# Contents

**Foreword** ix  
**Preface** xi  
**Abbreviations** xii

## Section 1 – The basics
1. General organization of the body  1  
2. Cell components and function  5  
3. Genetics  8  
4. The cell membrane  13  
5. Enzymes  18

## Section 2 – Respiratory physiology
6. Lung anatomy and function  21  
7. Oxygen transport  28  
8. Carbon dioxide transport  36  
9. Alveolar diffusion  40  
10. Ventilation and dead space  45  
11. Static lung volumes  50  
12. Spirometry  56  
13. Hypoxia and shunts  64  
14. Ventilation–perfusion relationships  69  
15. West zones  72  
16. Oxygen delivery and demand  74  
17. Alveolar gas equation  77  
18. Oxygen cascade  80  
19. Lung compliance  82  
20. Work of breathing  88  
21. Control of ventilation  92  
22. Pulmonary circulation  96  
23. Oxygen toxicity  102  
24. Ventilatory failure  104  
25. Anaesthesia and the lung  107

## Section 3 – Cardiovascular physiology
26. Cardiac anatomy and function  111  
27. Cardiac cycle  117  
28. Cardiac output and its measurement  120  
29. Starling’s law and cardiac dysfunction  130  
30. Pressure–volume loops  135  
31. Systemic circulation  141  
32. Arterial system  144  
33. Arterial pressure waveforms  150  
34. Capillaries and endothelium  153  
35. Venous system  158  
36. Venous pressure waveforms  161  
37. Lymphatics  164  
38. Cardiovascular reflexes  166  
39. Valsalva manoeuvre  171  
40. Exercise physiology  174

## Section 4 – Neurophysiology
41. Neuronal structure and function  183  
42. The brain  186  
43. Cerebrospinal fluid  191  
44. Blood–brain barrier  194  
45. Cerebral blood flow  197
Contents

46. Intracranial pressure and head injury 201
47. The spinal cord 207
48. Resting membrane potential 217
49. Nerve action potential and propagation 221
50. Synapses and the neuromuscular junction 228
51. Skeletal muscle 236
52. Muscle spindles and Golgi tendon organs 243
53. Smooth muscle 247
54. Cardiac muscle 250
55. The electrocardiogram 261
56. Autonomic nervous system 265
57. Pain physiology 269

Section 5 – Gastrointestinal tract
58. Saliva, oesophagus and swallowing 275
59. Stomach and vomiting 279
60. Gastrointestinal digestion and absorption 286
61. Liver anatomy and blood supply 292
62. Liver function 297

Section 6 – Kidney and body fluids
63. Renal function, anatomy and blood flow 305
64. Renal filtration and reabsorption 311
65. Renal regulation of water and electrolyte balance 316
66. Acid–base physiology 328

Section 7 – Blood and immune system
67. Haemostasis 337
68. Transfusion 345
69. Anaemia and polycythaemia 351
70. Immune system 355
71. Plasma constituents 366

Section 8 – Energy balance
72. Metabolism 369
73. Starvation 381
74. Stress response 384

Section 9 – Endocrine physiology
75. Hypothalamus and pituitary 387
76. Thyroid, parathyroid and adrenal 392

Section 10 – Developmental physiology
77. Maternal physiology during pregnancy 401
78. Fetal physiology 408
79. Paediatric physiology 416
80. Physiology of ageing 420

Section 11 – Environmental physiology
81. Altitude 425
82. Diving 429
83. Temperature regulation 431

Index 434
