerk or Two-Stroke Cycle	228
154. Ideal Action	229
155. Air Standard	231
156. Constant-Pressure Type	234
157. Diesel Engine	236
158. Combustion of Gases. Molecular Weights and Volumes	237
159. Avogadro's Principle	240
160. The Gramme-Molecule and Avogadro's Number	241
161. The Universal Gas-Constant	241
162. Specific Heats of Gases in Relation to their Molecular Weights. Volumetric Specific Heats	243
163. Summary of Methods of expressing the Specific Heats	244
164. Measured Values of Specific Heats	244
165. Variation of Specific Heat with Temperature	245
166. Internal Energy of a Gas	247
167. Curve of Internal Energy for a Typical Gas-Engine Mixture	248
168. The Process of Explosive Combustion	250
169. Effect of Turbulence	252
170. "Knocking"	252
170 a. Fuels for Petrol-Engines	253
171. Radiation in Explosions	254
172. Dissociation	256

CHAPTER VII

MOLECULAR THEORY OF GASES

173. Pressure due to Molecular Impacts	257
174. Boyle's, Avogadro's, and Dalton's Laws	261
175. Perfect and Imperfect Gases	261
176. Calculation of the Velocity of Mean Square	262
177. Average Distance Apart	263

ART.	PAGE
178. Internal Energy and Specific Heat	263
179. Energy of Vibration	267
180. Departure from the Principle of Equipartition	268
181. The Quantum Theory. Planck's Formula	269
182. Molecular Rotations: Limits imposed by the Quantum Theory	273

CHAPTER VIII

GENERAL THERMODYNAMIC RELATIONS

183. Introduction	276
184. Functions of the State of a Fluid	276
185. Relation of any one Function of the State to two others	277
186. Energy Equations and Relations deduced from them	280
187. Expressions for the Specific Heats C_p and C_v	282
188. Further deductions from the Equations for E and I	285
189. The Joule-Thomson Effect	286
190. Unresisted Expansion	289
191. Slopes of Lines in the $I\phi$, $T\phi$, and IP charts, for any Fluid	290
192. Application to a Mixture of Liquid and Vapour in Equilibrium: Clapeyron's Equation. Change of Phase	293
193. Compressibility and Elasticity of a Fluid	296
194. Collected Results	297
195. Heterogeneous Systems	299

CHAPTER IX

APPLICATIONS TO PARTICULAR FLUIDS

196. Characteristic Equation	303
197. Characteristic Equation of a Perfect Gas	303
198. Isothermal and Adiabatic Expansion of an Ideal Gas	305
199. Entropy, Energy and Total Heat of an Ideal Gas	306
200. Ratio of Specific Heats. Method of inferring γ in Gases from the Observed Velocity of Sound	306
201. Measurement of γ by Adiabatic Expansion. Method of Clément and Desormes	307
202. Effect of Imperfection of the Gas on the Ratio of Specific Heats	308
203. Relation of the Cooling Effects to the Coefficients of Expansion	309
204. Forms of Isothermals. Diagrams of P and V , and of PV and P	311
205. Imperfect Gases. Amagat's Isothermals of PV and P	312
206. Isothermals on the Pressure-Volume Diagram	315
207. Continuity of Liquid and Gas	316
208. Van der Waals' Characteristic Equation	317
209. Critical Point according to Van der Waals' Equation	321
210. Corresponding States	322
211. Van der Waals' Equation only Approximate	324
212. Other Characteristic Equations: Clausius, Dieterici	326
213. Callendar's Equation	329
214. Deductions from the Callendar Equation	332

CONTENTS

xv

ART.	PAGE
215. Total Heat and Entropy of Water	335
216. Steam Tables	336

CHAPTER X

EFFECTS OF SURFACE TENSION ON CONDENSATION
AND EBULLITION

217. Nature of Surface Tension	339
218. Energy Stored in a Surface Layer	339
219. Need of a Nucleus	341
220. Kelvin's Principle	343
221. Ebullition	346
222. Action of Silica Gel	348

CHAPTER XI

GAS-MIXTURES AND SOLUTIONS

223. Mixture of Gases	349
224. Diffusion an Irreversible Process	350
225. Action of a Semi-permeable Membrane	351
226. Planck's Device for Separating Mixed Gases	352
227. Solutions	353
228. Osmotic Pressure	354
229. Van't Hoff's Principle	355
230. Vapour-Pressure of a Solution	356
231. Boiling Point and Freezing Point	357
232. Solution of a Gas in a Liquid	358

CHAPTER XII

ELECTROLYTIC TRANSFORMATIONS AND
THERMOELECTRIC EFFECTS

233. Electrolytic Transformations	361
234. Action of a Galvanic Cell	362
235. Calculation of the Electromotive Force. Gibbs-Helmholtz Equation	363
236. Alternative Method of establishing the Gibbs-Helmholtz Equation	364
237. Thermoelectric Circuits. Peltier Effect and Thomson Effect	366
238. Calculation of the Peltier and Thomson Effects. Thermoelectric Power of a Pair. Thermoelectric Diagram	367

APPENDIX

TABLES OF THE PROPERTIES OF STEAM

TABLE	PAGE
A. Properties of Saturated Steam, in relation to the Temperature	373
A'. Properties of Water at Saturation Pressure	374
B. Properties of Saturated Steam, in relation to the Pressure	375
C. Volume of Steam in the Dry State	377
D. Total Heat of Steam in the Dry State	379
E. Entropy of Steam in the Dry State	381
INDEX	383
