

INDEX

- 3-subgroups lemma, 303
- admissible set, 72
 height of an element, 72
- Alperin's fusion theorem, 5
 for fusion systems, 13, 14
- Alperin's weight conjecture, 290
- axioms
 for a linking system
 axioms (A1), (A2), (B), (C), 140
 for normality
 extension condition, 26
 Frattini condition, 26
 invariance condition, 26
 for saturation
 extension axiom, 9
 Sylow axiom, 9
- Baumann pair, 95
- Bender group, 78
- block, 225
 covering another block, 294
 decomposition of, 225
 lift of, 265
 nilpotent, 286
 principal, 274
- Bousfield-Kan p -completion, 113
- Brauer
 (A, b, G) -Brauer pair, 241
 (A, G) -Brauer pair, 235
 characterization of characters, 261
 correspondent, 271
 first main theorem, 270
 homomorphism, 228, 233, 253
 inclusion of Brauer pairs, 236
 pair, 235
 second main theorem, 271
 third main theorem, 274
- Broué's Abelian Defect Group
 Conjecture, 291
- Burnside's fusion theorem, 6, 302
- Campbell pair, 95, 96
- Cartan map, 263
- Cartan matrix, 263
- Cartan number, 263
- category/categories
 bar resolution of, 171
 equivalence of, 123
 geometric realization of, 122
 nerve of, 122
- central idempotent, 225
- character(s), 266
 Brauer, 267
 irreducible Brauer, 267
 modular irreducible, 266
 ordinary irreducible, 266
 height zero, 293
- characteristic biset, 42–45, 163, 165
- class function, 266
- classifying space of a group, 103
- CW complex, 109
- Dade P -algebra, 286
 primitive, 286
- decomposition
 map, 264
 matrix, 264
 number, 264
- defect group, 255
- Donovan conjecture
 strong, 277
 weak, 277
- \mathcal{F} -block, 284
- \mathcal{F} -conjugate elements, 8
- \mathcal{F} -isomorphic elements, 273
- finite group
 centric linking category of, 133
 component of, 303
 fusion category of, 5, 116
 p -constrained, 21
 quasisimple, 303
 transporter category of, 133
- focal subgroup theorem, 6, 33
- Fourier inversion formula, 268
- Frobenius normal p -complement
 theorem, 6
- Frobenius Relations, 228
- fusion preserving isomorphism, 116
- fusion subsystem, 26
 centralizer, 68
 condition (N1), 62
 \mathcal{F} -Frattini, 61
 \mathcal{F} -invariant, 26, 60
 generalized Fitting subsystem, 69
 normal, 26, 62
 of index prime to p , 33–38, 160
 of p -power index, 33–34, 160
 weakly normal, 26, 155
- fusion system(s), 7
 of b , 255

- of kGb , 255
 - automorphism of, 152
 - Baumann characteristic two, 89
 - Baumann component type, 89
 - center of, 18
 - central product, 68
 - centralizer, 52
 - centric subgroup, 52
 - characteristic p -type, 87
 - component, 69
 - component type, 87
 - composition factor, 77
 - composition series, 73
 - constrained, 21, 53, 54, 175
 - model for, 21
 - even characteristic, 89
 - even component type, 89
 - exotic, 8, 209
 - \mathcal{F} -characteristic subgroup, 95
 - \mathcal{F} -invariant map, 66
 - constricted, 66
 - factor system, 56
 - fundamental group and covering
 - spaces of, 160
 - generated by certain morphisms or
 - subsystems, 13
 - \mathcal{H} -generated, 15
 - \mathcal{H} -saturated, 15
 - indecomposable, 212
 - Jordan-Hölder Theorem, 77
 - L-balance, 69
 - local CK-system, 93
 - local subsystem, 52
 - local theory, 49
 - model, 54
 - morphism of, 52
 - surjective, 52
 - N-system, 100
 - normal map, 66
 - normal subgroup, 53
 - normalizer, 52
 - normalizer fusion subsystem, 23
 - product of, 29
 - Puig solvable, 80
 - pushing up, 94
 - quasisimple, 69
 - realizable, 8
 - reduced, 210
 - S_3 -free, 98
 - saturated, 7
 - simple, 26, 69
 - solvable, 80
 - tame, 211
- G -algebra, 226
 - interior, 226
- generalised decomposition number, 272
- Glauberman's Z^* -theorem, 5, 18
- Glauberman-Niles pair, 96
- Goldschmidt group, 78
- Green's indecomposability theorem, 272
- Grothendieck group, 263
- group
 - p -solvable, 293
 - B-Conjecture, 92
 - characteristic p -type, 87
 - classifying space of, 103
 - component type, 87
 - cover of, 293
 - discrete p -toral, 167
 - finite group of Lie type, 293
 - N-group, 99
 - p-Bender, 83
 - p-Goldschmidt, 82
 - p -solvable, 81
 - section, 98
 - S_n -free, 98
 - sporadic, 293
 - standard component, 91
 - Unbalanced Group Conjecture, 92
 - Weyl, 293
- group of Lie type
 - fundamental subgroup, 90
- Higman's criterion, 259
- homotopic maps, 106
- homotopy colimit, 197
- homotopy decompositions, 197–204, 207–208
 - centralizer decomposition, 208
 - normalizer decomposition, 208
 - subgroup decomposition, 200
- homotopy equivalence, 106
- homotopy functor, 202
 - rigidification of, 202
- homotopy type, 106
- hyperfocal subgroup theorem, 6, 33
- idempotent(s), 223
 - (primitive)decomposition of, 223
 - lifting, 223
 - associated to, 235
 - containment of, 224
 - orthogonal, 223

- primitive, 223
- Jacobson radical, 223
- $k(b)$ conjecture, 277
- \mathcal{K} -group, 93
- Külshammer-Puig class, 283, 292
- linking subsystem
 - normal, 155
- linking system(s)
 - automorphism group of, 153, 163, 184
 - centric, 140
 - existence and uniqueness of, 182, 202
 - extension of, 157
 - geometric realization of
 - cohomology of, 163
 - covering space of, 158, 160
 - fundamental group of, 159
 - isomorphism of, 146
 - of group, 133
 - quasicentric, 145
