AUTHOR'S PREFACE

page ix

CHAPTER I

The Condensation and Growth of Drops

1.1. Condensation on nuclei, p. 1. **1.2.** The stability of charged drops, p. 3. **1.3.** Growth from charged nuclei, p. 6. **1.4.** Condensation on uncharged nuclei, p. 7. **1.5.** Condensation in mixed vapours, p. 9. **1.6.** The practical onset of background condensation: contamination, p. 10. **1.7.** Re-evaporation nuclei, p. 13. **1.8.** Rate of growth of drops, p. 14.

CHAPTER II

Ionization in Cloud Tracks

2.1. Introduction, p. 18. **2.2.** The energy transfer in ionizing collisions, p. 19. **2.3.** Breadth of the column of ionization, p. 21. **2.4.** Measurements of track ionization, p. 22. **2.5.** Average ionization, p. 23. **2.6.** Polarization effects at high momenta, p. 27. **2.7.** Extension of the Fermi treatment, p. 29.

CHAPTER III

The Production and Maintenance of Supersaturation

3.1. Elementary features of a volume-defined expansion, p. 30. **3.2.** Speed of expansion, p. 32. **3.3.** The critical supersaturation limits as a function of temperature, p. 33. **3.4.** Volume-defined and pressure-defined chambers, p. 34. **3.5.** Expansion characteristics in volume-defined and pressure-defined chambers, p. 37. **3.6.** Use of a porous diaphragm, p. 38. **3.7.** The persistence of supersaturation, p. 39. **3.8.** Continuously sensitive chambers, p. 47.

CHAPTER IV

Operation and Photography

(1) Basic principles of operation; (2) Optics and photography of cloud droplets

4.1. Construction and materials, p. 51. **4.2.** Cleanness against background condensation, p. 52. **4.3.** Stability of temperature, p. 55. **4.4.** Automatic mechanisms, p. 56. **4.5.** Nature of object, p. 56. **4.6.** Light scattered from droplets, p. 57. **4.7.** The photographic image of a single drop, p. 59. **4.8.** Depth of focus, p. 60.

CHAPTER V

Counter Control

5.1. The need for counter-control, p. 65. **5.2.** Technical problems of counter-control, p. 67. **5.3.** The resolving time of a cloud chamber, p. 69. **5.4.** Application of control: operating rate, p. 71. **5.5.** The counter-controlled chamber as a sampling device, p. 74. **5.6.** Counter-control in work at high altitudes, p. 74.

CONTENTS

CHAPTER VI

The Technique of Precision Measurements

(1) Momentum; (2) Angular measurements

6.1. Introduction, p. 77. **6.2.** The scattering of cloud tracks, p. 78. **6.3.** Treatment of track scattering by Williams, p. 79. **6.4.** Modified treatment by Bethe, p. 81. **6.5.** The distortion of track images, p. 83. **6.6.** Gas motion in the cloud chamber, p. 84. **6.7.** Distortion of the optical system, p. 88. **6.8.** Treatment of chamber distortions, p. 89. **6.9.** Check of calibration in the presence of magnetic field, p. 92. **6.10.** Maximum detectable momentum, p. 93. **6.11.** The relative importance of track scattering and chamber distortions, p. 94. **6.12.** Curvature measurements on the photographic image, p. 96. **6.13.** Co-ordinate plot of track image, p. 98. **6.14.** Optical compensation of track curvature, p. 101. **6.15.** General features of angular measurement, p. 105. **6.16.** Photographs at right angles, p. 105. **6.17.** Deflexion of cosmic-ray tracks in plates, p. 109. **6.18.** The technique of deflexion measurements, p. 111. **6.19.** Appendix: The production of magnetic fields, p. 113.

CHAPTER VII

Interpretation of Cloud-Chamber Photographs

7.1. Introduction, p. 116. **7.2.** What can be observed in cloud-chamber photographs, p. 116. **7.3.** Photographic quality demanded for interpretation, p. 118. **7.4.** The momentum-ionization compromise, p. 120. **7.5.** Lines of solution of the momentum-ionization compromise, p. 121. **7.6.** Characteristic features of particle behaviour used for purposes of interpretation, p. 122.
