

LONDON MATHEMATICAL SOCIETY LECTURE NOTE SERIES

Managing Editor: Professor M. Reid, Mathematics Institute,
University of Warwick, Coventry CV4 7AL, United Kingdom

The titles below are available from booksellers, or from Cambridge University Press at
www.cambridge.org/mathematics

- 287 Topics on Riemann surfaces and Fuchsian groups, E. BUJALANCE, A.F. COSTA & E. MARTÍNEZ (eds)
- 288 Surveys in combinatorics, 2001, J.W.P. HIRSCHFELD (ed)
- 289 Aspects of Sobolev-type inequalities, L. SALOFF-COSTE
- 290 Quantum groups and Lie theory, A. PRESSLEY (ed)
- 291 Tits buildings and the model theory of groups, K. TENT (ed)
- 292 A quantum groups primer, S. MAJID
- 293 Second order partial differential equations in Hilbert spaces, G. DA PRATO & J. ZABCZYK
- 294 Introduction to operator space theory, G. PISIER
- 295 Geometry and integrability, L. MASON & Y. NUTKU (eds)
- 296 Lectures on invariant theory, I. DOLGACHEV
- 297 The homotopy category of simply connected 4-manifolds, H.-J. BAUES
- 298 Higher operads, higher categories, T. LEINSTER (ed)
- 299 Kleinian groups and hyperbolic 3-manifolds, Y. KOMORI, V. MARKOVIC & C. SERIES (eds)
- 300 Introduction to Möbius differential geometry, U. HERTRICH-JEROMIN
- 301 Stable modules and the D(2)-problem, F.E.A. JOHNSON
- 302 Discrete and continuous nonlinear Schrödinger systems, M.J. ABLOWITZ, B. PRINARI & A.D. TRUBATCH
- 303 Number theory and algebraic geometry, M. REID & A. SKOROBOGATOV (eds)
- 304 Groups St Andrews 2001 in Oxford I, C.M. CAMPBELL, E.F. ROBERTSON & G.C. SMITH (eds)
- 305 Groups St Andrews 2001 in Oxford II, C.M. CAMPBELL, E.F. ROBERTSON & G.C. SMITH (eds)
- 306 Geometric mechanics and symmetry, J. MONTALDI & T. RATIU (eds)
- 307 Surveys in combinatorics 2003, C.D. WENSLEY (ed.)
- 308 Topology, geometry and quantum field theory, U.L. TILLMANN (ed)
- 309 Corings and comodules, T. BRZEZINSKI & R. WISBAUER
- 310 Topics in dynamics and ergodic theory, S. BEZUGLYI & S. KOLYADA (eds)
- 311 Groups: topological, combinatorial and arithmetic aspects, T.W. MÜLLER (ed)
- 312 Foundations of computational mathematics, Minneapolis 2002, F. CUCKER *et al* (eds)
- 313 Transcendental aspects of algebraic cycles, S. MÜLLER-STACH & C. PETERS (eds)
- 314 Spectral generalizations of line graphs, D. CVETKOVIC, P. ROWLINSON & S. SIMIĆ
- 315 Structured ring spectra, A. BAKER & B. RICHTER (eds)
- 316 Linear logic in computer science, T. EHRHARD, P. RUET, J.-Y. GIRARD & P. SCOTT (eds)
- 317 Advances in elliptic curve cryptography, I.F. BLAKE, G. SEROUSSI & N.P. SMART (eds)
- 318 Perturbation of the boundary in boundary-value problems of partial differential equations, D. HENRY
- 319 Double affine Hecke algebras, I. CHEREDNIK
- 320 L-functions and Galois representations, D. BURNS, K. BUZZARD & J. NEKOVAŘ (eds)
- 321 Surveys in modern mathematics, V. PRASOLOV & Y. ILYASHENKO (eds)
- 322 Recent perspectives in random matrix theory and number theory, F. MEZZADRI & N.C. SNAITH (eds)
- 323 Poisson geometry, deformation quantisation and group representations, S. GUTT *et al* (eds)
- 324 Singularities and computer algebra, C. LOSSEN & G. PFISTER (eds)
- 325 Lectures on the Ricci flow, P. TOPPING
- 326 Modular representations of finite groups of Lie type, J.E. HUMPHREYS
- 327 Surveys in combinatorics 2005, B.S. WEBB (ed)
- 328 Fundamentals of hyperbolic manifolds, R. CANARY, D. EPSTEIN & A. MARDEN (eds)
- 329 Spaces of Kleinian groups, Y. MINSKY, M. SAKUMA & C. SERIES (eds)
- 330 Noncommutative localization in algebra and topology, A. RANICKI (ed)
- 331 Foundations of computational mathematics, Santander 2005, L.M. PARDO, A. PINKUS, E. SÜLI & M.J. TODD (eds)
- 332 Handbook of tilting theory, L. ANGELERI HÜGEL, D. HAPPEL & H. KRAUSE (eds)
- 333 Synthetic differential geometry (2nd Edition), A. KOCK
- 334 The Navier–Stokes equations, N. RILEY & P. DRAZIN
- 335 Lectures on the combinatorics of free probability, A. NICA & R. SPEICHER
- 336 Integral closure of ideals, rings, and modules, I. SWANSON & C. HUNEKE
- 337 Methods in Banach space theory, J.M.F. CASTILLO & W.B. JOHNSON (eds)
- 338 Surveys in geometry and number theory, N. YOUNG (ed)
- 339 Groups St Andrews 2005 I, C.M. CAMPBELL, M.R. QUICK, E.F. ROBERTSON & G.C. SMITH (eds)
- 340 Groups St Andrews 2005 II, C.M. CAMPBELL, M.R. QUICK, E.F. ROBERTSON & G.C. SMITH (eds)
- 341 Ranks of elliptic curves and random matrix theory, J.B. CONREY, D.W. FARMER, F. MEZZADRI & N.C. SNAITH (eds)
- 342 Elliptic cohomology, H.R. MILLER & D.C. RAVENEL (eds)
- 343 Algebraic cycles and motives I, J. NAGEL & C. PETERS (eds)
- 344 Algebraic cycles and motives II, J. NAGEL & C. PETERS (eds)

- 345 Algebraic and analytic geometry, A. NEEMAN
- 346 Surveys in combinatorics 2007, A. HILTON & J. TALBOT (eds)
- 347 Surveys in contemporary mathematics, N. YOUNG & Y. CHOI (eds)
- 348 Transcendental dynamics and complex analysis, P.J. RIPPON & G.M. STALLARD (eds)
- 349 Model theory with applications to algebra and analysis I, Z. CHATZIDAKIS, D. MACPHERSON, A. PILLAY & A. WILKIE (eds)
- 350 Model theory with applications to algebra and analysis II, Z. CHATZIDAKIS, D. MACPHERSON, A. PILLAY & A. WILKIE (eds)
- 351 Finite von Neumann algebras and masas, A.M. SINCLAIR & R.R. SMITH
- 352 Number theory and polynomials, J. MCKEE & C. SMYTH (eds)
- 353 Trends in stochastic analysis, J. BLATH, P. MÖRTERS & M. SCHEUTZOW (eds)
- 354 Groups and analysis, K. TENT (ed)
- 355 Non-equilibrium statistical mechanics and turbulence, J. CARDY, G. FALKOVICH & K. GAWEDZKI
- 356 Elliptic curves and big Galois representations, D. DELBOURGO
- 357 Algebraic theory of differential equations, M.A.H. MACCALLUM & A.V. MIKHAILOV (eds)
- 358 Geometric and cohomological methods in group theory, M.R. BRIDSON, P.H. KROPHOLLER & I.J. LEARY (eds)
- 359 Moduli spaces and vector bundles, L. BRAMBILA-PAZ, S.B. BRADLOW, O. GARCÍA-PRADA & S. RAMANAN (eds)
- 360 Zariski geometries, B. ZILBER
- 361 Words: Notes on verbal width in groups, D. SEGAL
- 362 Differential tensor algebras and their module categories, R. BAUTISTA, L. SALMERÓN & R. ZUAZUA
- 363 Foundations of computational mathematics, Hong Kong 2008, F. CUCKER, A. PINKUS & M.J. TODD (eds)
- 364 Partial differential equations and fluid mechanics, J.C. ROBINSON & J.L. RODRIGO (eds)
- 365 Surveys in combinatorics 2009, S. HUCZYNSKA, J.D. MITCHELL & C.M. RONEY-DOUGAL (eds)
- 366 Highly oscillatory problems, B. ENGQUIST, A. FOKAS, E. HAIRER & A. ISERLES (eds)
- 367 Random matrices: High dimensional phenomena, G. BLOWER
- 368 Geometry of Riemann surfaces, F.P. GARDINER, G. GONZÁLEZ-DIEZ & C. KOUROUNIOTIS (eds)
- 369 Epidemics and rumours in complex networks, M. DRAIEF & L. MASSOULIÉ
- 370 Theory of p -adic distributions, S. ALBEVERIO, A.YU. KHRENNIKOV & V.M. SHELKOVICH
- 371 Conformal fractals, F. PRZYTYCKI & M. URBĄŃSKI
- 372 Moonshine: The first quarter century and beyond, J. LEPOWSKY, J. MCKAY & M.P. TUIE (eds)
- 373 Smoothness, regularity, and complete intersection, J. MAJADAS & A. G. RODICIO
- 374 Geometric analysis of hyperbolic differential equations: An introduction, S. ALINHAC
- 375 Triangulated categories, T. HOLM, P. JØRGENSEN & R. ROUQUIER (eds)
- 376 Permutation patterns, S. LINTON, N. RUŠKUC & V. VATTER (eds)
- 377 An introduction to Galois cohomology and its applications, G. BERHUY
- 378 Probability and mathematical genetics, N. H. BINGHAM & C. M. GOLDIE (eds)
- 379 Finite and algorithmic model theory, J. ESPARZA, C. MICHAUX & C. STEINHORN (eds)
- 380 Real and complex singularities, M. MANOEL, M.C. ROMERO FUSTER & C.T.C WALL (eds)
- 381 Symmetries and integrability of difference equations, D. LEVI, P. OLVER, Z. THOMOVA & P. WINTERNITZ (eds)
- 382 Forcing with random variables and proof complexity, J. KRAJÍČEK
- 383 Motivic integration and its interactions with model theory and non-Archimedean geometry I, R. CLUCKERS, J. NICAISE & J. SEBAG (eds)
- 384 Motivic integration and its interactions with model theory and non-Archimedean geometry II, R. CLUCKERS, J. NICAISE & J. SEBAG (eds)
- 385 Entropy of hidden Markov processes and connections to dynamical systems, B. MARCUS, K. PETERSEN & T. WEISSMAN (eds)
- 386 Independence-friendly logic, A.L. MANN, G. SANDU & M. SEVENSTER
- 387 Groups St Andrews 2009 in Bath I, C.M. CAMPBELL *et al* (eds)
- 388 Groups St Andrews 2009 in Bath II, C.M. CAMPBELL *et al* (eds)
- 389 Random fields on the sphere, D. MARINUCCI & G. PECCATI
- 390 Localization in periodic potentials, D.E. PELINOVSKY
- 391 Fusion systems in algebra and topology M. ASCHBACHER, R. KESSAR & B. OLIVER
- 392 Surveys in combinatorics 2011, R. CHAPMAN (ed)
- 393 Non-abelian fundamental groups and Iwasawa theory, J. COATES *et al* (eds)
- 394 Variational Problems in Differential Geometry, R. BIELAWSKI, K. HOUSTON & M. SPEIGHT (eds)
- 395 How groups grow, A. MANN
- 396 Arithmetic Differential Operators over the p -adic Integers, C.C. RALPH & S.R. SIMANCA
- 397 Hyperbolic geometry and applications in quantum Chaos and cosmology, J. BOLTE & F. STEINER (eds)
- 398 Mathematical models in contact mechanics, M. SOFONEA & A. MATEI
- 399 Circuit double cover of graphs, C.-Q. ZHANG
- 400 Dense sphere packings: a blueprint for formal proofs, T. HALES
- 401 A double Hall algebra approach to affine quantum Schur–Weyl theory, B. DENG, J. DU & Q. FU
- 402 Mathematical aspects of fluid mechanics, J. ROBINSON, J. L. RODRIGO & W. SADOWSKI
- 403 Foundations of computational mathematics, Budapest 2011, F. CUCKER, T. KRICK, A. PINKUS & A. SZANTO

<i>List of contributors</i>	<i>page</i> vii
<i>Preface</i>	ix
1 John Williams Calkin: a short biography <i>S. Hassi, H.S.V. de Snoo and F.H. Szafraniec</i>	1
2 On Calkin's abstract symmetric boundary conditions <i>S. Hassi and H.L. Wietsma</i>	3
2.1 Introduction	3
2.2 Preliminaries	5
2.3 Reduction operators	10
2.4 Maximal symmetric extensions and unbounded reduction operators	23
3 Boundary triplets and maximal accretive extensions of sectorial operators <i>Y. Arlinskiĭ</i>	35
3.1 Introduction	35
3.2 Preliminaries	38
3.3 Friedrichs and Kreĭn-von Neumann extensions	43
3.4 Boundary pairs and closed forms associated with m-sectorial extensions	45
3.5 Boundary triplets and m-accretive extensions	47
3.6 W_F - and Q_F -functions	52
3.7 Realization of the Phillips boundary space	54
3.8 Vishik-Birman-Grubb type formulas	55
3.9 m-sectorial extensions via fractional-linear transformations	57
3.10 Sectorial operators in divergence form	60
4 Boundary control state/signal systems and boundary triplets <i>D.Z. Arov, M. Kurula and O.J. Staffans</i>	73

4.1	Introduction	73
4.2	Boundary control systems	74
4.3	Conservative state/signal systems in boundary control	76
4.4	An example: the transmission line	78
4.5	The connection to boundary triplets	81
5	Passive state/signal systems and conservative boundary relations <i>D.Z. Arov, M. Kurula and O.J. Staffans</i>	87
5.1	Introduction	87
5.2	Continuous-time state/signal systems	88
5.3	Passive and conservative state/signal systems	94
5.4	The frequency domain characteristics of a s/s system	104
5.5	Conservative boundary relations	107
5.6	Conclusions	116
6	Elliptic operators, Dirichlet-to-Neumann maps and quasi boundary triples <i>J. Behrndt and M. Langer</i>	121
6.1	Introduction	121
6.2	Boundary triples and Weyl functions for ordinary and partial differential operators	126
6.3	Quasi boundary triples and their Weyl functions	135
6.4	Quasi boundary triples for elliptic operators and Dirichlet-to-Neumann maps	147
7	Boundary triplets and Weyl functions. Recent developments <i>V.A. Derkach, S. Hassi, M.M. Malamud and H.S.V. de Snoo</i>	161
7.1	Introduction	161
7.2	Preliminaries	165
7.3	Ordinary boundary triplets	172
7.4	Boundary triplets of bounded type	175
7.5	Boundary triplets of bounded type and infinite dimensional graph perturbations	184
7.6	Unitary boundary relations and Weyl families	188
7.7	Generalized resolvents and unitary boundary triplets	201
7.8	Isometric boundary mappings	205
8	Extension theory for elliptic partial differential operators with pseudodifferential methods <i>G. Grubb</i>	221
8.1	Introduction	221
8.2	Elliptic boundary value problems	222
8.3	Pseudodifferential operators	226

Contents

vii

8.4	Pseudodifferential boundary operators	228
8.5	Extension theories	232
8.6	Implementation of the abstract set-up for elliptic operators	237
8.7	Resolvent formulas	243
8.8	Applications of pseudodifferential methods I: Conditions for lower boundedness	244
8.9	Applications of pseudodifferential methods II: Spectral asymptotics	247

Preface

The theory of unbounded operators, which dates back to the early 1930s, was developed by J. von Neumann and M.H. Stone. Of course the earlier work of H. Weyl on boundary eigenvalue problems and of T. Carleman on singular integral operators should be mentioned as stepping stones for the general abstract treatment. One of the underlying ideas was to put quantum mechanics on a rigorous mathematical foundation. J. von Neumann used a distinction between symmetric (Hermitian) and selfadjoint (hypermaximal) operators and referred to E. Schmidt for this. Once this distinction was made, it was natural to determine all selfadjoint extensions of a symmetric operator (necessarily with equal deficiency indices). J. von Neumann gave such a description for densely defined symmetric operators by means of his well-known formulas. This description requires the knowledge of the deficiency spaces of the symmetric operator. Another approach involving abstract boundary conditions was developed by J.W. Calkin in his 1937 Harvard doctoral dissertation, which was written under the direction of Stone, who suggested the topic. Unfortunately Calkin's work on boundary value problems did not receive the attention it deserved; probably because he never returned to it after his mathematical work related to World War II.

A revival of interest in applications of this approach to boundary value problems is due to M.G. Kreĭn, M.I. Vishik, M.S. Birman, and R. S. Phillips in the 1950s and, later, to G. Grubb, F.S. Rofe-Beketov, and M.L. Gorbachuk. The notion of boundary triplet was proposed in the 1970s by A.N. Kochubei and V.M. Bruk. The boundary triplet idea was used to introduce the associated Weyl function: an abstract analog of the classical Titchmarsh-Weyl m -function. This function formed a connection with the classical work of M.A. Naimark and M.G. Kreĭn from the early 1940s about exit space extensions. A densely defined symmetric operator with possibly unequal deficiency indices always has selfadjoint extensions once exit space extensions are allowed. In fact, Kreĭn had discovered the formula bearing his name describing the resolvents of the

selfadjoint extensions, possibly in exit spaces; this procedure involves an operator-valued analytic function, the so-called Q -function, which equals the above Weyl function up to an additive constant. In the same period, during the 1970s, the theory was facilitated by the systematic introduction of the notion of linear relation (multivalued linear operator), so that it was not necessary to restrict attention to densely defined operators any longer. The background of this extension employed an idea of von Neumann, which was to use the graph to analyze an unbounded operator.

In Kreĭn's formula the Weyl function and a possibly multivalued parameter family play similar roles. A geometric interpretation of the Kreĭn formula gave rise to the notion of boundary relation by treating both the Weyl function and the parameter family on an even basis. The notion of boundary relation is based on an abstract form of Green's or Lagrange's identity, and this is where isometric and unitary relations in Kreĭn spaces come into play. Simultaneously, Kreĭn space methods received increasing attention in system theory. Recently, system theoretic equivalents for boundary triplets and boundary relations have been developed. The theory of boundary relations and triplets offers another approach to extension theory and operator theoretic methods to concrete boundary value problems. Various forms of boundary relations have appeared recently in conjunction with boundary value problems for elliptic operators (Dirichlet-to-Neumann mappings) and with local point interactions.

The idea of the present volume arose during a workshop at the Lorentz Center in Leiden, the Netherlands (December 14–December 18, 2009), entitled *Boundary relations, extension theory, and applications* and organized by the present editors. Several of the talks were devoted to recent developments in boundary triplet methods, system theory, and partial differential equations. This volume presents more or less a coherent presentation of these new developments with a historical review, beginning with Calkin's work from the late 1930s. Different aspects of boundary value problems are treated in contributions written by specialists in the field from their own point of view. We thank the Lorentz Center for their support in organizing the workshop and their hospitality during the conference. Moreover, we thank Sam Harrison of Cambridge University Press for his pleasant and constructive cooperation.

Seppo Hassi, Henk de Snoo and Franek Szafraniec
