| <i>Preface</i>                            | <i>page xi</i> |
| <b>PART ONE FLUID DYNAMICS AND WAVES</b>  | <b>1</b>       |
| <b>1 Elements of fluid dynamics</b>       | <b>3</b>       |
| 1.1 Flow kinematics                       | 3              |
| 1.2 Perfect fluid dynamics                | 8              |
| 1.3 Conservation laws and energy          | 11             |
| 1.4 Circulation and vorticity             | 12             |
| 1.5 Rotating frames of reference          | 16             |
| 1.6 Shallow-water system                  | 18             |
| 1.7 Notes on the literature               | 20             |
| <b>2 Linear waves</b>                     | <b>22</b>      |
| 2.1 Linear dynamics                       | 23             |
| 2.2 Notes on the literature               | 38             |
| 2.3 Exercises                             | 38             |
| <b>3 Geometric wave theory</b>            | <b>40</b>      |
| 3.1 Two-dimensional refraction            | 41             |
| 3.2 Caustics                              | 46             |
| 3.3 Notes on the literature               | 54             |
| 3.4 Exercises                             | 55             |
| <b>4 Dispersive waves and ray tracing</b> | <b>56</b>      |
| 4.1 Facets of group velocity              | 56             |
| 4.2 Examples of dispersive waves          | 67             |
| 4.3 Ray tracing for dispersive wavetrains | 73             |
| 4.4 Ray tracing in moving media           | 80             |
| 4.5 Wave activity conservation laws       | 88             |

|  |   |     |
|--|---|-----|
| 4.6  | Notes on the literature                               | 97  |
| 4.7  | Exercises   | 97  |
| <b>PART TWO WAVE–MEAN INTERACTION THEORY</b> |   | 99  |
| <b>5</b>                                     | <b>Zonally symmetric wave–mean interaction theory</b> | 101 |
| 5.1  | Basic assumptions                                     | 102 |
| <b>6</b>                                     | <b>Internal gravity waves</b>                         | 107 |
| 6.1  | Boussinesq system and stable stratification           | 107 |
| 6.2  | Linear Boussinesq dynamics                            | 110 |
| 6.3  | Zonal pseudomomentum of internal waves                | 116 |
| 6.4  | Mountain lee waves and drag force                     | 121 |
| 6.5  | Mean-flow response                                    | 129 |
| 6.6  | Wave dissipation                                      | 138 |
| 6.7  | Extension to variable stratification and density      | 142 |
| 6.8  | Notes on the literature                               | 146 |
| 6.9  | Exercises   | 146 |
| <b>7</b>                                     | <b>Shear flows</b>                                    | 148 |
| 7.1  | Linear Boussinesq dynamics with shear                 | 149 |
| 7.2  | Critical layers                                       | 155 |
| 7.3  | Joint evolution of waves and the mean shear flow      | 167 |
| 7.4  | Notes on the literature                               | 176 |
| 7.5  | Exercises   | 177 |
| <b>8</b>                                     | <b>Three-dimensional rotating flow</b>                | 178 |
| 8.1  | Rotating Boussinesq equations on an $f$ -plane        | 178 |
| 8.2  | Linear structure                                      | 179 |
| 8.3  | Mean-flow response and the vortical mode              | 188 |
| 8.4  | Rotating vertical slice model                         | 190 |
| 8.5  | Notes on the literature                               | 193 |
| 8.6  | Exercises   | 193 |
| <b>9</b>                                     | <b>Rossby waves and balanced dynamics</b>             | 194 |
| 9.1  | Quasi-geostrophic dynamics                            | 194 |
| 9.2  | Small amplitude wave–mean interactions                | 202 |
| 9.3  | Rossby waves and turbulence                           | 205 |
| 9.4  | Notes on the literature                               | 212 |
| 9.5  | Exercises   | 212 |

*Contents*

ix

|           |  |     |
|-----------|--|-----|
| <b>10</b> | <b>Lagrangian-mean theory</b>                                  | 214 |
|           | 10.1 Lagrangian and Eulerian averaging                         | 215 |
|           | 10.2 Elements of GLM theory                                    | 221 |
|           | 10.3 Wave activity conservation in GLM theory                  | 239 |
|           | 10.4 Coriolis forces in GLM theory                             | 248 |
|           | 10.5 Lagrangian-mean gas dynamics and radiation stress         | 255 |
|           | 10.6 Notes on the literature                                   | 258 |
| <br>      |  |     |
| <b>11</b> | <b>Zonally symmetric GLM theory</b>                            | 259 |
|           | 11.1 GLM theory for the Boussinesq equations                   | 259 |
|           | 11.2 Rotating Boussinesq equations on an $f$ -plane            | 264 |
|           | 11.3 Langmuir circulations and Craik–Leibovich instability     | 267 |
|           | 11.4 Notes on the literature                                   | 273 |
| <br>      |  |     |
|           | <b>PART THREE WAVES AND VORTICES</b>                           | 275 |
| <b>12</b> | <b>A framework for local interactions</b>                      | 277 |
|           | 12.1 A geometric singular perturbation                         | 278 |
|           | 12.2 Examples of mean pressure effects                         | 280 |
|           | 12.3 Vortical mean-flow response                               | 290 |
|           | 12.4 Impulse and pseudomomentum conservation                   | 297 |
|           | 12.5 Notes on the literature                                   | 305 |
| <b>13</b> | <b>Wave-driven vortex dynamics on beaches</b>                  | 306 |
|           | 13.1 Wave-driven longshore currents                            | 306 |
|           | 13.2 Classic theory based on simple geometry                   | 308 |
|           | 13.3 Theory for inhomogeneous wavetrains                       | 315 |
|           | 13.4 Vorticity generation by wave breaking and shock formation | 316 |
|           | 13.5 Vortex dynamics on sloping beaches                        | 321 |
|           | 13.6 Barred beaches and current dislocation                    | 329 |
|           | 13.7 Notes on the literature                                   | 333 |
| <b>14</b> | <b>Wave refraction by vortices</b>                             | 335 |
|           | 14.1 Anatomy of wave refraction                                | 336 |
|           | 14.2 Remote recoil   | 339 |
|           | 14.3 Wave capture of internal gravity waves                    | 342 |
|           | 14.4 Wave–vortex duality and dissipation                       | 351 |
|           | 14.5 Notes on the literature                                   | 352 |
|           | <i>References</i>  | 354 |
