

CONTENTS

<i>Preface</i>	<i>page v</i>
<i>Chapter 1. FOUNDATIONS</i>	
1·1 Introduction	1
1·2 Fluid kinematics	1
1·3 The equation of continuity	3
1·4 Euler’s equations of motion	4
1·5 Vorticity and circulation	10
1·6 Bernoulli’s equation	15
1·7 Source and doublet distributions	16
1·8 Green’s formulae	22
1·9 Vortex distributions	28
1·10 Two-dimensional flow	36
1·11 Viscous fluid flow	46
1·12 Boundary-layer theory	59
1·13 Turbulence	68
1·14 The Joukowski condition	72
1·15 The wake	75
<i>Chapter 2. AEROFOIL THEORY FOR STEADY FLOW IN TWO DIMENSIONS</i>	
2·1 General	80
2·2 Blasius’s formulae	80
2·3 The law of Kutta–Joukowski	85
2·4 Joukowski aerofoils	91
2·5 Conjugate functions	101
2·6 Theodorsen’s method	103
2·7 Lighthill’s method	111
2·8 Thin aerofoil theory	117
2·9 Goldstein’s approximate method	130
2·10 The two-dimensional biplane	137
2·11 Flow through a cascade of aerofoils	147
2·12 Profile drag	159

*Chapter 3. AEROFOIL THEORY FOR STEADY FLOW
IN THREE DIMENSIONS*

3·1	Introduction	<i>page</i> 169
3·2	Aerodynamic forces	171
3·3	Lifting-line theory	183
3·4	Compound lifting units	203
3·5	Variational principles	216
3·6	Source and doublet representations	225
3·7	The rectangular wing	232
3·8	Vortex theory	237
3·9	The acceleration potential, circular wings	249
3·10	Theory of aerofoils of small aspect ratio	269
3·11	Wind-tunnel interference	280

Chapter 4. AEROFOILS IN COMPRESSIBLE FLOW

4·1	Introduction	298
4·2	Linearized theory of subsonic flow	316
4·3	The hodograph method for two-dimensional subsonic flow	330
4·4	Higher order theories in subsonic flow	343
4·5	Linearized theory of supersonic flow	348
4·6	Two-dimensional problems in the linearized theory of super- sonic flow	369
4·7	Methods based on distributions of supersonic sources: the symmetric case	380
4·8	Linearized theory of wings at incidence in supersonic flow	396
4·9	The method of special coordinates	415
4·10	Cone fields	432
4·11	Other methods and problems in the linearized theory of supersonic flow	445
4·12	Higher order theories of supersonic flow	453
4·13	Transonic flow	473

CONTENTS ix

Chapter 5. THEORY OF AEROFOILS IN UNSTEADY MOTION

5.1	Introduction	<i>page</i> 481
5.2	Aerofoil theory for unsteady incompressible flow	484
5.3	Two-dimensional motion with constant forward velocity	494
5.4	Motion with non-uniform average velocity	514
5.5	Three-dimensional incompressible unsteady flow	526
5.6	Aerofoil theory for unsteady subsonic compressible flow	530
5.7	Aerofoil theory for unsteady supersonic flow	539
	<i>List of principal symbols</i>	551
	<i>Additional recent references</i>	554
	<i>Index of authors</i>	559
	<i>Index of subjects</i>	562
