

## Index

---

- adjacency matrix, 13
- amenable graph, 103, 104
- balayage, 177, 178
- ballistic random walk, 105
- binary tree, with weights, 74
- boundary, 2
- bounds, on diagonal, 109
- cadlag, 190
- caloric function, 171
- capacitary measure, 172
- capacity, 51, 174
- Carne–Varopoulos bound, 113
- Cayley graph, 4
- chaining argument, 129
- Chapman–Kolmogorov equation, 133, 194
- Cheeger constant, 91
- Cheeger’s inequality, 101
- circuit reduction, 61
- co-area formula, 83, 92
- collapse of subset in a graph, 5
- commute time identity, 71
  - for sets, 175
- conductance, 2, 38
- continuous time simple random walk, 132
- current (in a circuit), 38
- cutting (an edge), 50
- cycle, 1
- Dirichlet form, 18, 137
  - trace, 62, 66
- Dirichlet problem, 40
- discrete Gauss–Green, 17
  - $(E_\beta)$ , 124
- effective conductance, 45
- effective constant, 90
- effective resistance, finite network, 42
- electrical equivalence of networks, 63
- electrical network, 38
  - circuit reduction, 61
- energy
  - dissipation (of a current), 48
  - of flow, 48
  - of function, 18
- escape measure, 172
- Euclidean lattice, 4
- explosion time, 137
- exterior boundary, 2
- extremal length, 51
- feasible function, 45
- Feller’s problem, 59
- filtration, 183
- 5B theorem, 211
- flow, 38
  - on a graph, 47
- flux out of a set, 39
- Foster’s criterion, 28
- function
  - cadlag, 190
  - harmonic, 26
  - right continuous with left limits, 190
  - subharmonic, 26
  - superharmonic, 26
- Gaussian distribution, 9
- graph
  - balls, 2

- bounded geometry, 2
- connected, 1, 2
- lazy, 5
- locally finite, 2
- metric, 1
- natural weights, 3
- strongly recurrent, 149
- type problem, 8
- weighted, 2
- graph products, 6
- Green's function, 22, 67, 121
- group, 4
  
- Hadamard's transmutation formula, 114
- harmonic, 26
- Harnack inequality
  - elliptic, 29
  - local, 29
- heat equation, discrete time, 15
- heat kernel, 11
  - discrete time, 11
  - global upper bounds, 109
  - for killed process, 21
  - on-diagonal upper bounds, 109
- heat kernel bounds
  - Gaussian, 117, 160
  - sub-Gaussian, 117
- Hewitt–Savage 01 law, 35
- hitting measure, 172
- hitting times, 7
- $HK(\alpha, \beta)$ , 116, 146, 147, 154
- $HKC(\alpha, \beta)$ , 144, 146, 147
  
- inequality
  - Cheeger's, 101
  - isoperimetric, 80
  - Nash, 85
  - Poincaré, 94, 96, 160, 167
- infinitesimal generator, 135
- isoperimetric inequality, 80
  - for  $\mathbb{Z}^d$ , 93
  - relative, 91, 92
  - strong, 80
- iterated function scheme, 75
  
- join of two graphs, 6
  
- Kesten's problem, 8
- killed process, 21
- Kirchhoff's laws, 39
- Kolmogorov extension theorem, 194
  
- lamplighter graph, 103
- Laplacian, 12
  - combinatorial, 13
  - probabilistic, 12
- last exit decomposition, 172
- law of the iterated logarithm, 120
- lazy random walk, 37, 100, 138, 202
- $LHK(\alpha, \beta)$ , 116, 131
- $LHKC(\alpha, \beta)$ , 144
- Liouville property, 27
- local time, 22
- loop, 1
  
- Markov chain, 6
- Markov process associated with Dirichlet form, 137
- Markov property
  - of quadratic form, 20, 62, 203
  - simple, discrete time, 187
  - strong, 23, 186
    - continuous time, 197
    - discrete time, 188
- martingale, 183
  - convergence theorem, 27
  - optional sampling theorem, 184
- maximum principle, 26
- minimum principle, 27
- modulus of a family of curves, 51
  
- near-diagonal lower bound, 128, 146, 162
  
- Ohm's law, 38
- optional sampling theorem, 184
- oscillation inequality, 30
  
- path, 1
  - self-avoiding, 1
- permutable set, 35
- Poincaré inequality, 94, 96, 160, 167
  - expansion factor, 95
  - strong, 95, 218
  - weak, 94
  - weighted, 161, 213, 214
  - for  $\mathbb{Z}^d$ , 95
- Poisson distribution, 143
- Poisson process, 132, 191
- polynomial volume growth, 114
- potential (in electrical network), 38
- potential kernel density, 22
- potential operator, 24
- products (of graphs), 6

- quasi-isometry, 10
- random walk
  - continuous time, 192
  - discrete time, 6
- recurrence
  - Foster's criterion, 28
- recurrent graph, 8
  - strong Liouville property, 27
- reduite, 177
- resistors
  - in parallel, 65
  - in series, 64
  - $Y$ - $\nabla$  transform, 65
- reversible (Markov chain), 7
- Riesz representation theorem, 176
- rough isometry, 10
- semigroup, 114, 135
  - continuous time, 192
- shift operators
  - continuous time, 192
  - discrete time, 186
- shorting (an edge), 50
- Sierpinski gasket, 75
- Sierpinski gasket graph, 76, 150, 155
- $\sigma$ -field
  - exchangeable, 36
  - invariant, 32
  - tail, 33, 199
- spectral gap, 100
- spectral radius, 101
- stability under rough isometries, 11, 36, 69, 82, 96, 103, 170, 213
- stable
  - under perturbations of weights, 9
- stochastically complete, 138
- stopping time, 117, 133, 183, 196
  - in continuous time, 196
- strong Liouville property, 27, 30
  - for  $\mathbb{R}^d$ , 31
- subgraph, 5
- subharmonic, 26
- submartingale, 183
- superharmonic, 26
- supermartingale, 27, 183
  - convergence, 184
- Thomson's principle, 53
- time derivative of  $p_n$ , 122
- total variation norm, 197
- trace (of Dirichlet form), 62, 66
- transient graph, 8
- transition density, 11
- transition matrix, 6
- tree
  - binary, 4
  - with weights, 74
  - spherically symmetric, 74
- $UHK(\alpha, \beta)$ , 116, 124, 127, 131, 146
- $UHKC(\alpha, \beta)$ , 144, 146
- uniformly integrable process, 184
- unpredictable paths, 60
- $(V_\alpha)$ , 116
- variational problem, 45
  - for functions, 45
- volume doubling, 169, 206
- volume growth, 116
  - exponential, 81, 103
  - polynomial, 114
- wave equation, 114
- weight stable property, 9
- weighted graph, 3
- weights
  - (on a graph), 2
  - bounded, 3
  - controlled, 3
  - equivalent, 9
  - natural, 3
- Wiener's test, 181
- Wye-Delta transform, 65
- $Y$ - $\nabla$  transform, 65
- 02 law, 200
