

Contents

<i>Preface</i>	<i>page</i>	vii
1	First order differential equations	1
1.1	General remarks about differential equations	1
1.1.1	Terminology	1
1.1.2	Approaches to problems involving differential equations	2
1.2	Exactly solvable first order ODEs	5
1.2.1	Terminology	5
1.2.2	Solution by integration	5
1.2.3	Separable equations	6
1.2.4	Linear first order differential equations	7
1.2.5	Exact equations	8
1.2.6	Changing variables	10
1.3	Existence and uniqueness of solutions	14
1.4	Geometric methods: direction fields	18
1.5	Remarks on numerical methods	23
2	Systems and higher order equations	27
2.1	General remarks	27
2.2	Existence and uniqueness of solutions for systems	31
2.3	Linear systems	35
2.3.1	General remarks	35
2.3.2	Linear algebra revisited	37
2.4	Homogeneous linear systems	40
2.4.1	The vector space of solutions	40
2.4.2	The eigenvector method	43

vi	<i>Contents</i>	
	2.5 Inhomogeneous linear systems	47
3	Second order equations and oscillations	51
	3.1 Second order differential equations	52
	3.1.1 Linear, homogeneous ODEs with constant coefficients	52
	3.1.2 Inhomogeneous linear equations	53
	3.1.3 Euler equations	55
	3.1.4 Reduction of order	58
	3.2 The oscillating spring	60
	3.2.1 Deriving the equation of motion	60
	3.2.2 Unforced motion with damping	64
	3.2.3 Forced motion with damping	66
	3.2.4 Forced motion without damping	69
4	Geometric methods	72
	4.1 Phase diagrams	72
	4.1.1 Motivation	72
	4.1.2 Definitions and examples	73
	4.1.3 Phase diagrams for linear systems	81
	4.2 Nonlinear systems	92
	4.2.1 The Linearisation Theorem	92
	4.2.2 Lyapunov functions	96
5	Projects	101
	5.1 Ants on polygons	101
	5.2 A boundary value problem in mathematical physics	103
	5.3 What was the trouble with the Millennium Bridge?	104
	5.4 A system of ODEs arising in differential geometry	107
	5.5 Proving the Picard–Lindelöf Theorem	109
	5.5.1 The Contraction Mapping Theorem	109
	5.5.2 Strategy of the proof	111
	5.5.3 Completing the proof	113
	<i>References</i>	116
	<i>Index</i>	117
