PREFACE *page xi*

ACKNOWLEDGEMENTS xiii

CHAPTER 1

Introduction

1.1. The use of X-rays for microscopy, p. 1. **1.2.** Contact microradiography, p. 2. **1.3.** Reflexion X-ray microscopy, p. 4. **1.4.** Point projection with X-rays, p. 7. **1.5.** Scanning methods, p. 9. **1.6.** Comparison with optical and electron microscopy, p. 9. **1.6.1.** Penetration and absorption in matter, p. 10. **1.6.2.** X-ray emission analysis, p. 11. **1.6.3.** Microdiffraction, p. 12. **1.6.4.** Stereomicroscopy, p. 12. **1.6.5.** Resolving-power, p. 13. **1.7.** Scope and applications of X-ray microscopy, p. 14. **1.7.1.** Materials opaque to light, p. 14. **1.7.2.** Structure of thick specimens, p. 14. **1.7.3.** Living organisms, p. 14. **1.7.4.** Quantitative microanalysis in biology, p. 15. **1.7.5.** Quantitative microanalysis of inorganic specimens, p. 15. **1.8.** Other X-ray methods, p. 16. **1.8.1.** 'Darkfield' imaging by the Berg-Barrett method, p. 16. **1.8.2.** Optical reconstruction of lattice structure, p. 17. **1.8.3.** Diffraction microscopy, p. 17.

CHAPTER 2

Contact Microradiography

2.1. Introduction, p. 19. **2.2.** Absorption of X-rays in matter, p. 21. **2.2.1.** Absorption coefficients, p. 22. **2.2.2.** Fluorescence radiation, p. 25. **2.2.3.** Absorption edges, p. 26. **2.3.** Optimum conditions for microradiography, p. 27. **2.3.1.** Wavelength and specimen thickness, p. 28. **2.3.2.** Choice of characteristic, continuous or fluorescent radiation, p. 33. **2.4.** Geometrical blurring of the micro-image, p. 34. **2.5.** Photographic and optical requirements, p. 37. **2.5.1.** High resolution emulsions, p. 37. **2.5.2.** Optical enlarging system, p. 40. **2.6.** Ultimate resolving-power of the contact method, p. 40. **2.6.1.** Unsharpness in image formation, p. 41. **2.6.2.** Image spread, p. 41. **2.6.3.** Size and aggregation of photographic grains, p. 42. **2.6.4.** Resolving-power of the enlarging system, p. 43. **2.6.5.** Contrast requirements, p. 43. **2.6.6.** Ultimate resolution, p. 43. **2.7.** Associated techniques of microradiography, p. 44. **2.7.1.** Stereomicroradiography, p. 44. **2.7.2.** Microfluoroscopy, p. 45. **2.7.3.** Electron microradiography, p. 45.

CHAPTER 3

Microscopy by Point Projection

3.1. Introduction, p. 48. **3.2.** The geometry of projection, p. 50. **3.3.** Fresnel diffraction, p. 54. **3.4.** Experimental systems, p. 58. **3.4.1.** Camera obscura, p. 58. **3.4.2.** Point anode tube, p. 59. **3.4.3.** Window target tube, p. 60.

3.5. Electron optical limitations, p. 62. **3.5.1.** Cathode emission, p. 62. **3.5.2.** Lens aberrations, p. 63. **3.6.** Target limitations, p. 66. **3.6.1.** Production and absorption of X-rays, p. 66. **3.6.2.** Thermal dissipation, p. 67. **3.6.3.** Electron scattering, p. 68. **3.6.4.** Choice of target material, p. 71. **3.7.** Photographing the image, p. 72. **3.8.** Comparison of the contact and projection methods, p. 74. **3.8.1.** Resolution, p. 74. **3.8.2.** Field of view, p. 74. **3.8.3.** Exposure-time, p. 77. **3.8.4.** Experimental convenience, p. 78. **3.9.** Intermediate magnifications, p. 80. **3.9.1.** Arbitrary magnification, p. 81. **3.9.2.** The times-two method, p. 84.

CHAPTER 4

Reflexion X-Ray Microscopy: Mirror Systems

4.1. Total reflexion of X-rays, p. 87. **4.2.** Dioptric focusing, p. 91. **4.3.** Focusing by total reflexion, p. 94. **4.4.** Aberrations of a cylindrical mirror of circular section, p. 98. **4.4.1.** Spherical aberration, p. 100. **4.4.2.** Coma, p. 102. **4.4.3.** Obliquity of the field, p. 103. **4.4.4.** Curvature of the field, p. 104. **4.5.** Astigmatism and distortion, p. 105. **4.6.** Compound systems of circular mirrors, p. 109. **4.7.** Compound systems of figured mirrors, p. 111. **4.8.** Practical design of the reflexion X-ray microscope, p. 114. **4.8.1.** Experimental arrangements, p. 116. **4.9.** Practical limitations, p. 118. **4.10.** The ultimate limit set by diffraction, p. 120.

CHAPTER 5

Reflexion X-Ray Microscopy: Curved Crystals

5.1. Efficiency of Bragg reflexion, p. 124. **5.2.** Focusing at glancing incidence, p. 126. **5.2.1.** Crystals curved at right angles to the plane of incidence, p. 127. **5.3.** Focusing at near normal incidence, p. 131. **5.4.** Focusing by ring mirrors, p. 136.

CHAPTER 6

X-Ray Absorption Microanalysis

6.1. Microanalysis by differential absorption, p. 139. **6.1.1.** Measurements at an absorption edge, p. 142. **6.1.2.** Microweighing and microanalysis, p. 144. **6.2.** Dry weight determination, p. 145. **6.2.1.** Principles of the method, p. 145. **6.2.2.** Microphotometry, p. 147. **6.2.3.** Experimental errors, p. 149. **6.2.4.** Resolving-power and limit of detection, p. 150. **6.2.5.** Improvements in the contact method, p. 151. **6.2.6.** Water content, p. 152. **6.3.** Absorption microspectrometry by the contact method, p. 153. **6.3.1.** Procedure, p. 153. **6.3.2.** The spectrometer, p. 156. **6.3.3.** Experimental errors, p. 157. **6.4.** Photographic considerations, p. 160. **6.4.1.** The characteristic curve, p. 160. **6.4.2.** Grain size and granularity, p. 163. **6.4.3.** Variation of sensitivity with wavelength, p. 165. **6.4.4.** Equivalent effective wavelength, p. 166. **6.5.** Absorption analysis by the projection method, p. 170. **6.5.1.** X-ray tube and spectrometer, p. 171. **6.5.2.** The recording system, p. 175. **6.5.3.** Errors in counter recording, p. 178. **6.5.4.** Comparison with the contact method, p. 181.

CONTENTS

vii

CHAPTER 7

X-Ray Emission Microanalysis

7.1. Emission microspectrometry, p. 183. **7.1.1.** Experimental conditions for direct excitation, p. 183. **7.1.2.** Corrections; limits of accuracy, p. 188. **7.1.3.** Discrimination between elements, p. 193. **7.1.4.** Comparison with other methods, p. 196. **7.2.** The static spot microanalyser, p. 197. **7.3.** The scanning microanalyser or flying-spot X-ray microscope, p. 202. **7.3.1.** Apparatus, p. 202. **7.3.2.** Applications, p. 205. **7.4.** Fluorescent microspectrometry, p. 206.

CHAPTER 8

Production of X-Rays

8.1. Electron emission and focusing, p. 212. **8.1.1.** General requirements, p. 212. **8.1.2.** Thermionic emission, p. 214. **8.1.3.** Field emission, p. 215. **8.2.** Heat dissipation in the target, p. 217. **8.2.1.** Thick target, p. 217. **8.2.2.** Thin target, p. 217. **8.2.3.** Needle target, p. 219. **8.2.4.** Heat balance in a thin target, p. 220. **8.3.** Electron range in the target, p. 222. **8.4.** Spectral distribution, p. 223. **8.5.** Efficiency of X-ray production, p. 226. **8.5.1.** The continuous spectrum, p. 226. **8.5.2.** The characteristic spectrum, p. 228. **8.6.** Angular distribution, p. 232. **8.7.** Filtration and other means of monochromatization, p. 236. **8.7.1.** Filters, p. 236. **8.7.2.** Self-filtration, p. 237. **8.7.3.** Total reflexion, p. 238. **8.7.4.** Crystal monochromators, p. 240.

CHAPTER 9

Specimen Preparation Techniques

9.1. Biological and medical specimens, p. 241. **9.1.1.** Freeze-drying, p. 241. **9.1.2.** Embedding and sectioning, p. 242. **9.1.3.** Injection and staining, p. 244. **9.1.4.** Mounting the specimen for contact microradiography, p. 246. **9.1.5.** Mounting the specimen for projection or reflexion X-ray microscopy, p. 249. **9.1.6.** Living organisms, p. 249. **9.2.** Metallurgical and industrial specimens, p. 250. **9.2.1.** Sectioning by grinding, p. 251. **9.2.2.** Shadow-casting and replica methods, p. 252.

CHAPTER 10

Techniques of Contact Microradiography

10.1. Apparatus for contact microradiography, p. 254. **10.1.1.** General considerations, p. 254. **10.1.2.** Apparatus for hard radiation ($< 2 \text{ \AA}$), p. 256. **10.1.3.** Apparatus for soft radiation ($2\text{--}10 \text{ \AA}$), p. 258. **10.1.4.** Apparatus for ultra-soft radiation ($> 10 \text{ \AA}$), p. 260. **10.2.** Recording the microradiograph, p. 263. **10.2.1.** Photographic considerations, p. 263. **10.2.2.** Optical enlargement, p. 263. **10.3.** Stereoscopic microradiography, p. 264. **10.4.** Microfluoroscopy, p. 266.

CHAPTER 11

Techniques of Projection Microscopy

11.1. The electron gun, p. 270. **11.2.** The focusing system, p. 272. **11.2.1.** Single-stage demagnification, p. 273. **11.2.2.** Two-stage demagnification, p. 273. **11.2.3.** Astigmatism and its correction, p. 276. **11.2.4.** Comparison of electrostatic and magnetic lenses, p. 279. **11.3.** Constructional details, p. 281. **11.3.1.** Magnetic lens model, p. 281. **11.3.2.** Electrostatic lenses, p. 284. **11.4.** Mechanical and electrical stability, p. 285. **11.5.** Electrical supplies, p. 288. **11.6.** Vacuum requirements, p. 289. **11.7.** Microscope alinement, p. 291. **11.8.** Microscope focusing, p. 292. **11.9.** Photographic recording, p. 296. **11.10.** Stereographic projection, p. 296. **11.11.** Transmission targets, p. 300. **11.12.** Maintenance of projection X-ray microscopes, p. 303. **11.13.** Commercial models of the projection microscope, p. 304.

CHAPTER 12

Applications of X-Ray Microscopy in Biology and Medicine

12.1. Living specimens, p. 306. **12.1.1.** Rabbit, p. 306. **12.2.1.** Insects, p. 308. **12.1.3.** Ciné X-ray microscopy, p. 308. **12.1.4.** Radiation dosage to the specimen, p. 309. **12.2.** Thick sections, p. 310. **12.3.** Thin sections, p. 314. **12.4.** Botanical specimens, p. 317. **12.5.** Quantitative applications, p. 319.

CHAPTER 13

Inorganic Applications of X-Ray Microscopy

13.1. Metallurgy, p. 322. **13.1.1.** Iron and steel—segregations and inclusions, p. 322. **13.1.2.** Cast iron, p. 323. **13.1.3.** Iron ores and sinters, p. 324. **13.1.4.** Other ores and minerals, p. 325. **13.1.5.** Light metal alloys, p. 325. **13.1.6.** Diffusion, p. 328. **13.1.7.** Spot welding, p. 329. **13.1.8.** Castings, p. 329. **13.1.9.** Other metallurgical applications, p. 330. **13.2.** Industrial applications, p. 331. **13.2.1.** Paper, p. 331. **13.2.2.** Fibres and fabrics, p. 332. **13.2.3.** Geology, p. 333. **13.2.4.** Miscellaneous, p. 334.

CHAPTER 14

Microdiffraction

14.1. X-ray tubes, p. 336. **14.1.1.** Micro-focus X-ray tubes, p. 337. **14.1.2.** Reflexion types, p. 340. **14.2.** Cameras and methods, p. 342. **14.2.1.** Transmission, p. 344. **14.2.2.** Back reflexion, p. 344. **14.2.3.** Forward reflexion, p. 345. **14.2.4.** Divergent beam, p. 347. **14.2.5.** Selected area, p. 349. **14.2.6.** Powder cameras, p. 349. **14.2.7.** Moving specimen and film types, p. 350. **14.3.** Conclusion, p. 350.

CONTENTS

ix

CHAPTER 15

Some New Experimental Methods

15.1. The scanning system as an X-ray image intensifier, p. 351. **15.2.** Other forms of image intensifier, p. 354. **15.3.** Image conversion X-ray microscope, p. 356. **15.4.** Projection X-ray microscopy: focusing by back-scattered electrons, p. 359. **15.5.** Projection X-ray microscopy: focusing by forward-scattered electrons, p. 362. **15.6.** Contact microradiography with electron microscope enlargement, p. 365.

COMMENTS ADDED IN PROOF

page 367

APPENDIX

Absorption and Emission Data

A. 1. X-ray mass-absorption coefficients of certain elements and of dry air for the wavelength range 0.710–8.321 Å, p. 372. A. 2. X-ray mass absorption coefficients of certain elements for the wavelength range 8.34–44 Å, p. 375. A. 3. Principal emission lines of the *K*-series (wavelengths in Å units), p. 375. A. 4. Principal emission lines of the *L*-series (wavelengths in Å units), p. 377.
