CONTENTS

CHAPTER I

EXPERIMENTS IN DYNAMICS

Experiment 1. An example of conservation of angular momentum.

§ 1. Angular momentum of a particle about an axis. 2. Angular momentum of a system about an axis. 3. Method. 4. Experimental details. 5. Practical example . . . . . [Pages **1** to **7**]

Experiment 2. Kater's pendulum.

§ 6. Introduction. 7. Periodic time of a rigid pendulum. 8. Pendulum with two parallel knife edges. 9. Buoyancy and inertia of air. 10. The pendulum. 11. Observation of periodic time. 12. Practical example. 13. Theory of adjustment by sliding masses . . [Pages **7** to **16**]

Experiment 3. Moment of inertia of a body about a non-principal axis.

§ 14. Introduction. 15. The momental ellipsoid. 16. Apparatus. 17. Method. 18. Practical example . . . . [Pages **16** to **22**]

Experiment 4. Recording gyroscope.

§ 19. Introduction. 20. Relation between couple and precession in simplest case. 21. General case of motion with constant slope of axle. 22. Apparatus. 23. Experimental details. 24. The moments of inertia. 25. Relation of average to actual angular velocity. 26. Practical example. 27. Effect of the earth's rotation . . [Pages **22** to **42**]

CHAPTER II

THE STROBOSCOPE

Experiment 5. Determination of frequency of alternating current.

§ 28. Introduction. 29. Method. 30. Accuracy of standard frequency. 31. Practical example . . . . . [Pages **43** to **51**]

CHAPTER III

EXPERIMENTS IN ELASTICITY

§ 32. Transverse vibrations of a thin rod. 33. Mathematical theory of vibrations of rod. 34. Roots of $\cosh m \cos m = -1$. [Pages **52** to **58**]

Experiment 6. Determination of Young's modulus by vibrations of a rod.

§ 35. Introduction. 36. Calibration by tuning forks. 37. Determination of Young's modulus. 38. Ratio of m_1 to m_0. 39. Practical example. [Pages **58** to **63**]

More information

Experiment 7. Determination of frequency of alternating current by vibrations of a rod.

§ 40. Introduction. 41. Method. 42. Determination of frequency of current. 43. Practical example. 44. Experiment with several nodes. 45. Practical example . . . . . [Pages **63** to **69**]

Experiment 8. A bifilar method of measuring the rigidity of wires.

§ 46. Introduction. 47. Bifilar couple. 48. Apparatus. 49. Theory of method. 50. Experimental details. 51. Conversion table. 52. Practical example . . . . . [Pages **69** to **79**]

CHAPTER IV

OPTICAL METHODS OF DETERMINING ELASTIC CONSTANTS

§ 53. Introduction. 54. Thermal effects due to strain. 55. Mechanical work spent in stretching. 56. Application to bending of bar. 57. Mechanical work spent in shearing. 58. Geometry of helicoid. 59. Application to torsion of blade . . . . . [Pages **80** to **88**]

Experiment 9. Determination of elastic constants of glass by Cornu's method.

§ 60. Introduction. 61. Optical arrangements. 62. Method for measurement of Young's modulus and Poisson's ratio. 63. Theory of fringes for case of bending. 64. Method for measurement of rigidity. 65. Theory of fringes for case of twisting. 66. Comparison of results. 67. Practical example . . . . . [Pages **89** to **101**]

Experiment 10. Determination of elastic constants of glass by focal line method.

§ 68. Introduction. 69. Focal lines due to reflexion at curved surface. 70. Optical method of measuring curvatures of reflecting surface. 71. Determination of Young's modulus and Poisson's ratio. 72. Determination of rigidity. 73. Practical example . [Pages **101** to **113**]

Experiment 11. Measurement of Young's modulus by method of optical interference.

§ 74. Introduction. 75. Method. 76. Optical adjustments. 77. Experimental details. 78. Mechanical theory. 79. Theory and practice of optical measurements. 80. Practical example . [Pages **113** to **127**]

CHAPTER V

MATHEMATICAL DISCUSSIONS OF PROBLEMS IN SURFACE TENSION

§ 81. The nature of surface tension. 82. Surface energy. 83. Application of thermodynamics. 84. Surface energy and surface tension. 85. Geometry of spherical film. 86. Stability of spherical film. 87. General theory of stability of spherical film. 88. Relation between

More information

curvature of surface and normal force per unit area due to surface tension. 89. Principal curvatures of surface of revolution. 90. Form of meniscus in capillary tube . . . . . [Pages **128** to **142**]

THEORY OF CATENOID FILM

§ 91. Catenoid film. 92. Maximum length of catenoid. 93. Surface of catenoid. 94. Solution of equation $\coth n = n$. [Pages **143** to **148**]

THEORY OF CYLINDRICAL FILM

§ 95. Unduloid film. 95A. Cylindrical film with constant internal pressure. 96. Theory of stability of cylindrical film. [Pages **148** to **153**]

THEORY OF SESSILE DROP

§ 97. Sessile drops. 98. Introduction to theory. 99. Large finite drop. 100. Curvature at vertex. 101. Circle of contact. 102. Form of drop where x is comparable with c. 103. Determination of surface tension. 104. Determination of angle of contact . . . [Pages **153** to **163**]

CHAPTER VI

EXPERIMENTS ON SURFACE TENSION

§ 105. Soap solution. 105A. Cleaning of glass surfaces. [Pages **164** to **165**]

Experiment 12. Measurement of surface tension of liquid by capillary tube.

§ 106. Method. 107. Preparation of the tube. 108. Measurements. 109. Practical example . . . . . [Pages **165** to **171**]

Experiment 13. Measurement of surface tension of soap solution by torsion balance.

§ 110. Method. 111. Practical example . . [Pages **171** to **174**]

Experiment 14. Measurement of surface tension of liquid by torsion balance.

§ 112. Introduction. 113. Method. 114. Practical example [Pages **174** to **177**]

Experiment 15. Measurement of surface tension of soap solution by thread method.

§ 115. Method. 116. Practical example . . [Pages **177** to **180**]

Experiment 16. Measurement of surface tension of soap film by viscosity potentiometer.

§ 117. Method. 118. The bubble holder. 119. Note on design of apparatus. 120. Practical example . . . [Pages **180** to **185**]

Experiment 17. Measurement of surface tension of soap film by buoyancy method.

§ 121. Method. 122. Practical details. 123. Practical example [Pages **185** to **188**]

More information

Experiment 18. Study of catenoid film.
§ 124. Introduction. 125. Apparatus. 126. Method. 127. Practical example . . . . . [Pages **188** to **190**]

Experiment 19. Study of cylindrical film.
§ 128. Method. 129. Spherical caps left by collapsing cylindrical film. 129A. Cylindrical film with constant internal pressure. 129B. Unduloid film. 130. Practical example . . . . [Pages **190** to **196**]

Experiment 20. Measurement of surface tension of mercury by Quincke's sessile drop method.
§ 131. Introduction. 132. Method. 133. Optical discussion. 134. Practical example . . . . . [Pages **196** to **202**]

Experiment 21. Surface tension of interface between two liquids.
§ 135. Introduction. 136. Methods for pair of solutions of first class. 137. Methods for pair of solutions of second class. 138. Liquids. 139. Torsion balance. 140. Experimental details. 140A. Effect of change of surface of plate. 141. Surface tension of solutions in contact with air. 142. Practical example. 143. Form of interface [Pages **203** to **215**]

CHAPTER VII

EXPERIMENTS ON VISCOSITY

§ 144. Introduction. 145. Stresses in a viscous fluid due to shearing. 146. Heat produced by shearing. 147. Turbulent motion. 148. Distribution of velocity in a tube deduced from minimum heat production. 148A. Flow through tube of elliptic section. 149. Angular velocity of liquid between a fixed and a rotating cylinder found by minimum heat method . . . . . [Pages **216** to **225**]

Experiment 22. Determination of viscosity of a liquid.
§ 150. Introduction. 151. Method. 152. Calibration correction. 153. Practical example. 154. Notes on the method . [Pages **225** to **235**]

Experiment 23. Determination of viscosity of air.
§ 155. Introduction. 156. Calculation of velocity. 157. Calculation of pressure. 158. Correction for gravity. 159. Formula for viscosity. 160. Conditions for stream-line motion. 161. Experimental details. 162. Calibration correction. 163. Practical example [Pages **235** to **246**]

Experiment 24. Determination of viscosity of very viscous liquid by viscometer.
§ 164. Introduction. 165. Elementary theory. 166. Stability of stream-line motion. 167. The viscometer. 168. Experimental method. 169. Practical example . . . . . [Pages **246** to **254**]

CHAPTER VIII

MATHEMATICAL DISCUSSIONS OF PROBLEMS IN CONDUCTION OF HEAT

§ 170. Introduction. 171. Non-isotropic substances. 172. Difficulties of experimental work. 173. Steady radial flow from axis. 174. Non-uniform flow in a rod. 175. A simple conduction problem [Pages **255** to **264**]

CHAPTER IX

EXPERIMENTS IN HEAT

§ 176. Temperature. 177. Centigrade scales of temperature. 178. Mercury in glass thermometers. 179. International temperature scale [Pages **265** to **269**]

Experiment 25. Correction for the emergent column of a thermometer. § 180. Introduction. 181. Method. 182. Practical example [Pages **269** to **273**]

Experiment 26. Determination of thermal conductivity of copper. § 183. Introduction. 184. Apparatus. 185. Method. 186. Practical example. 186A. Correction for emergent columns [Pages **273** to **280**]

Experiment 27. Determination of thermal conductivity of rubber. § 187. Introduction. 188. Theory of method. 189. Practical example [Pages **280** to **284**]

Experiment 28. Distribution of temperature along a bar heated at one end.

§ 190. Introduction. 191. Measurement of temperature by thermocouple. 192. Method. 193. Practical example. [Pages **284** to **294**]

Experiment 29. Determination of mechanical equivalent of heat. § 194. Introduction. 195. Apparatus. 196. Method. 197. Calculation of correction for cooling. 198. Heat produced. 199. Work done. 200. Calculation of mechanical equivalent of heat. 201. Practical example. 202. Further discussion of correction for cooling [Pages **294** to **305**]

CHAPTER X

MATHEMATICAL DISCUSSIONS OF PROBLEMS IN SOUND

§ 203. Introduction. 204. Calculation of velocity of plane waves of sound . . . . . [Pages **306** to **310**]

Spherical Waves and Radiation of Energy

§ 205. Spherical waves. 206. Radiation of energy. 207. Radiation from a pulsating sphere. 208. Radiation in a conical space [Pages **310** to **319**]

THEORY OF RESONATORS

§ 209. Kinetic energy of radial stream of liquid. 210. Resonators. 211. Frequency of resonator. 212. Criticisms of theory of resonator. 213. Correction of volume due to potential energy of air in neck of resonator. 214. Resonator with multiple and equal openings. 215. General case of multiple openings. 216. "Conductivity" of opening of resonator. 217. Opening in a thin plane plate. 218. Circular opening. 219. Elliptical opening. 220. Opening of any form. 221. Resonator with thin-plate opening. 222. Correction for thickness of plate. 223. Decay by radiation of vibrations in a resonator. 224. Application to Helmholtz resonator. 225. Radiation from resonator with tubular neck. 226. Effect of viscosity. 227. Distribution of velocity in circular opening in thin plate. 228. Dissipation of energy in resonator with tubular neck. 229. Comparison of Helmholtz with tube-neck resonator. 230. Selectivity of a resonator . . . . . [Pages **319** to **344**]

CHAPTER XI

EXPERIMENTS IN SOUND

Experiment 30. Effect of temperature upon velocity of sound.
§ 231. Method. 232. Practical example . . [Pages **345** to **349**]

Experiment 31. Resonance with a bottle.
§ 233. Introduction. 234. Method. 235. Practical example
[Pages **349** to **351**]

Experiment 32. Resonator with multiple openings.
§ 236. Method. 237. Practical example . . [Pages **351** to **352**]

Experiment 33. Resonator with variable cylindrical neck.
§ 238. Introduction. 239. Estimation of F and H. 240. Correction for open ends. 241. Experimental details. 242. Practical example
[Pages **352** to **356**]

Experiment 34. Resonator with thin-plate opening.
§ 243. Method. 244. Correction for edge effect. 245. Practical example
[Pages **356** to **359**]

Note I. Awbery's method for combination of observations
[Pages **360** to **362**]

Note II. Exact equation for spherical waves . [Pages **362** to **363**]
