## INDEX

- Academia del Cimento, 63  
 Academy of Sciences, suppression of, by the Convention, 252  
 ‘Acini,’ the, of Malpighi, 111, 112  
 Albinus, Frederick Bernard, Professor of Anatomy at Leyden, 203  
 Alimentary canal, 47, 51  
 ‘Animism,’ Stahl the founder of, 171  
*Archaeus*, the, 124, 126, 130, 134, 137, 141, 166, 167  
 Artery-like vein, 11, 22, 28, 32, 38, 39, 43, 58, 94  
 Aselli, Gaspar, the discoverer of the lacteals, 48–51, 129, 137; ‘pancreas of Aselli,’ 49
- Bacon, Francis, *Novum Organon* of, 129  
 Bassi, Laura, holds the Chair of Mathematics at Bologna, 210  
 Beccher, Johann Joachim, the *Physica subterranea* of, 166; *Specimen Beccherianum* of Sylvius, 166  
 Bell, Charles, on sensory and motor fibres, 296  
 Bellini, Laurentio, the *Structura renum* of, 109; Professor of Anatomy at Pisa, *ib.*; physician to Cosimo III, 109  
 Bentley, Richard, establishes an ‘elaboratory’ at Trinity College, Cambridge, 229  
 Berengarius, Jacobus, dissection of corpses by, 4; driven from Bologna retires to Ferrara, 5  
 Birds, René de Reaumur on the digestion of, 207, 208  
 Black, Joseph, *Dissertatio de humore acido a cibo orto* of, 230; Professor of Chemistry at Glasgow and Edinburgh, *ib.*; experiments on magnesia alba, etc., *ib.*; the *Treatise of Chemistry* of, 231–234  
 Blas, term used by van Helmont, 130, 134, 141  
 Boerhaave, Hermann, birth, 198; early years at Leyden; Doctor of Philosophy, 198; of Medicine; appointed to the Chair of Medicine at Leyden, 199; death, 200; the *Institutiones medicae* of, 201; the *Elements of Chemistry* of, 225  
 Borelli, Giovanni Alphonso, birth, 61; studies mathematics at Rome; accepts the Chair of Mathematics at Messina; goes to Florence to hear Galileo; returns to Messina; publishes his first work, an account of the Pestilence in Sicily, *ib.*; accepts the Chair of Mathematics at Pisa; a self-taught man, 62; friendship with Malpighi, *ib.*; becomes estranged from him; publication of his *Euclides restitutus*, 63; *De vi percussionis*; at work at the *De motu animalium*; publishes his treatise on ‘The natural movements depending on gravity,’ *ib.*; leaves Pisa and returns to Messina; goes into exile at Rome, 64; investigates an eruption of Etna, *ib.*; Christina, daughter of Gustavus Adolphus, takes him under her protection, 64, 65; dedicates his work on animal motion to her, 64; robbed by his servant; takes up his abode among the Society of the Scholae Piae of San Pantaleone; death, *ib.*; publication of *De motu animalium*, 65; account of the book, 65–67; on muscular contraction, 67–73; on the circulation, 74–78; on the structure of glands, 79–80; on the secretion of urine, *ib.*; on the physiology of nerves, 81; makes the friendship of Malpighi at Pisa, 87; his character contrasted with that of Malpighi, *ib.*, 88; contrasted with Franc. Sylvius, 158, 159; on gastric digestion, 163, 164; on respiration, 174–177; on muscular contraction and nervous action, 279–282  
 Bossuet, J. B., endeavours to convert Stensen to the Catholic religion, 105  
 Boyle, Hon. Robert, pneumatic machine of, 176, 177  
 Brunner, J. C. von, birth; graduates at Strassburg; occupies the Chair of Medicine in Heidelberg; Court Physician at Düsseldorf; death; publishes *Experimenta nova circa pancreas*; and *Dissertatio de glandulis duodeni*, 161; Brunner’s glands, 162; experiment on the removal of the spleen and pancreas, 162, 163  
 Caesalpinus, Andreas, birth; Professor of Medicine at Pisa; Professor at the Sapienza University; Physician to Pope Clement VIII, 31; passion

## INDEX

- for theology; opposes Galen, 31; the *Questiones peripateticæ* and *Questiones Medicæ* of, 31–34; credit of Harvey's work claimed for, 52
- Calcar, J. S., illustrates the works of Vesalius, 10
- Cannanus, J. B., observes the valves of the veins, 35
- Capillaries, 97, 99
- Carminati, on the acidity of gastric juice, 220
- Carpi, v. Berengarius
- Castello, Benedetto, Borelli's teacher at Rome, 61
- Castello, P., death of, 89
- Cavendish, experiments on factitious air, 248
- Charles V, the father of Vesalius apothecary to, 5; Vesalius dedicates his 'Structure of the human body' to, 10; appoints Vesalius Court Physician, 15
- Chemical Laboratory, the first University, 146
- Christina, daughter of Gustavus Adolphus, takes Borelli under her protection at Rome, 64, 65
- Church, The, and Science, 3–5, 16
- Cimento, Academia del, 63
- Circulation of the blood, 57–59, 74–77, 147, 222–225
- Columbus, Matheus Realdus, deputy of Vesalius at Padua, 14; appointed Professor of Anatomy at the University of Pisa, 25; birth; studies at Venice and Padua; acknowledgements to Lonigo, *ib.*; estrangement with Vesalius, 26; nominated to the Chair of Surgery in Padua; nomination unconfirmed; withdraws to Pisa, *ib.*; teaches anatomy there; called to the Chair of Anatomy in the University of Rome, 27; death; the *De Re Anatomica* of; an imitation of Vesalius, *ib.*; his teaching of the pulmonary circulation identical with that of Servetus, 30; credit of Harvey's work claimed for, 52
- Consentinus, T. C., story of, concerning Sarpi and Harvey, 53
- Convention, suppression of the Academy of Sciences by the, 252
- '*Corus anatomicus*,' the, at Bologna, 86
- Cosimo III, Stensen made Court Physician to, 105; Laurentio Bellini physician to, 109
- Costaeus, Joh., on the mesaraic veins, 48
- Crabbe, Isabella, maiden name of the mother of Vesalius, 5
- Crawford, Adair, publishes a 'Theory of Heat,' 246
- Curio, a learned doctor at Padua, copy of the theological work of Servetus sent to, 23, 30
- Dephlogisticated air, 238
- Descartes, René, birth and death, 56; Theory of the Universe; *Discours de la méthode*; *De homine*, *ib.*; Descartes the Herbert Spencer of the age, 57; not convinced by Harvey's arguments, *ib.*; on the circulation, 57–59; N. Stensen on the position of, as a physiologist, 60; the 'rational soul' of, 258; his exposition of the working of the body as an earthly machine, 259–265
- Digestion, 163, 164, 170, 205, 211, 212, 218–221
- Digestions, the six, of van Helmont, 135–140
- Drebbel, Cornelius, the maker of an improved microscope, 85
- Dubois, François, v. Sylvius, Franciscus
- Du Bois, J., v. Sylvius, Jacobus
- Duct, Stensen's discovery of the parotid, 105, 107, 108
- Ductus aquosi* and *serosi*, 50
- Edwards, W. F., 'the influence of physical agents on life,' 251
- 'Elements,' the two, of van Helmont, 131; the three, of Valentine, 123, 126
- Embryology, Malpighi the founder of the science of, 92
- Ent, *Apologia* of, 55
- Erasistratus, 47, 83
- Etna, Mount, Borelli's investigation of an eruption of, 63
- Eustachian tube and valve, 48
- Fabricius, Hieronymus, birth, 35; studies under Falloppius at Padua; succeeds him; death of, *ib.*; the *De venarum ostioliis* of, *ib.*, 36; the *De respiratione et ejus instrumentis* of, 37, 38; on the formation of the foetus, 39
- Falloppius, Gabr., anatomical observations of, 17, 25; Vesalius's 'Examen' of, 17; succeeds Vesalius at Padua; birth; Falloppian canal and Falloppian tubes, 25
- Ferdinand II, Grand Duke of Tuscany, offers the Chair of Theoretical Medicine at Pisa to Malpighi, 87; Stensen made Court Physician to, 105

- Fermentation**, 148–150, 170, 173, 217, 219
- Ferrein**, Ant., the pyramids of, 115
- Fixed air**, 244
- Fontana**, invention of the compound microscope attributed to, 85
- Fracastorius**, on the motion of the heart, 42
- Fugger family**, mines in the Tyrol held by the, 122
- Galen**, structure and use of the parts of the body of man, 3; main outlines of the physiology of, 12
- Galileo Galilei**, leaves Pisa and becomes Professor at Padua, 55; effects of the teaching of, on the problems of physiology, 61; death of, 61; invention of the compound microscope attributed to, 85
- Gas**, term used by van Helmont, 130, 131, 133, 141
- Glands and tissues**, 100–119
- Glands**, Borelli on the structure of, 79–80; discovery of new, by Peyer, 160
- Glauber's salt**, 146
- Glisson**, Francis, sketch of the morphological constitution of the animal body, 83, 84; on the liver, 109, 111; birth and education; Fellow of Gonville and Caius College; appointed Regius Professor of Physic; Fellow of the Royal College of Physicians, 284; at work in London during the Plague, 285; his *Tractatus de natura substantiae energetica*, *ib.*, 286; on the liver, 286; the stomach, 286
- Graaf**, Regnier de, birth: studies under Sylvius at Leyden; practises at Delft; dies there, 152; on pancreatic juice, 152–155
- Grew**, Nehemiah, 'the Anatomy of Vegetables begun,' 91
- Günterius**, Joh., Vesalius a pupil of, 6
- Günther**, Joh., *v.* Günterius, Joh.
- Hales**, Stephen, birth, education, and death; makes the acquaintance of Horace Walpole, 228; 'Statistical Essays' of, 229
- Haller**, Albrecht von, publication of Vol. I of his *Elementa Physiologiae*; birth and education, 202; accepts the Chair of Anatomy, Botany, and Medicine at Göttingen, 203; retires to Bern; completes his *Elementa*; death, 204; his exposition of digestion, 205, 206; bile, 206; on the pancreas, 206; on respiration, 225–229; on nervous action, 290–295; on the 'seat of the soul,' 295–296
- Harvey**, William, birth; at Cambridge; leaves England for Padua; degree at Padua; return to England; in London; Physician to St Bartholomew's Hospital; Physician to King Charles I; in charge of the Princes at the battle of Edgehill; retires into private life; publishes the *De generatione animalium*; death, 41; on the circulation of the blood, 42–47, 51–53; on the lacteal veins discovered by Aselli, 51; the credit of his work claimed for others, 52; his method strictly physiological, 54
- Hassenfratz**, on the combination of oxygen with the carbon and hydrogen of the blood, 250
- Heat**, 246
- Helmont**, J. B. van, birth; studies at Louvain, 127; refuses the M.A. degree, 127; takes his Doctorship of Medicine; travels; his return and marriage; life and death at Vilvorde; the *Ortus Medicinae* of; *De magnetica vulnerum curatione*, 128; influence of Paracelsus on him, 129; comparison of the two intellects, 130; Gas and Blas, terms used by him, 130–134; the six digestions of, 135–140; the sensitive and motive soul of, 258
- Herbst**, J., *v.* Oporinus, J.
- Hippocrates**, 4, 227
- Histology**, 93
- Hofmann**, J. M., claims the discovery of the duct of the pancreas, 103
- Hohenheim**, Theophrastus von, *v.* Paracelsus
- Hooke**, Robert, new ideas started by, under the use of the microscope, 85; birth and death of; curator of experiments to the Royal Society; the *Micrographia* of; experiment on artificial respiration, 178, 179
- Horn**, van, on the discovery of the thoracic duct, 49
- Hunter**, John, on digestion, 218–221; accuses Reaumur of 'anatomical ignorance'; criticizes Spallanzani; the latter's reply, 218
- Hydrocarbonous fluid**, 250, 251
- Hydrogen**, 248, 249
- Ingrassias**, John Philipp, the stapes first observed and described by; succeeds Vesalius as physician to Philip II, 30

## INDEX

- Innocent XII appoints Malpighi his physician, 118  
Irritability, 286, 289
- Janssen, Hans and Zacharias, the supposed inventors of the microscope, 85  
Jolive, takes degree at Cambridge; on lymphatics, 50
- Kidneys, functions of the, 101
- Lacteals, 47–50, 129, 137, 156  
Lagrange, on respiration, 250  
Laplace, memoir on heat, 246  
Laudanum, use of, said to be due to Paracelsus, 126  
Lavoisier, Ant. Laurent, birth and education; admitted to the Academy of Sciences; publication of his work 'On the nature of the principle which combines with metals during their calcination,' 242; the discoverer of oxygen; on 'General considerations concerning the nature of acids,' 243; on animal respiration, 243–245; publishes in conjunction with Laplace, memoir on heat, 246; publishes in conjunction with Sequin 'The transpiration of animals,' 249; his theory of a hydrocarbonous secretion overthrown by Spallanzani, 251; arrested and executed by the Convention, 252  
Leeuwenhoek, Anton van, new ideas started by, with the aid of the microscope, 85; observes the capillaries, 97; description of red blood corpuscles by, 99  
Liver, functions of the, 101  
Lower, Richard, experiments on transfusion, 179; practises in London; publishes the *Tractatus de corde*, 180; the instructor of Thomas Willis, 267, 268  
Loyola, Ignatius, contemporary with Vesalius, 8  
Lung, discovery of the structure of, by Malpighi, 89, 94  
Luzzi, R. de', v. Mundinus, R.  
Lymphatics, 48, 49, 50, 104, 156
- Magnus, Gustav, on respiration, 251, 252  
Malpighi, Marcello, new ideas started by, with the aid of the microscope; birth; student at Bologna; disputes with the Sbaraglia family, 85; joins the *Corus anatomicus* at Bologna; becomes Doctor in Medicine and Philosophy; in disfavour with the Obscurantists; marries the sister of Massari; made Professor of Medicine, 86; accepts the Chair of Theoretical Medicine at Pisa; makes the friendship of Borelli there; his character contrasted with that of Borelli, 87, 88; his manuscript of a Dialogue between a Galenist and a surgeon accidentally burnt, 88; resigns his Chair at Pisa and returns to Bologna as Professor of Medicine; discovers the structure of the lung; accepts the Chair of Medicine at Messina, 89; makes friends with Stensen; accepts post again at Bologna, 90; invited to a philosophic correspondence with the Royal Society of London; his works published by the Society; his book on the anatomy of plants, 91; the founder of the science of embryology; devotes himself to the study of the silkworm, 92; the first histologist, 93; his work 'On the Lungs,' 94–97; further discovery touching the blood, 98; work of, on the tongue and external organ of sense, 99; on the anatomy of the brain, 100; glands, 100–103; on the liver, 111–115; the kidney, 115, 116; the spleen, 116, 117; treatises written at Bologna, 117; becomes physician to Innocent XII; death, 118; autobiography; Borelli's criticism of his views on respiration, 175; on the histology of the nervous system, 266  
Malpighian layer, 99  
Maria Theresa, Empress, offers the Chair of Natural History at Pavia to Lazzaro Spallanzani, 210  
Massari, Bartolommeo, forms a club called the *Corus anatomicus* at Bologna; sudden death of, 86  
Mayow, John, at Oxford; publications of; admitted Fellow of the Royal Society; death, 183; on respiration, 184, 190; tract on sal-nitrum, 184; on combustion, 187, 188; identification of burning and breathing, 188–196; on muscular contraction, 284  
Medici, Cosimo de', 15; appoints Columbus Professor of Anatomy at Pisa, 25  
Medulla cerebri, 291  
Mesaraic veins, 48  
Microscope, 69, 83, 85, 93, 95, 96  
Motor fibres, 296  
Mundinus, R., teaches at Bologna; the *Anatomia* of, 4  
Muscular contraction, 67–75

Cambridge University Press

## INDEX

305

- Nerves** physiology of, on Borelli's views, 80
- Nervous system**, Vesalius on the, 253–255; Malpighi on the histology of, 266
- Nitrogen**, discovery of, 234
- Oporinus, J.**, printer of the *Fabrica humani corporis* of Vesalius, 3
- Oxygen**, prepared by Priestley, 237; discovered by Lavoisier, 242, 243
- Pancreas**, 49, 206; removal of the, 161, 162
- Pancreas**, discovery of the duct of the, 103
- Pancreatic juice**, 152–156
- Paracelsus**, why so called; enters the University of Basel; becomes the pupil of Bishop Trithemius at Würzburg; spends some time in the mines in the Tyrol, 122; learns the doctrines of Valentine from Bishop Trithemius, 124; settles at Basel; driven hence; dies at Salzburg, 125; use of laudanum said to be due to him, 126; his doctrines taken up by van Helmont, 127
- Parotid duct**, Stensen's discovery of the, 104, 105, 107
- Pecquet, Jean**, *Experimenta nova anatomica* of, 49
- Peyer, Jean Conrad**, the *Exercitatio anatomica medica de glandulis intestinorum* of, 160
- Philip II**, Vesalius Court Physician to, 16
- Phlogiston**, 166, 187, 222, 224, 231, 236, 238–242
- Plants**, anatomy of, Malpighi's work on the, 91
- Priestley, Joseph**, oxygen prepared by, 238; on respiration, 235–241
- Pulmonary artery**, v. Artery-like vein
- Putrefaction**, 213
- Reaumur, René Antoine Ferchault de**, birth, etc.; his thermometer; his work on insects, 207; on the digestion of birds, 208; accused of 'anatomical ignorance' by Hunter, 218
- Respiration**, 172, 177, 181, 225–227, 235–245
- Rhazes**, the ninth book of, translated by Vesalius, 7
- Robinson, Nicolas**, on the spleen, 293
- Royal Society of London**, founding of the, 172; Malpighi invited by the Society to a philosophic conference; the Society publishes his works, 91
- Rudbeck, Olaus**, *Nova exercitatio anatomica* of, 50
- Ruffo, Visconte**, the friend and patron of Malpighi, 91
- Ruini, Carlo**, on the anatomy of the horse, 53
- Ruysch**, on the distribution of the renal blood vessels, 115
- Sagrino**, 95
- Salts**, study of, 146
- Sanctorius, S.**, birth; studies at Padua; practises at Venice; Professor of Theoretical Medicine at Padua; dies in Venice; publication of his *Medical Statics*, 144; account of the book, 145
- Sarpi, Petrus Paulus**, studies anatomy under Fabricius; the story of his arrival at conclusions similar to those of Harvey; said by Ent to have made use of Harvey's book as his own, 53
- Sbaraglia family** disputes with the Malpighi family, 85
- Sensory and motor fibres**, 296
- Septalius, Senator**, 49
- Servetus, Michael**, birth; studies at Paris under Günther and Sylvius; physician to Abp of Vienna; theological works of; he and his works burnt by order of Calvin, 21; credit of Harvey's work claimed for, 53
- Silkworm**, 92
- Soul**, the, 141–143, 167–171, 255, 257, 269, 293–295
- Spallanzani, Lazaro**, birth and education; studies under Laura Bassi; Professor at Reggio and Modena; offered Professorships at Pavia and Padua which he refuses; death; his works on reproduction, etc., 210; contributions to the physiology of digestion, 211–213; on fermentation, 213; on gastric juice, 215, 216; criticism of, by Hunter, 218; on the respiration of animals, 251
- Spirits**, 12, 13, 21, 46, 52, 54, 59, 134, 138, 141, 194, 258, 271–275, 282, 283
- Spleen**, removal of the, 162
- Stahl, G. E.**, Court Physician at Weimar; Professor of Medicine at Halle; Physician to King of Prussia, 166; the 'sensitive soul' of, 167–171; his treatise *De mixti et vivi corporis vera diversitate*, 168; what his teaching briefly was, 171; on the circulation of the blood, 222–225

Cambridge University Press

## INDEX

- Stapes, the, 30
- Stelluti, Francisco, the first to use the microscope at Rome, 85
- Stensen, Nicolas, on the position of Descartes as a physiologist, 60; the *De musculis observationum specimen*, and *Elementorum myologiae specimen* of, 69; makes the friendship of Malpighi, 90; discovery of the parotid duct, 104; the *Observationes Anatomicae* of; attracts attention of Bossuet; discourse on the anatomy of the brain; made Court Physician to Ferdinand II; and Cosimo III; his work called *De solido intra solidum*, 105; forsakes his old studies and devotes himself to religion; receives the titular honour of Bishop of Titiopoliis; teaches anatomy at Copenhagen, 106; describes his discovery of the parotid duct, 107–108; on muscle, 281; on the value of science in practical matters, 282
- Stevens, of Edinburgh, experiments on digestion, 217
- Stone in the bladder, 230
- Swammerdam, Joh., new ideas started by, with the aid of the microscope, 85; the *Biblia Naturae* of, 98
- Sylvius, Franciscus, studies at Sedan and Basel; Professor of Medicine at Leyden; has a 'Laboratorium' built for him there; devotes himself to the study of salts, 146; writes on the circulation; a follower of Harvey; Harveian doctrines established in Holland through the advocacy of, 147; what Stensen says of Sylvius, 148; his idea of fermentation, 149; of bile, 156; on the secretion of urine, 157; his view of the spleen, 158; Sylvius contrasted with Borelli, 159, 160; *Specimen Beccherianum* of, 166; on respiration, 184
- Sylvius, Jacobus, teaches anatomy at Paris; succeeds Vidus Vidius at the College of France; 'fissure' of; a strict Galenist; influence of; his teaching overturned by Vesalius, 5
- Tadinus, Alexander, 49
- Thoracic duct, 49, 50
- Tiepolo, Venetian ambassador, 17, 18
- Torrucellian vacuum, 176
- Transfusion, experiments on, 179
- Trithemius, Bishop, the teacher of Paracelsus, 122, 124
- Urine, Borelli on the secretion of, 80; F. Sylvius on the secretion of, 157
- Valentine, Basil, the *Currus triumphantis antimonii* of; the three 'elements' of, 123, 126
- Vasa aquosa* and *serosa*, 50
- Vein-like artery, 12, 13, 22, 28, 32, 38, 43, 58, 94, 173
- Veins, valves of the, observed by Cannanus, 35
- Vena cava, 43, 44, 46
- Vena porta, 47
- Vesalius, Andreas, *Fabrica humani corporis* of, published, 3; birth, 5; studies at Louvain; at Paris under Sylvius; a pupil of Guinterius, 6; back at Louvain, 7; translates the ninth book of Rhazes and goes at Venice, 7; honours and teaching to Padua, 8, 9; publication of 'Structure of the human body'; Anatomical tables; editions of Guinterius and Galen; treatise on blood letting, 10; leaves Padua, 14; reviled by Sylvius and others during his absence; return to Padua, 15; discouraged by opposition; burns all his MSS.; accepts the post of Court Physician to Charles V, 16; afterwards to Philip II; marriage, *ib.*; 'Examen' of the anatomical observations of Fallopius, 17; decides on a pilgrimage to Jerusalem; death at Zante, 18; his influence on science; the forerunner of Harvey, 19; his work a necessary preparation for Harvey's labours, 55; views of, on the nervous system, 253–255; on vivisection, 255, 257; on the brain, 255, 257; the chief soul, 257
- Vidius, Vidus, at the College of France, 5
- Vieussens, on fermentation, 149–150
- Vis insita of Haller, 289, 291
- Vital principle, 218
- Walpole, Horace, 228
- Wedel, on the archæus, 166
- Wesalius, *v.* Vesalius
- Wharton, Thomas, on glands, 103
- Willis, Thomas, birth and education; made Sedleian Professor at Oxford, 267; on the structure and functions of the brain, 267–274; criticized by Mayow and Stensen, 277; on muscular contraction, 283
- Wirsung, J. G., discovery of the duct of the pancreas by; tragic death of, 103
- Witing, original name of the family of Vesalius, 5
