## PART I. SINGLE VARIABLES

**Chapter 1. General Theory for a Single Variable**

1.1 Probability and frequency *page* 3

1.1.1 Notation, *p.* 4.

1.2 Expectation and variance *page* 5

1.3 Types of observed quantity *page* 7

1.4 Estimation *page* 8

1.4.1 The arithmetic mean, *p.* 10. 1.4.2 Example, *p.* 10.

1.5 Observations of different weight *page* 12

1.5.1 Example, *p.* 13. 1.5.2 Deviations from the weighted mean, *p.* 14.

1.5.3 Choice of appropriate standard deviation formula, *p.* 15. 1.5.3.1 Test

for concordance, *p.* 15. 1.5.4 Example, *p.* 16. 1.5.5 The combining of dis-

cordant observations, *p.* 17. 1.5.5.1 Example, *p.* 18.

1.6 Postulates leading to the arithmetic mean *page* 18

1.6.1 Minimum variance, *p.* 19. 1.6.2 Maximum likelihood, *p.* 19.

1.6.3 Efficiency, *p.* 20.

1.7 Moments and cumulants *page* 21

1.7.1 Characteristic function and cumulative function, *p.* 21. 1.7.2 The

inverse Fourier transform, *p.* 22. 1.7.3 Linear sum of independent variables,

*p.* 24. 1.7.4 Central limit theorem, *p.* 24.

1.8 Notes and references *page* 26

**Chapter 2. The Normal Distribution**

2.1 The gamma functions *page* 27

2.1.1 The normalizing factor, *p.* 28. 2.1.2 Moments, *p.* 28. 2.1.3 Cumulants,

*p.* 29. 2.1.4 Sum of normally distributed variables, *p.* 29.

2.2 Tables relating to the normal curve *page* 30

2.2.1 Testing of observed values, *p.* 30. 2.2.2 Double-tail tests, *p.* 31.

2.2.3 Probable error, *p.* 31.

2.3 Bivariate normal distribution *page* 32

2.3.1 Estimation of  $\rho$ , *p.* 33. 2.3.2 Expectation of product of absolute

values, *p.* 33.

2.4 The  $\chi^2$  distribution *page* 34

2.4.1 Properties of the  $\chi^2$  distribution, *p.* 36. 2.4.2 Expectation of  $\chi$ ,

*p.* 37. 2.4.3 The  $\chi^2$  distribution with one degree of freedom, *p.* 38.

2.4.4 Addition of  $\chi^2$  values, *p.* 38.

## CONTENTS

2.5	The deviations from the true value	page 38
2.5.1	Rotation of coordinate axes, <i>p.</i> 39.	
2.5.2	The residuals, <i>p.</i> 40.	
2.5.3	The estimated variance, <i>p.</i> 41.	
2.5.4	Testing of estimated standard deviations, <i>p.</i> 41.	
2.6	Other estimates of standard deviation	page 42
2.6.1	Properties of the residuals, <i>p.</i> 42.	
2.6.2	The estimate $s_1$ , <i>p.</i> 42.	
2.6.3	Efficiency of $s_1$ , <i>p.</i> 43.	
2.6.4	Use of the estimate $s_1$ , <i>p.</i> 43.	
2.6.5	The mean range, <i>p.</i> 44.	
2.6.6	Grouping of observations when $n$ is large, <i>p.</i> 45.	
2.6.7	Use of the range estimate $s_R$ , <i>p.</i> 45.	
2.6.8	Example, <i>p.</i> 46.	
2.7	Notes and references	page 46
2.8	Tables	page 46

**Chapter 3. Some Statistical Tests**

3.1	Distributions of $F$ and $t$	page 48
3.1.1	Beta functions, <i>p.</i> 48.	
3.1.2	Distribution of $F$ , <i>p.</i> 49.	
3.1.3	Distribution of $t$ , <i>p.</i> 50.	
3.1.4	$t$ -test for linear function of the observed values, <i>p.</i> 51.	
3.2	Choice of significance level	page 51
3.2.1	Confidence intervals, <i>p.</i> 52.	
3.2.2	Fiducial intervals, <i>p.</i> 53.	
3.3	Testing the mean	page 55
3.3.1	Example, <i>p.</i> 55.	
3.3.2	Confidence interval, <i>p.</i> 55.	
3.4	Comparison of two means	page 56
3.4.1	Example, <i>p.</i> 56.	
3.5	Ratio of standard deviations unknown	page 56
3.5.1	Example, <i>p.</i> 57.	
3.5.2	Approximate distribution of $t_m$ , <i>p.</i> 58.	
3.5.3	Behrens' test, <i>p.</i> 58.	
3.5.4	Example, <i>p.</i> 59.	
3.6	Example of the use of the $F$ distribution to compare variances	page 59
3.6.1	$F$ -test for homogeneity, <i>p.</i> 60.	
3.6.2	Example, <i>p.</i> 60.	
3.7	The rejection of outlying observations	page 62
3.8	Notes and references	page 63
3.9	Tables	page 64

**Chapter 4. Discrete Distributions**

4.1	The binomial distribution	page 65
4.2	The testing of hypotheses by the $\chi^2$ test	page 66
4.2.1	Degrees of freedom, <i>p.</i> 67.	
4.2.2	Example <i>p.</i> 69.	
4.3	The Poisson distribution	page 69
4.3.1	The counting of particles, <i>p.</i> 69.	
4.3.2	Characteristic function, <i>p.</i> 70.	
4.3.3	Estimation, <i>p.</i> 71.	
4.3.4	Example, <i>p.</i> 71.	

## CONTENTS

vii

4.4	The Poisson distribution as the limiting form of the binomial distribution	<i>page 72</i>
4.5	Significance levels for the Poisson distribution	<i>page 73</i>
4.5.1	Tables of Poisson limits, <i>p. 73.</i>	
4.5.2	Example, <i>p. 74.</i>	
4.5.3	Effect of $r$ being limited to integral values, <i>p. 74.</i>	
4.5.4	The sum of two Poisson variables, <i>p. 75.</i>	
4.5.5	Comparison of two estimates of a Poisson parameter, <i>p. 75.</i>	
4.5.5.1	Example, <i>p. 76.</i>	
4.5.6	$F$ test for estimates of a Poisson parameter, <i>p. 77.</i>	
4.6	Counting losses	<i>page 77</i>
4.6.1	Counters with fixed resolving times, <i>p. 78.</i>	
4.6.2	Counters with extended resolving times, <i>p. 78.</i>	
4.6.3	Example, <i>p. 78.</i>	
4.6.4	Scaling circuits, <i>p. 79.</i>	
4.6.4.1	Example, <i>p. 80.</i>	
4.7	Notes and references	<i>page 80</i>
4.8	Tables	<i>page 80</i>

## PART II. REGRESSION THEORY AND THE STRAIGHT LINE

### *Chapter 5. Regression Curves and Functional Relationship*

5.1	Regression	<i>page 83</i>
5.1.1	The general regression curve, <i>p. 84.</i>	
5.1.2	Correlation ratio, <i>p. 84.</i>	
5.2	Types of variable	<i>page 85</i>
5.3	Estimation of the experimental regression curve	<i>page 86</i>
5.3.1	Postulates on which the estimation of regression curves may be based, <i>p. 87.</i>	
5.3.2	Weights, <i>p. 88.</i>	
5.3.3	Prediction, <i>p. 89.</i>	
5.4	The estimation of the error-free curve when the dependent variable is subject to error	<i>page 90</i>
5.4.1	Functional relationship, <i>p. 90.</i>	
5.4.2	Choice of independent variable in determining functional relationship, <i>p. 91.</i>	
5.5	The independent variable subject to error	<i>page 91</i>
5.5.1	Linear functional relationship, <i>p. 93.</i>	
5.5.2	Predetermined variables, <i>p. 94.</i>	
5.5.3	Other cases of coincidence, <i>p. 94.</i>	
5.6	Notes and references	<i>page 95</i>

### *Chapter 6. The Straight Line*

6.1	Normal equations	<i>page 96</i>
6.1.1	The origin of $x$ at the mean, <i>p. 97.</i>	
6.1.2	Standard deviations of the estimates, <i>p. 98.</i>	
6.1.3	Estimation of $\sigma$ from the residuals, <i>p. 99.</i>	
6.1.4	Example, <i>p. 100.</i>	
6.1.5	Variation of standard deviation of fitted value with location of point, <i>p. 100.</i>	
6.1.5.1	Example, <i>p. 102.</i>	
6.1.6	The straight line passing through the origin, <i>p. 102.</i>	
6.1.6.1	Example, <i>p. 103.</i>	
6.1.7	The bivariate normal distribution, <i>p. 104.</i>	

6.2	Statistical tests based on the normal law	<i>page</i> 105
6.2.1	Testing of slope, <i>p.</i> 106.	
6.2.2	Comparison of slopes and fitted values, <i>p.</i> 106.	
6.2.3	Example, <i>p.</i> 107.	
6.2.4	Tests for homogeneity, <i>p.</i> 108.	
6.2.4.1	Example, <i>p.</i> 109.	
6.2.4.2	Analysis of variance, <i>p.</i> 110.	
6.3	Equally-spaced observations of equal weight	<i>page</i> 110
6.3.1	Standard deviations, <i>p.</i> 111.	
6.3.2	Return to the original variable <i>p.</i> 112.	
6.3.2.1	Dependence of variance of slope on range and on number of observations, <i>p.</i> 112.	
6.3.3	Example, <i>p.</i> 113.	
6.3.4	The estimation of slope from successive differences, <i>p.</i> 114.	
6.3.4.1	Estimation of standard deviation, <i>p.</i> 115.	
6.3.4.2	Example, <i>p.</i> 115.	
6.3.5	Efficiency of $s_V$ , <i>p.</i> 116.	
6.3.6	Calculation of slope by double summation, <i>p.</i> 117.	
6.3.6.1	Example, <i>p.</i> 118.	
6.4	Other estimates of the slope	<i>page</i> 119
6.4.1	Step function methods for equally-spaced observations, <i>p.</i> 119.	
6.4.1.1	Optimum weights and steps, <i>p.</i> 121.	
6.4.1.2	Example, <i>p.</i> 122.	
6.4.2	Observations not equally-spaced, <i>p.</i> 123.	
6.4.3	Step function methods for unequally-spaced observations, <i>p.</i> 123.	
6.4.3.1	Estimation of fitted values, <i>p.</i> 123.	
6.4.3.2	Example, <i>p.</i> 125.	
6.4.4	Estimation of standard deviation, <i>p.</i> 125.	
6.4.5	Least-squares method with grouped observations, <i>p.</i> 125.	
6.4.5.1	The fitted curve, <i>p.</i> 126.	
6.4.5.2	Estimation of standard deviation, <i>p.</i> 127.	
6.4.5.3	Example, <i>p.</i> 128.	
6.4.6	Observations of different weight, <i>p.</i> 128.	
6.5	The independent variable subject to error	<i>page</i> 128
6.5.1	Estimation of regression lines, <i>p.</i> 128.	
6.5.2	The functional relationship, <i>p.</i> 129.	
6.5.2.1	Estimates of the slope, <i>p.</i> 130.	
6.5.2.2	Ratio of standard deviations constant, <i>p.</i> 131.	
6.5.3	Choice of equation for estimating the slope, <i>p.</i> 131.	
6.5.3.1	Example, <i>p.</i> 132.	
6.5.4	Estimation of standard deviations, <i>p.</i> 132.	
6.5.5	Least-squares postulates, <i>p.</i> 134.	
6.5.5.1	Maximum likelihood estimates, <i>p.</i> 135.	
6.5.6	The method of grouping with both variables subject to error, <i>p.</i> 136.	
6.5.6.1	Example, <i>p.</i> 137.	
6.5.6.2	Confidence limits in the method of grouping, <i>p.</i> 137.	
6.5.6.3	Approximate estimate of standard deviation of the slope, <i>p.</i> 138.	
6.6	Notes and references	<i>page</i> 138
6.7	Tables	<i>page</i> 139

## PART III. POLYNOMIALS AND OTHER CURVES

### *Chapter 7. Estimation of the Polynomial Coefficients*

7.1	The normal equations	<i>page</i> 147
7.1.1	Moments and sums of powers, <i>p.</i> 148.	
7.1.1.1	Example, <i>p.</i> 148.	
7.1.2	The method of single division, <i>p.</i> 151.	
7.1.3	The Gauss–Doolittle method, <i>p.</i> 153.	
7.1.4	The abbreviated Doolittle method, <i>p.</i> 155.	
7.1.5	The square root method, <i>p.</i> 156.	
7.1.6	The check column, <i>p.</i> 157.	
7.1.7	Changes of scale, <i>p.</i> 158.	
7.1.8	Example using the Doolittle scheme, <i>p.</i> 159.	
7.1.8.1	The abbreviated Doolittle scheme, <i>p.</i> 163.	
7.1.8.2	The square root scheme, <i>p.</i> 163.	

## CONTENTS

ix

7.2	Orthogonal polynomials	<i>page</i> 163
7.2.1	Independence of origin, <i>p.</i> 164.	
7.2.2	The fitted curve in terms of orthogonal polynomials, <i>p.</i> 165.	
7.2.3	Example, <i>p.</i> 169.	
7.2.4	The square root method, <i>p.</i> 170.	
7.2.4.1	Example, <i>p.</i> 171.	
7.2.4.2	Orthogonal polynomials with high-speed computers, <i>p.</i> 171.	
7.2.5	The use of residuals as a check on the arithmetical calculations, <i>p.</i> 172.	
7.2.5.1	Example, <i>p.</i> 174.	
7.2.6	Recurrence relations, <i>p.</i> 175.	
7.3	Matrix notation	<i>page</i> 176
7.3.1	The check column, <i>p.</i> 177.	
7.3.2	The square root method, <i>p.</i> 178.	
7.3.3	The inverse matrix, <i>p.</i> 178.	
7.3.4	Calculation of the inverse matrix from the values $\beta_{kj}$ , <i>p.</i> 178.	
7.3.4.1	Example, <i>p.</i> 179.	
7.3.5	Calculation of the inverse matrix from the values $\alpha_{kj}$ , <i>p.</i> 179.	
7.3.5.1	Example, <i>p.</i> 179.	
7.3.6	The omission of observations, <i>p.</i> 180.	
7.3.6.1	Example, <i>p.</i> 181.	
7.3.6.2	Derivation of equations, <i>p.</i> 182.	
7.3.6.3	The fitted values at the omitted points, <i>p.</i> 183.	
7.4	Changes of origin	<i>page</i> 184
7.4.1	Example, <i>p.</i> 185.	
7.5	Iterative methods for the solution of the normal equations	<i>page</i> 185
7.5.1	Von Seidel's method, <i>p.</i> 187.	
7.5.2	Relaxation method, <i>p.</i> 187.	
7.5.2.1	Example, <i>p.</i> 188.	
7.5.3	Group relaxations, <i>p.</i> 189.	
7.5.3.1	Example, <i>p.</i> 190.	
7.5.4	The method of steepest descent, <i>p.</i> 190.	
7.5.4.1	Example, <i>p.</i> 191.	
7.6	Equally-spaced observations of equal weight	<i>page</i> 193
7.6.1	The orthogonal polynomials $T_j(\epsilon)$ , <i>p.</i> 193.	
7.6.2	Fitting by power moments, <i>p.</i> 194.	
7.6.2.1	Example— $n$ even, <i>p.</i> 194.	
7.6.2.2	Example— $n$ odd, <i>p.</i> 196.	
7.6.2.3	Evaluation of residuals, <i>p.</i> 198.	
7.6.3	Fitting by orthogonal moments, <i>p.</i> 201.	
7.6.3.1	Tables of orthogonal polynomials, <i>p.</i> 202.	
7.6.3.2	Example, <i>p.</i> 202.	
7.6.3.3	Calculation of fitted values for polynomials of different degrees, <i>p.</i> 203.	
7.6.4	Other tables, <i>p.</i> 206.	
7.6.5	The fitted curve in terms of factorials, <i>p.</i> 207.	
7.6.5.1	Calculation of factorial moments, <i>p.</i> 208.	
7.6.5.2	Calculation of fitted values from the differences of zero, <i>p.</i> 209.	
7.6.5.3	Example, <i>p.</i> 209.	
7.7	Properties of the orthogonal polynomials for the equally-spaced case	<i>page</i> 211
7.7.1	The factorial coefficients $\beta_{(kj)}$ , <i>p.</i> 211.	
7.7.2	The sum of the squares of the orthogonal polynomial values, <i>p.</i> 213.	
7.7.3	Recurrence relations, <i>p.</i> 214.	
7.8	Equally-spaced observations with different weights	<i>page</i> 214
7.8.1	Factorial form of solution, <i>p.</i> 214.	
7.8.1.1	Example, <i>p.</i> 215.	
7.8.1.2	Calculation of factorial products by summation, <i>p.</i> 217.	
7.8.1.3	Factorial sums with the origin near the centre of the range, <i>p.</i> 218.	
7.8.2	Observations of equal weight, but some of the series missing, <i>p.</i> 219.	
7.8.2.1	Example, <i>p.</i> 221.	
7.8.2.2	Hartley's method, <i>p.</i> 222.	
7.8.2.3	Example, <i>p.</i> 223.	
7.8.2.4	Direct calculation of values at missed points, <i>p.</i> 223.	
7.8.2.5	Example, <i>p.</i> 225.	

<b>x</b>	<b>CONTENTS</b>	
7.9	Notes and references	<i>page</i> 226
7.10	Tables	<i>page</i> 226
 <i>Chapter 8. Standard Deviations of the Estimates</i>		
8.1	Formulae for variances	<i>page</i> 249
8.1.1	Estimation of $\sigma$ from the residuals, <i>p.</i> 250.	8.1.2 Example, <i>p.</i> 251.
8.1.3	Least-squares theory in matrix notation, <i>p.</i> 253.	8.1.3.1 Normal equations, <i>p.</i> 253.
	8.1.3.2 Standard deviation formulae, <i>p.</i> 254.	
8.2	Results based on the normal law	<i>page</i> 254
8.2.1	The distribution of $s^2$ , <i>p.</i> 254.	8.2.2 Tests of significance, <i>p.</i> 256.
	8.2.2.1 <i>F</i> -test for the degree of the polynomial, <i>p.</i> 257.	8.2.2.2 Example, <i>p.</i> 258.
	8.2.2.3 Analysis of variance table, <i>p.</i> 259.	8.2.3 Test for homogeneity, <i>p.</i> 259.
8.3	Minimum variance estimates	<i>page</i> 260
8.3.1	The normal equations for correlated variables, <i>p.</i> 261.	8.3.2 The generalized Gauss–Markoff theorem in matrix notation, <i>p.</i> 262.
8.4	Tables of standard deviations for the equally-spaced case	<i>page</i> 263
8.4.1	Variation of the standard deviation with the location of the point, <i>p.</i> 264.	8.4.2 The use of the tables, <i>p.</i> 266.
	8.4.2.1 Example, <i>p.</i> 266.	8.4.3 Rough approximations to the standard deviations, <i>p.</i> 266.
	8.4.4 Variance of the residuals, <i>p.</i> 266.	8.4.5 The polynomial coefficients, <i>p.</i> 268.
	8.4.5.1 Example, <i>p.</i> 269.	
8.5	Standard deviations in the unequally-spaced case	<i>page</i> 269
8.5.1	The smoothing of the points of observation, <i>p.</i> 269.	8.5.2 The parameters $\kappa_2$ and $\kappa_3$ , <i>p.</i> 270.
	8.5.2.1 Example, <i>p.</i> 271.	8.5.2.2 Range of the parameters $\kappa_2$ and $\kappa_3$ , <i>p.</i> 272.
	8.5.3 The orthogonal polynomials $T_j(X)$ , <i>p.</i> 272.	8.5.4 Standard deviations of the orthogonal coefficients, <i>p.</i> 273.
	8.5.5 Standard deviations of the fitted values, <i>p.</i> 273.	8.5.6 Estimation of standard deviations of fitted values from the tables in practical examples, <i>p.</i> 274.
	8.5.6.1 Example, <i>p.</i> 275.	8.5.7 Variation of standard deviations with range and number of observations, <i>p.</i> 275.
8.6	Optimum spacing of observations	<i>page</i> 276
8.6.1	Calculation of the polynomial, <i>p.</i> 278.	8.6.1.1 Example, <i>p.</i> 278.
8.7	Notes and references	<i>page</i> 280
8.8	Tables	<i>page</i> 281
 <i>Chapter 9. The Grouping of Observations</i>		
9.1	Equally-spaced observations	<i>page</i> 287
9.1.1	Example, <i>p.</i> 289.	9.1.2 Standard deviations of the orthogonal coefficients, <i>p.</i> 290.
	9.1.3 Efficiencies of the estimated coefficients $a_j$ , <i>p.</i> 290.	9.1.4 Standard deviations of the fitted values, <i>p.</i> 291.
	9.1.5 Estimation	

## CONTENTS

xi

of the standard deviation of an observation, *p.* 292. 9.1.5.1 Relation of certain least-squares estimates to estimates of lower efficiency, *p.* 293. 9.1.6 The dropping of observations before grouping, *p.* 294.

9.2 Step function methods *page* 296

9.2.1 Second-degree polynomials, *p.* 296. 9.2.2 Third-degree polynomials, *p.* 297. 9.2.3 The polynomial coefficients, *p.* 298. 9.2.4 The fitted values, *p.* 298. 9.2.5 Tables of step functions, *p.* 299. 9.2.6 Example, *p.* 299.

9.3 General summary for the equally-spaced case *page* 301

9.4 Unequally-spaced observations *page* 301

9.4.1 Least-squares curve fitted to the grouped estimates, *p.* 302. 9.4.2 Bias of the estimates, *p.* 304. 9.4.2.1 Checking for bias before grouping, *p.* 305. 9.4.3 Example, *p.* 306. 9.4.4 Grouped observations of different weight, *p.* 307.

9.5 Step function methods for the unequally-spaced case *page* 308

9.5.1 The second-degree polynomial, *p.* 308. 9.5.2 The third-degree polynomial, *p.* 310. 9.5.3 Tables of step functions, *p.* 310. 9.5.4 Example, *p.* 311. 9.5.5 Solution of non-symmetric equations, *p.* 312. 9.5.5.1 Example, *p.* 313. 9.5.6 Efficiencies for non-uniform spacing, *p.* 313.

9.6 General summary for the unequally-spaced case *page* 314

9.7 Notes and references *page* 315

9.8 Tables *page* 315

**Chapter 10. Functions which are not Polynomials**

10.1 Linear functions *page* 329

10.1.1 Example, *p.* 330. 10.1.2 Elimination of non-significant variables, *p.* 334.

10.2 Non-linear functions *page* 334

10.2.1 Change of variable, *p.* 334. 10.2.2 The simple exponential, *p.* 335. 10.2.2.1 Example, *p.* 335. 10.2.3 Linearization, *p.* 336. 10.2.3.1 Implicit functions, *p.* 337. 10.2.3.2 Example, *p.* 338.

10.3 Harmonic analysis *page* 341

10.3.1 Equally-spaced observations, *p.* 341. 10.3.2 *n* a multiple of four, *p.* 342. 10.3.3 Harmonic curve through all the points, *p.* 343. 10.3.4 Example, *p.* 344. 10.3.5 Amplitude and phase, *p.* 345. 10.3.5.1 Example, *p.* 346. 10.3.6 Correction for grouping, *p.* 346. 10.3.7 Observations over several periods, *p.* 347. 10.3.8 The search for unknown periods, *p.* 347. 10.3.9 Significance tests for the amplitude of a period, *p.* 348.

10.4 Smoothing *page* 349

10.4.1 Least-squares smoothing, *p.* 349. 10.4.2 Example, *p.* 350. 10.4.3 Fitted values at the ends of the range, *p.* 350. 10.4.3.1 Example, *p.* 351. 10.4.4 Summation formulae, *p.* 352. 10.4.4.1 Example, *p.* 353. 10.4.5 Comparison of smoothing methods, *p.* 353.

xii	CONTENTS	
10.5	Notes and references	page 355
10.6	Tables	page 356
<b>Chapter 11. General Regression and Functional Relationship Problems in Several Variables</b>		
11.1	Multiple regressions	page 360
11.1.1	Recurrence relations for partial correlation coefficients, <i>p.</i> 361.	
11.1.2	Calculation of the partial correlation coefficients, <i>p.</i> 362. 11.1.3 Example, <i>p.</i> 362. 11.1.4 Orthogonal functions, <i>p.</i> 363. 11.1.5 Significance test for a correlation coefficient, <i>p.</i> 364. 11.1.5.1 Example, <i>p.</i> 364. 11.1.6 Serial correlation of residuals, <i>p.</i> 365. 11.1.6.1 Example, <i>p.</i> 366.	
11.2	Two variables, functionally related and subject to error	page 366
11.2.1	Example, <i>p.</i> 367. 11.2.2 Geometrical interpretation, <i>p.</i> 368.	
11.3	General least-squares theory for functionally related variables	page 370
11.3.1	Example, <i>p.</i> 371. 11.3.2 Summary of standard deviation formulae, <i>p.</i> 373. 11.3.2.1 Example, <i>p.</i> 374. 11.3.2.2 The residuals, <i>p.</i> 374. 11.3.3 The general case in matrix notation, <i>p.</i> 375. 11.3.3.1 The normal equations, <i>p.</i> 376. 11.3.4 The covariance matrix for $\{\lambda, \mathbf{b}\}$ , <i>p.</i> 377. 11.3.4.1 The residuals, <i>p.</i> 378. 11.3.4.2 Covariance matrix for $\{\mathbf{u}, \mathbf{b}\}$ , <i>p.</i> 378. 11.3.5 Variance of a function, <i>p.</i> 379. 11.3.5.1 Special cases, <i>p.</i> 379. 11.3.5.2 Example, <i>p.</i> 380.	
11.4	Notes and references	page 381
<b>Chapter 12. Further Illustrative Examples</b>		
12.1	Guide to the more important calculating schemes	page 382
12.1.1	The straight line, <i>p.</i> 382. 12.1.2 Polynomials, <i>p.</i> 383. 12.1.3 Other functions, <i>p.</i> 385.	
12.2	The fitting of a straight line—variation of cosmic ray intensity with atmospheric pressure	page 385
12.3	A polynomial curve—calibration of a prism spectrometer	page 387
12.3.1	Use of a special function, <i>p.</i> 389.	
12.4	Polynomial with equally-spaced observations—variation of viscosity of water with temperature	page 396
12.5	A linear function—variation of vapour pressure of ethyl alcohol with temperature	page 401
12.6	A non-linear function—the counting rate of a type I counter	page 405
	<i>Bibliography</i>	page 410
	<i>Index</i>	page 418
