

CONTENTS

PREFACE	PAGE ix
<p>CHAPTER I. THE BASES OF PHOTOGRAPHY</p> <p>Sensitivity of silver compounds to light and the discovery of photography—Theory of photographic action—The nature of photographic emulsions—Sensitivity of emulsions and the characteristic curve—Colour sensitivity of emulsions—Sensitizing dyes—Correction filters—Resolving power of emulsions—Hypersensitizing.</p>	1
<p>CHAPTER II. THE LENS AND THE IMAGE</p> <p>Perspective and lens—Image formation and depth of focus—The action of the lens: refraction and chromatic aberration—Curvature of field—Spherical aberration—Coma—Astigmatism—Flare—Performance of a lens—Stops—<i>F</i> numbers—Depth of focus—Effect of filter upon focusing—Absorption of light by the lens—Marginal illumination—Sharpness and definition—Aerial light scattering—Diffraction and resolving power—Telephoto lenses—Wide-angle lenses—Soft-focus lenses.</p>	32
<p>CHAPTER III. THE MECHANISM OF THE CAMERA</p> <p>Principles of design—Methods of focusing. Field cameras—Reflex cameras—Coupled range-finders—The lens—The diaphragm—The shutter—Extra movements and attachments—Choice of camera—Care of camera—Ciné cameras.</p>	55
<p>CHAPTER IV. COLOUR PHOTOGRAPHY</p> <p>The three-colour principle—The development of methods of colour photography—Screen methods—Dye-coupling developer methods—The use of colour photography—Cinematography in colour.</p>	73
<p>CHAPTER V. MAKING A PICTURE</p> <p>The need for cleanliness—The dark room—The safelight—Washing arrangements—Taking a picture—Object matter and direction of view—Direction of illumination—Composition—Viewpoint and perspective—Aerial perspective—Lighting—Artificial lighting—Colour filters and their uses—Speed of emulsions and exposure—Actinometers and exposure meters—Exposure of moving objects—Correct tone reproduction—Routine directions for making an exposure.</p>	82
<p>CHAPTER VI. DEVELOPING AND PRINTING</p> <p>Making up and keeping solutions—Desensitizing—Development and developers—Choice of a developer—Temperature coefficient of rate of development—Energy of developers—Technique of development—Fine-grain developers—Physical development—Fixing and washing—Intensification—Reduction—Faults in negatives—Printing processes—Enlarging—Copying—Specular reflections.</p>	117

	PAGE
CHAPTER VII. SOME SCIENTIFIC APPLICATIONS	139
Photometry—Record photography—High-speed photography—Photomicrography—Optical methods for improving visibility in photomicrography—Astronomy—Photography by radiations outside the visible spectrum—Infrared photography—Recording of X-rays, electrons and other rays—Preparation of prints for publication—Conclusion.	
APPENDIX I. FORMULAE FOR SOLUTIONS	167
Developers for plates or films—Developers for bromide papers—Reducing solutions—Intensifiers—The Dufaycolor Process.	
APPENDIX II. GEOMETRY OF IMAGE FORMATION	176
INDEX	178

PLATES IN COLOUR

I	Reproduction of colours of soap film	<i>frontispiece</i>
II	Printing of Dufaycolor reseau	<i>facing page 74</i>
III	Reproduction of Dufaycolor picture	,, 76
IV	Processing of Kodachrome film	,, 78
V	Reproduction of Kodachrome picture	,, 80
