	<i>Preface</i>	page xi		Discussion	107
	<i>Acknowledgements</i>	xiii		Conclusion	107
<b>1</b>	<b>Introduction</b>	1	<b>7</b>	<b>Nutrient-status banding: Colour banding</b>	108
	Physiography and river environments	1		Summary	108
	EEC macrophytes	5		Introduction	108
	Determinants of vegetation in the wide geographic region of the EEC ( <i>South Norway, Denmark, The Netherlands, Belgium, Luxembourg, Britain, Ireland, Germany, France (mainland), Corsica, Sardinia, Sicily, Italy (mainland)</i> )	5		Earlier nutrient-banding schemes	109
<b>2</b>	<b>River development</b>	10		The Colour band system ( <i>Introduction, Description of the bands, Order of the species, Naming of communities</i> )	111
	Summary	10		Rock type and chemical associations with Colour band ( <i>Colour band and rock type, Nutrient analyses, Colour bands and Cation numbers, Unusual assemblages, Effects of water force, silt and peat, Effects of downstream eutrophication</i> )	113
	Introduction	10		Colour band assemblages in different countries ( <i>Britain, The Netherlands, Germany, Denmark, Belgium (with Luxembourg), Italy, France, South Norway, Wide-ranging assemblages</i> )	139
	River geography ( <i>Geology, Quaternary glaciations</i> )	11		Variations in species banding in different countries	155
	Prehistory and history	13		Colour band difficulties	155
<b>3</b>	<b>River classification</b>	23		Man's effect on nutrient status	158
	Summary	23	<b>8</b>	<b>Plant responses to rock type and nutrient regime</b>	159
	Introduction	23		Summary	159
	Classifications other than that used in this book ( <i>Drainage and profiles, Flow, Animal classifications, Plant classifications, Biotypology</i> )	23		Introduction	159
	Macrophyte classification for this book ( <i>Water force, Classification factors – Rock type, Stream size, Landscape</i> )	27		Influences of rock type on vegetation ( <i>Resistant rocks, Sandstones, Limestones, Clays, Muschelkalk, Alluvium, moraine, loess, etc.</i> )	159
	The Cover-Diversity number ( <i>Effects of landscape and downstream changes, Effects of management</i> )	44		Effect of rock type on nutrient patterns	163
<b>4</b>	<b>Climate</b>	49		Nutrient patterns of different species ( <i>Star diagrams of individual species, Species assemblages, Nutrient analyses</i> )	163
	Summary	49		Uptake and accumulation of nutrients ( <i>Uptake and movement within the plant, Nutrient relations in sediments, Water relations, Conclusions</i> )	167
	Bioclimate	49		Downstream eutrophication	169
	Regional variations in precipitation and influence of rock type on the effect of precipitation on streams	52	<b>9</b>	<b>Geographic distribution</b>	170
	Distribution of river plants in Europe in relation to climate	54		Summary	170
	Temperature and the Lemnaceae	55		Introduction	170
<b>5</b>	<b>River discharges</b>	55		Total EEC distributions of aquatic macrophytes	170
	Summary	55		Watercourse distribution maps and their validity	171
	Discharge in relation to climate, physiography and geology	55		Major geographic zones	172
	Sediment load and solute content	59		Regions with plentiful and negligible vegetation and the causes for this	174
	Storm flow and flooding	64		Species distributions in watercourses ( <i>Fringing herbs, Tall monocotyledons, Water-supported species of more eutrophic habitats (Mauve–Red Colour bands), Species of oligotrophic and dystrophic habitats (Brown–Yellow Colour bands), Other species</i> )	177
	Regional characteristics in the EEC ( <i>Britain, Ireland, Denmark, Germany, France, Italy</i> )	65		Species distributions within countries	186
	Drainage basins: pattern and process	67	<b>10</b>	<b>Factors causing changes in rivers with particular reference to the twentieth century</b>	190
	Alterations to drainage patterns	68		Summary	190
<b>6</b>	<b>Species distribution in relation to physical factors</b>	68		Introduction	190
	Summary	68		Early vegetation	190
	Introduction	68			
	Flow, substrate, width, depth and turbidity	69			
	Introduction to histogram analysis of plant distributions	70			
	Species distribution in relation to physical factors in all countries	75			
	Species distribution in relation to physical factors in different countries ( <i>Flow, Substrate, Depth, Width, Turbidity</i> )	78			

## Contents

Precipitation	191
River discharges	191
Navigation	192
Mills and barriers (controls)	193
Reservoirs and regulation	195
Water transfers	196
Abstraction	196
Water-cress beds ( <i>Rorippa nasturtium-aquaticum</i> )	196
Drainage, drainage improvement schemes, maintenance and excavation dredging	197
Water meadows and other penned water systems	198
Drainage and irrigation	200
Arableisation	202
Roads, towns, villages, etc.	203
Conclusion	203
<b>11 Changes in vegetation during a decade</b>	204
Summary	204
Introduction	204
The measurement and assessment of change ( <i>Changes over 1–4(+) years, Types of changes in vegetation, Changes over 4–9 years</i> )	205
Effects of the 1976 drought on river parameters ( <i>Diversity, Depth, Flow, Drying, Changes in macrophytes</i> )	211
Changes in canal vegetation	216
Discussion	217
<b>12 Downstream changes</b>	218
Summary	218
Introduction	218
River Maps ( <i>Britain, Germany, Denmark, Belgium, Luxembourg, Ireland, France (mainland), Corsica, Sardinia, Sicily, Italy (mainland)</i> )	219
<b>13 Plant communities in Britain</b>	239
Summary	239
Introduction	239
Lowland limestone streams of the south and east ( <i>Chalk streams, Oolite streams</i> )	241
Limestone streams of the north and west	243
Lowland sandstone streams of the south and east ( <i>Main type, Acid sands streams</i> )	243
Sandstone streams of the north and west ( <i>Upland streams, Mountain and Alpine streams, Lowland streams, Caithness</i> )	243
Clay streams ( <i>Lowland streams, Hill streams</i> )	246
Resistant rock streams ( <i>Lowland and bog-plain streams, Hill (upland, mountain and Alpine) streams</i> )	247
Coal Measures streams	247
Streams of catchments with mixed rock types	247
Dykes and drains, canals	248
<b>14 Plant communities in Germany</b>	249
Summary	249
Introduction	249
Limestone streams ( <i>Lowland-type mountain streams, Alpine limestone streams (and Alpine Resistant rock streams), Other streams</i> )	252
Calcareous moraine streams	256
Neutral moraine streams	257
Eutrophic moraine streams	257
Muschelkalk streams ( <i>Lowland and upland streams, Mountain streams</i> )	258
Chalk streams	259
Watercourses of alluvial (and other recent deposit) plains and low-lying ground to the north ( <i>Ost Friesland, Other areas</i> )	259
Rolling lowland sandstone streams	261
Streams of the Lüneberger Heide	261
Watercourses of Schleswig Holstein	262
Hill sandstone streams ( <i>Pfalzer, Hunsruck, etc., Schwarzwald</i> )	263
Alpine and mountain Resistant rock streams ( <i>Alpine streams, Dissected plateaux and other mountain streams</i> )	264

## viii

Upland Resistant rock streams ( <i>Bayerischer Wald, etc., Oberpfalz</i> )	266
Lowland Resistant rock streams	266
<b>15 Plant communities in Denmark</b>	267
Summary	267
Introduction	267
Clay streams	270
Moraine sands streams	271
Fluvial sands streams	273
Chalk streams	274
Channels on coastal plains	274
<b>16 Plant communities in Belgium</b>	275
Summary	275
Introduction	275
Channels on the coastal plain	278
Clay and fertile sands streams	278
Lowland mix streams	280
Acid sands streams	280
South-eastern Belgian Lorraine (sandstone, etc.) streams	281
Resistant rock streams ( <i>Western (Hainault etc.), Ardennes</i> )	281
<b>17 Plant communities in Luxembourg</b>	283
Summary	283
Introduction	283
Lowland sandstone, etc. streams	285
Hilly Resistant rock streams	285
<b>18 Plant communities in Ireland</b>	286
Summary	286
Introduction	286
Limestone streams ( <i>Lowland streams, Mountain and upland streams</i> )	288
Resistant rock streams ( <i>Lowland streams, Mountain and upland streams</i> )	291
Streams on other rock types ( <i>Sandstone, Clay, Coal Measures</i> )	292
<b>19 Plant communities in The Netherlands</b>	294
Summary	294
Introduction	294
The assessment of vegetation quality	297
Introduction to plant communities	298
Drier ditches	299
Watercourses on sand ( <i>Terrace sands at higher levels, Low-lying sands</i> )	299
Watercourses on peat	301
Watercourses on clay	302
<b>20 Plant communities in (mainland) France</b>	306
Summary	306
Introduction	306
Limestone streams ( <i>Lowland (Jurassic) limestone streams, Chalk streams, Upland limestone streams, Mountain limestone streams, Alpine limestone streams, Hill limestone streams of the south</i> )	310
Muschelkalk streams	315
Clay streams	316
Sandstone streams ( <i>Main lowland sandstone streams, Streams on the very fertile sandstones, Southern and lowland–upland sandstone streams, Mountain sandstone streams, Central acid sands streams, Acid sands/alluvium streams of Gironde–Les Landes, Acid sands/Resistant rock streams in Brittany</i> )	316
Resistant rock streams ( <i>Lowland–upland Resistant rock streams in the north (apart from Brittany), Resistant rock streams of the Massif Central foothills, Resistant rock streams in the Massif Central, Resistant rock streams in the Vosges mountains, Resistant rock streams in the Alps, Resistant rock streams in the Pyrenees</i> )	322
Watercourses on coastal alluvial plains ( <i>North-western area, Western area, Rhône delta</i> )	324
Watercourses on inland alluvium and moraine	325

## Contents

ix

<b>21</b>	<b>Plant communities in (mainland) Italy</b>	327	<b>27</b>	<b>Management and related interference II</b>	420
	Summary	327		Summary	420
	Introduction	327		Trees and shading ( <i>Introduction, Landscape, Control of stream vegetation</i> )	420
	Channels of the Po plain ( <i>Clay-derived flowing channels south of the Po, Dykes and drains, Watercourses along the northern edge of the Po plain, Lime-rich flowing channels north of the Po</i> )	330		Dredging and channelling ( <i>Dredging management, River management, Drainage patterns</i> )	423
	Upland (inland) Piedmont streams	336		Cutting	425
	Alpine streams in the west	337		Weed control by fish	427
	Streams in the northern Alps	337		Grazing by domestic animals	427
	Streams in the north (western) Apennines	337		Land tenure and administration of water channels	428
	Streams in the central Apennines	337		General management	429
	North-western coastal streams	337	<b>28</b>	<b>Pollution patterns</b>	431
	Carrara marble streams	338		Summary	431
	Dykes and drains of the Pisa plain	338		Introduction	431
	Western coastal streams	338		Long-distance pollution and recovery from pollution with space (downstream self-purification) ( <i>Britain, Belgium, Luxembourg, Germany, Denmark, Ireland, France, Italy (mainland), Sicily, Sardinia, Non-EEC countries</i> )	432
	Dykes and drains of the Latina plain	339		Recovery from pollution with time	442
	Streams of the southern Apennines	340		Countries with much pollution	444
	Streams in the far south	340		Reductions in diversity ( <i>South Norway, Denmark, Ireland, France, Germany, Italy, The Netherlands, Belgium, Conclusions</i> )	444
	Salt pan channels of Apulia	342		Pollution-tolerant species and their distribution ( <i>Classification of pollution-tolerant species, Pollution-tolerant species in streams, Damage-tolerant species in dykes, Pollution-tolerant species in relation to sites of low and high diversity</i> )	446
	Garigue streams of Apulia	342		Small tributaries in France and Belgium	453
	Eastern coastal streams	342		Increasing pollution in one river over 11 years	454
	South-north variation in vegetation	344		The work of Kohler and his associates and other similar researches ( <i>Changes over several years, Downstream changes, Transplant tests, Response to different chemicals</i> )	455
<b>22</b>	<b>Plant communities in Sicily, Sardinia and Corsica</b>	344		Causes of damage	461
	Summary	344	<b>29</b>	<b>Aspects of pollution</b>	462
	Introduction	344		Summary	462
	Communities in Sicily	348		Morphological effects of pollution ( <i>Decreased root development, Shoot habit and colour and development</i> )	462
	Communities in Sardinia	350		Nutrient status of pollution-related communities	464
	Communities in Corsica ( <i>Lowland streams, (Low) Mountain streams, Alpine mountain streams</i> )	351		Self-purification	465
	Discussion	353		Pollution by sewage and similar effluents	467
<b>23</b>	<b>Plant communities in south Norway</b>	356		Pollution by eutrophication	468
	Summary	356		Pollution by heavy metals ( <i>Danish ochre streams</i> )	468
	Introduction	356		Pollution by biocides, minor organics and similar substances	470
	River types	357		Pollution by fish farms	471
	Species distribution	358		Pollution by gravel extraction and quarries	471
	Communities in Vestfold	359		Pollution from rice paddies	471
	Communities in Ostfold (including part of Akerhus)	360		Pollution by wash-houses	471
<b>24</b>	<b>Community studies</b>	361		Pollution by hot water	472
	Summary	361		Pollution by acid precipitation	472
	Diversity and the definition of communities ( <i>Definition of communities, Diversity and management</i> )	361		Environmental impact ( <i>Belgium, Britain, Denmark, France, Germany, Ireland, Luxembourg, The Netherlands, Non-EEC countries</i> )	472
	Diversities in different countries	364	<b>30</b>	<b>Indices for damage and pollution</b>	474
	Phyto-sociology	364		Summary and Introduction	474
	Geographical trends in communities ( <i>Limestone, Sandstone, Clay, Resistant rock, Conclusions</i> )	375		Advantages and disadvantages of monitoring with macrophytes	474
	Structure and pattern	379		Areas where macrophyte indices can be used	475
	Separate river studies	379		Stream Damage Rating ( <i>Britain, Non-British EEC countries</i> )	476
	Non-EEC rivers	380		Stream Pollution Index	478
<b>25</b>	<b>Community interpretation</b>	380		Dyke and canal Damage Rating	479
	Summary	380		Stream index comparisons ( <i>An example of a comparison of macrophyte and invertebrate indices, General comparison of macrophyte and invertebrate indices, Comparison of plant indices</i> )	480
	Key species	380		<i>Appendixes</i>	484
	Core species ( <i>Size ii streams, Size iii streams, Habitat associations of core species. Group habitat associations of core species</i> )	380		<i>References</i>	485
	Distribution and pattern interpretation by $\chi^2$ analysis ( <i>Summary of factors used in classification, Detailed analysis of distributions in France, Conclusions from the <math>\chi^2</math> analyses</i> )	386		<i>Index</i>	504
	General river classification	394			
<b>26</b>	<b>Management and related interference I</b>	405			
	Summary	405			
	Canals and the effect of boats ( <i>Introduction, History and distribution, Effect of canalisation on downstream patterns of vegetation, Interactions between vegetation and boats</i> )	405			
	Herbicides and their effects	412			
	Groundwater	414			
	Dykes and their flood hazards ( <i>Water movement and plant obstructions, Indices for assessing acceptable quantities of vegetation</i> )	414
