INDEX.

- Accident incidental to design, 154-157.
- Agassiz, L., view of species, 19, 16, 163, 191, 200; how he diverges from Darwin, 16, 117, 120, 199; correspondence of his capital facts with Darwin's, 19; theory theistic to excess, 14, 20-22, 154, 200; relation of tertiary to existing species, 49, 110; on age of Florida, 100; on prophetic types, 116; on intelligence of animals, 172; on destruction of species, 120; on geological time, 100, 162; on design in Nature, 154-156.
- Alaska, Sequoia fossil in, 228.
- Aldrovanda, insectivorous, 322.
- Analogy, use of, by Darwin, 47, 105; in proof of design, 365.
- Argyll, Duke of, on creation by law, 275.
- Aristotle, his definition of Nature, 389; his theistic view of Nature, 390.
- Atheism, relations of Darwinism to, 55, 58, 69, 138 *sq.*, 154, 258, 266 *sq.*, 269, 270, 279, 379; to doubt ordinary doctrine of final causes not atheistical, 138.
- Augustine, St., on the method of creation, 357.
- Austin, Mrs., on the California pitcher-plant, 330.
- Bacon, Lord, view of Providence, 144.
- Baird, Prof., on variation in the birds of North America, 244.
- Bartram, William, on insectivorous plants, 305.
- Beech, species of, now extending their limits, 186.
- Bentham, on the derivative hypothesis, 236, 242.
- Bible, does not determine the mode of creation, 131, 291; a mirror of Providence, 142; interpretation of, partly a matter of probabilities, 261.
- Billiard-balls illustrate the proof of design, 62-64, 69-74, 77.
- Birds, instinct of, 171.
- Bladderwort, insectivorous, 323.
- Boomerang, illustrating the method of proving design, 72.
- Breeding, thorough, 30; tendency of, to reversion, 341; close, evil effects of, 354.
- British flora, discrepancy of views regarding, 34.
- Broccoli, origin of, 111.
- Brongniart, Adolphe, on distribution of species in tertiary period, 114.
- Brown, Robert, scientific sagacity of, etc., 284-289.
- Budding, propagation by, relation of, to deterioration of varieties, 341.
- Butler, Bishop, definition of *natural*, 61, 160, 259, 269.
- Butterwort, insectivorous, 325; digestion of, 325.
- Cabbage, origin of, 111.
- California, gigantic trees of, 207, *see* Sequoia; general characteristics of flora of, 208, 218; unlike that of the Atlantic coast, 217.
- Canby, observations of, on sundew, 293, 300, 322; on Sarracenia, 330.
- Catastrophes in geology, 120.
- Cattle, origin of breeds of, 111; increase of, in South America, 39, 117; existence sometimes dependent on insects, 41.
- Cauliflower, origin of, 111.
- Caulophyllum, and relatives, dispersion of, 222.
- Cause, efficient, three theistic views of, 158-168.
- Cedar, species of, 188.
- Chair, classification of, 167.
- Chance, not admissible, 42, 55, 59, 68, 76-84, 147, 153, 168, 170, 235.
- China, relation of flora of, to that of North America, 214 *sq.*
- Classification, difference of opinion upon, 34; expresses *judgments*, not *facts*, 35, 122, 184, 203, 289; expresses only the coarser gradations, 126, 142; *see* Species, and Gradation.
- Climate, as affecting the numbers of a species, 40; acts indirectly, 41; of the north in early periods, 114, 224.
- Climbing-plants, 331-337; feel as well as grow, 332; comparative advantage of their habits, 334; cause of motion, 336.
- Cobbe, Frances Power, on the relation of God to the Universe, 234.
- Cohn, Prof., on Utricularia, 324.
- Complexity of Nature, 41.
- Competition sharpest between allied species, 42.
- Condor, rate of increase, 39.

INDEX.

- Contingency, Darwinian hypothesis based on, 52, 54, 76, 84, 86; mingled with design, 274.
- Continuity of Nature, 123, 190, 234, 258, 273, 289, 323, 331, 379.
- Creation, three views of, theistic, 158, 357.
- Cretaceous flora, relation of, to present flora, 233.
- Cross-breeding, essential to longevity and vigor of species, 33, 346, 354.
- Curtis, Rev. Dr., M. A., his account of *Dionæa*, 293.
- Cuvier, on the part animals have to play in nature, 356.
- Cypress, the bald, relation of, to *Sequoia*, 213, 225, 230.
- Darwin, Charles, standing as a naturalist, 133, 288 *sq.*, 287, 297; how his view of species differs from the ordinary views, 13, 16; how from Agassiz's view, 16, 117, 129; summary of arguments, 36, 109-116; his distinctive work, 37, 61, 273, 308-309, 327, 337; where his argument weakest, 47, 169; where strongest, 121; his candor, 169, 286; harmonizes teleology and morphology, 52, 121, 234, 247, 258, 322, 337, 357, 375; does not deny creative intervention, 61, 93, 143, 149; does not sneer at the doctrine of design, 139, 140; never depended exclusively on natural selection, 104; view of instinct, 173; no atheistical intent, 258, 263-270, 274; experiments with *Dionæa*, 294, 321.
- Darwinism, still an hypothesis, 53 *sq.*, 119, 128, 135, 179, 274; compatible with atheism, but not inconsistent with theism, 54, 130, 159, 258, 279, 379; more compatible with theism than the theory of gravitation, 55, 235; relation to teleology, 57, 84-86, 121, 145, 151-152, 176, 234, 247, 258, 271, 272, 288, 337, 357; premonitions of, 83, 94, 238; relations to Lyell's geological theories, 103, 109, 110; objections to, 168-177; argument for, from the distribution of the species of the oak, 190; as stated by Wallace, 191; present attitude of naturalists to, 234, 236-251, 279; implications of, regarding the indefinite vitality of species, 348.
- Darwinian Teleology, accounts for abortive and useless organs, 371; for the apparent waste of Nature, 376, 377; for imperfections and failures, 378.
- Dawson, on derivation of species, 236, 246.
- De Candolle, Alph., on the oak, 173; definition of species, 201, 202; derivation of species, 186, 200, 236, 239; on multiple origin of species, 191, 239.
- De Candolle, conception of the struggle for existence, 37.
- Des Hayes, on gradation of species in the tertiary period, 49, 110.
- Design *versus* Necessity, 62-86; distinguished from purpose, 358, 359; how proved, 70-76, 84, 150-152, 168, 301, 362, 365, 371; *natural selection* a substitute for it, 69; can never be *demonstrated*, 70, 365; method of proof illustrated by pump, 71; by boomerang, 72; by movement of billiard balls, 62-64, 69-74, 77; by the eye, 79-84; by machinery, 85, 278; may act through variation and natural selection, 148, 247, 272, 275, 288; evidence of, complete in the individual, 151, 364, 366; all Nature a manifested design, 152, 153, 176, 274, 337, 379; manifest in insectivorous plants, 300, 301, 314, 322; in climbing plants, 335, 336; consistent with three views of efficient cause, 158 *ff.*, 272; not disproved by negative instances, 369, 370, 380.
- Dionæa*, account of, 291-295, 320; digests animal food, 319, 321.
- Diseases, contagious, relation of, to natural selection, 241.
- Divergence, how produced by natural selection, 91.
- "Division of labor" in the organic world, 43, 91.
- Dogs, of diverse origin, 27.
- Domestication, effect of, upon variation, 26, 29, 32, 184, 339, 340.
- D'Orbigny, on destruction of species, 120.
- Drosera, 291, 295-301, 310; sensitiveness of, 312, 317.
- Dubuque, address of Professor Gray at, 205.
- Effect, as result of complex causes, 62-86.
- Elephant, possible rapidity of increase, 38; Falconer on, 193-196.
- Embryology, 118.
- Equilibrium of natural forces, 41, 42.
- Evolution and theology, 252-265.
- Evolutionary hypotheses should be theistic, 176, 199, 279, 381, 389, 390.
- Evolutionary teleology, article on, 359-390.
- Extinction of species, not by cataclysms, 41.
- Eye, formation of, 59, 60; illustrating design, 79-84.
- Falconer, on the affinity of the mammoth with the elephant, and the bearing of the facts on Darwinism, 193-196.
- Fertilization of plants, contrivances for, 346, 375-377.
- Final causes, *see* Teleology.
- Flounder, *see* *Pleuronecta*.
- Flower, Prof., on the derivative hypothesis, 236, 243.
- Fly-trap, *see* *Dionæa*.
- Forbes, Edward, on the dispersion of species, 191.

INDEX.

393

- Fulmar petrel, the remarkable increase of, 39.
- Gaston de Saporta, Count, on the origin of tertiary species, 197, 198.
- Genealogical tree, 17.
- Genesis, the account of creation in, 181, 261, 265.
- Genus, difficult to define, 184, 204.
- Geology, incompleteness of record, 48, 169, 268.
- Ginseng, common to America and Northern Asia, 222.
- Glacial period, as accounting for the distribution of species, 114, 115, 224; effect of, on mammoth and elephant, 193-196.
- Glyptostrobus of China, relation to Sequoia, 214, 225, 230.
- God, relation of, to Nature, 54, 58, 144-168, 199, 234, 257, 275; to the universe, 59; his presence required in a long process of adaptation as well as in a short one, 60, 149 *sq.*, 234, 256; immanence in Nature, 61, 159; his thoughts eternal; yet manifested in succession, 167; veracity of, in the works of Nature, 371.
- Göppert on the antiquity of Taxodium distichum and other plants, 228.
- Gradation, from tertiary species downward, 34, 101, 114, 115, 200; extent of, in fossils of consecutive formations, 48; between the tertiary and the present, 49, 110, 112; principle of, in organic Nature, 123, 129; between plants and animals, 124, 289, 303, 309, 323; ungulate, 243; towards individuality, 125; coarser in systems of classification than in Nature, 126, 142, 184, 289; in climbing plants, 335; in insectivorous plants, 327; of, in the species of oak, 180, 203; between the cretaceous and tertiary formations, 197.
- Grady, Mr. B. F., on lure in *Sarracenia*, 303, 305.
- Greenland, fossil plants of, 231.
- Grafting, effect on longevity of a species, 341 *ff.*
- Grisebach, Prof., on geographical distribution of species, 229.
- Hayden, on fossil Sequoia in the Rocky Mountains, 228.
- Henslow, Rev. George, on evolution and theology, 252, 256.
- Heer, on origin of species, 192; on the antiquity of Taxodium and other species, 227 *sq.*
- Hobbes, theory of society, 37, 89.
- Hodge, Dr. Charles, on evolution and theology, 253, 257-261; on Darwinism, 269-283.
- Horses, increase of, in South America, 39, 117; a former species existed in South America, 118.
- Herschel, Sir John, on the relation of God to Nature, 275.
- Hilaire, Geoffroy St., opposition of, to teleology, 356.
- Hooker, Dr. J. D., on Nepenthes and *Sarracenia*, 331.
- Hume, on proof of design in Nature, 363.
- Hybrids, 50; how to test sterility, 51; sterility of, 175.
- Hypothesis, domain of, 108, 119, 131, 182, 250, 259, 260.
- Increase, rate of, in elephants, 38; among cattle and horses in South America, 39, 117, 118; causes affecting, 40.
- Individuality, attained gradually, 125, 343; not fully attained by plants, 341.
- Inductive science, domain of, 14, 95; limitation of, 47; process of, 23, 70 *sq.*, 98, 101, 107, 108, 112, 201, 202, 244, 250; Darwin's method conformable to, 37, 103, 111, 113, 114, 115, 119, 122, 244, 260; postulates the veracity of Nature, 371.
- Inheritance, more mysterious than non-inheritance, 29; the only known cause of likeness in living species, 227.
- Insects, agency of, in fertilization, 287.
- Insectivorous plants, 289-308; and climbing, 308, 337.
- Instinct of animals, 171; of the Talegal, 171.
- Intelligence of the higher animals, 172-174.
- Intention, *see* Design.
- Interbreeding, when close, diminishes vigor and fertility, 32, 287.
- Ivy, Poison (*Rhus Toxicodendron*), common to America and Japan, 221.
- Jackson's "Philosophy of Natural Theology," 363.
- Japan, relation of flora to that of North America, 215 *sq.*; Grisebach on, 226.
- Jussieu, A. L., definition of species, 163, 201.
- Kale, origin of, 111.
- Kingsley, Rev. Charles, on "Evolution and Theology," 299, 282.
- Knight, Andrew, on effect of budding, 341-343.
- Kohlrabi, origin of, 111.
- Lamarek, his theory of transmutation, 23, 52, 171.
- Le Conte, Prof. Joseph, on religion and science, 252, 262.
- Leibnitz charges Newton with subverting natural theology, 137, 258.
- Lesquereux, on fossil Sequoia, 229, 232; on the relation of present flora to that of the cretaceous age, 233.
- Libocedrus, distribution of, 230.

- Lindley, on the persistence of varieties, 338.
- Linnaeus, definition of species, 12, 201; diagnosis of the three kingdoms of Nature, 308.
- Lyell, Sir Charles, on the imperfection of the geological record, 48; on gradation of species in later formations, 49, 110; theory of geological changes, 103, 109; acceptance of Darwinism, 238.
- Macbride, Dr. James, observations on *Sarracenia*, 304.
- Machinery, does not dispense with design, 85.
- Malthus, on struggle for existence, 37, 89.
- Mammoth, Falconer on, 193-196.
- Man, separation of, from the quadrumania, 50; mental power of, not necessarily acquired, 59; may be an exception to the rule, 92, 93, 256; unity of origin, 99, 176; antiquity of, 100.
- Materialism, philosophy of, rejected, 126, 158, 174; note, 176, 235, 250.
- Mellichamp, Dr., on pitcher plants, 329.
- Mill, J. S., on creation by intelligence, 361, 374.
- Morphology, 52, 121, 122; reconciled with teleology, 121, 288.
- Mysteries, of natural operations, 53, 158, 317, 318, 327; of Providence and Nature the same, 153; in the action of sundew, 312, 317; in similarity of offspring to parents, 383; proper to be inquired into, 390.
- Nature, definition of, 61, 160, 259, 269, 389; theistic views of, 158-165, 249, 257, 390; *see* Continuity of; veracity of, 370.
- Natural history, province of, 209, 260, 268.
- Natural selection, 34, 89; method of operation, 44; a very-expansive principle, 273; supposed recent illustrations of its effect, 45; still an hypothesis, 54, 135, 274; not inconsistent with natural theology, 87 *sq.*, 187 *sq.*, 255, 272, 386; how it produces divergence, 43, 91; not disproved by special miraculous exceptions, 93; not the exclusive cause of modification, 104, 195, 337, 386; extent of operation, 104-109, 273; not to be confounded with variation, 195.
- Natural theology unshaken by physical science, 22, 53, 84, 89, 95, 187, 150, 151, 152, 259, 337.
- Naudin, Charles, views regarding the evolution of species, 349 *sq.*
- Nectarine, origin of, 111.
- Necessity *versus* design, 62-86; how related to Darwinism, 69, 75.
- Nepenthes, 331.
- Nettle-sting, an example of the natural production of a complex organ, 387.
- Newberry, on the antiquity of *Sequoia*, 230, 232.
- Newton, Sir Isaac, charged with subverting natural theology, 137, 258.
- North America, botany of, 206; former climate of, 224; birds of, 244.
- Novelties, difficult to accept, 87, 103, 247.
- Oak, De Candolle on, 178, 203; Linnæus on, 187; as illustrating the origin of species, 179; a waning genus, 186; dispersion of species, 188; in the Tertiary deposits, 189; waste of pollen in, 358.
- Objections to Darwinism, philosophical, 135; absence of close gradation, 47, 63; distance of man from quadrumania, 50; hybridism, 50, 51; specialization of organs, 52; novelty, 57, 103, 245.
- Optimism, absurdity of, 141.
- Orchids, fertilization of, 287.
- Ostrich, increase of, 39.
- Owen, Prof., evolutionary tendencies of, 88, 102 (134, 136?) 233.
- Paley, on teleology, 52, 57.
- Pantheism, 55, 58.
- Paraguay, relation of insects to cattle in, 41.
- Parsimony, law of, 360 (*see* Continuity of Nature).
- Peach, origin of, 111.
- Perfection, relative, 141.
- Phyllotaxis, law of, 196.
- Pictet on Darwinism, 105, 108, 109, 112, 127; on geological time, 162.
- Pigeon, known extent of variation, 27; why chosen for experiments, 28; reversion of, 31.
- Pinguicula, insectivorous, 325.
- Pitcher Plant, *see* *Sarracenia*.
- Plants, insectivorous and climbing, 289-303, 303-337.
- Pleuronecta, facts concerning, 372, 383.
- Presumption against novelties, 87, 131, 132.
- Probability, how far a guide, 47, 107, 260; an element in scriptural interpretation, 260.
- Progress in the succession of organic beings, 115 *sq.*, 118.
- Providence, mysteries of, compared with those of Nature, 53, 142, 177; Lord Bacon's view of, 144.
- Pump, as illustrating the proof of design, 71.
- Purpose, *see* Design; distinguished from design, 359.
- Quercus, *see* Oak.
- Rape, or. Colza, origin of, 111.

INDEX.

395

- Redwood, of California, may be disappearing, 212, *see* Sequoia.
- Religion, as affected by Darwinism, 54, 175, 176; and Science, by Joseph Le Conte, 261.
- Representative species, definition of, 220, 226.
- Resemblance of progeny to parent, cause of, inscrutable, 29.
- Revelation does not determine the mode of creation, 181, 260, 261.
- Reversion to aboriginal stock, 339, 341; takes place in pigeons, 31; reason of, 31; not proved in general, 31, 339.
- Roth, observations of, on *Drosera*, 296, 297.
- Rudimentary organs, 371.
- Rutabaga, origin of, 111.
- Sachs, his view of the motion of climbing plants, 336.
- Saporta, Count Gaston de, on origin of tertiary species, 197, 198.
- Sarracenia, insectivorous habits of, 301, 302, 328.
- Science does not concern itself with primary cause, 145, 259, 263, 268.
- Scientific spirit, the, 95, 255, 259.
- Selection, artificial, 30; may preserve a variety which could not remain in a natural state, 339; methodical, 31; unconscious, 30; natural, 34, 89, 90; probably hinders, 135, 196, 337; De Candolle's estimate of, 192; Heer's view of, 192; Falconer on, 198-196; confounded with variation, 195, 389; relation of, to contagious diseases, 241; to vaccination, 241; compared to the rudder of a ship, 386.
- Sequoia and its history, 205-235; age of, 207, 213; its isolation, 208, 230; antiquity of, 229, 233; relations to the bald cypress, 213, 225; to *Glyptostrobus*, 214, 225; to tertiary species, 214, 228; in the arctic zone, 229; to cretaceous species, 233.
- Sexual reproduction, meaning of, 347.
- Sisley, Mr., on individuality and longevity of species, 344.
- South America, former existence of the horse in, 117.
- Species, ordinary view of, 11, 16, 113, 129, 163, 199, 200, 201; Agassiz's view of, 13-16, 117, 163, 164, 168, 191, 199; Darwin's view of, 13-16, 117; Dana's view of, 11; De Candolle's view of, 191, 201, 202; Jussieu's definition of, 163, 201; Grisebach's definition of, 226; Linnaeus's definition of, 12, 163, 201; average numbers of individuals in, 39, 40; arranged in clusters, 97, 118; community of origin, how inferred, 12, 35, 111, 112, 113, 122, 182, 164, 183, 201, 233, 255, 264; distribution of, 98, 113, 191, 192, 200; in the tertiary period, 114; in time, 118, 233, 243; transmutation of, how to be proved, 23; localization of, 113, 114, 118, 200; connection of, illustrated by a genealogical tree, 17 *sq.*; physical connection of, not inconsistent with intellectual, 22, 53, 54, 95, 131, 146, 147, 156, 166, 167, 176, 234, 275, 278, 279, 357, 360, 385, 389; do they wear out? 347; difficulty of defining, 90, 97, 111, 122, 126, 184, 244; stability and persistency of, 175, 185, 193, 338 *sq.*, 348; mode of origin necessarily hypothetical, 129, 130, 131, 186; of the oak, 179 *sq.*, 203.
- Spencer, Herbert, philosophy of, 250.
- Spitzbergen, fossil *Sequoia* of, 228, 229.
- Spontaneous generation, rejected by Darwin, 93.
- St. Clair, George, on Darwinism and Design, 269, 280.
- Sterility of hybrids, how far proved, 50; test of theories regarding, 52.
- Struggle for existence, 37, 38, 41, 89, 382; conceived by De Candolle, 37.
- Sundew, *see* *Drosera*.
- Taxodium (*see* Cypress).
- Teleology, Paley on, 52, 57; of Darwinism, 57, 84-86, 322, 374; reconciled with morphology, 121, 210, 288, 357; denial of ordinary doctrine of, not atheism, 138-140, 154, 258; not disturbed by Darwinism, 145, 149, 151-153, 176, 247, 322, 337, 360, 371, 375; evolutionary, article on, 356-390; old doctrine of, needs reconstruction, 370, 374, 380; old doctrine of, does not account for abortive and useless organs, 370; nor for the wastefulness of Nature, 372; nor for imperfections and failures, 378.
- Tertiary period, gradation of species in, 84, 49, 101, 110, 200; distribution of species in, 112-115, 228-232; no hiatus between the cretaceous and, 197, 198, 233.
- Theism, as affected by Darwinism, 54, 131, 176, 234, 235, 248, 252-265, 307, 337, 379; by other physical theories, 54-56; by nebular hypothesis, 137; Darwinism compatible with, 67, 144 *sq.*, 151-157, 199, 249, 288, 379; three views of Nature compatible with, 158-163, 177, 275, 277.
- Theologians, interest of, in evolutionary hypothesis, 252; attitude toward, 253, 254, 261; deal largely in probabilities, 260.
- Time, geological evidence of, 98-100, 162.
- Transmutation, theories of, no novelty, 23; Lamarck's theory of, 23; of the "Vestiges of Creation," 24.
- Treat, Mrs., of New Jersey, observations on sundew, 298; on *Utricularia*, 324.
- Truth, search for, laudable, 95.

INDEX.

Tulloch, Principal, on the philosophy of miracles, 199.

Turnip, origin of, 111.

Tyndall, Prof., on matter, 390.

Types, prophetic and synthetic, of Agassiz, 116.

Ungulata, affiliation of, 243.

Unity of the human race, 179.

Universe, relation of God to, 57-59, 131, 152, 167.

Utricularia, or bladderwort, insectivorous, 324.

Variation, cause of, unknown, 12, 76, 84, 157, 158, 170, 196, 337, 338; an inherent tendency, 15, 96, 337, 338, 388; of domestic animals not exceptional, 26; extent of, undetermined, 27, 97, 111, 118, 203; effect of domestication upon, 26, 29, 203; more likely than inheritance to be explained, 29, 207; not in every direction, 147, 387; may be led along beneficial lines, 148; among wild species, 174, 203; in the oak, 181, 185,

187; in the birds of America, 244; compared to the wind which propels a ship, 336.

Varieties, do not differ from closely related species, 35, 90, 97, 111, 112, 123-126, 185, 200, 203; less definite than species, 184; do they wear out? 338 *sq.*, 345.

Venus's Fly-trap (*see* *Dionæa*).

Vestiges of creation, characterized, 24, 237.

Wallace, A. R., formula of, concerning the origin of species, 119, 191.

Wastefulness of Nature, 89, 372-374; not objectless, 375, 377; of pollen in pine and oak trees, 375; in mould fungi, 377.

Westminster Review, article in, on design in Nature, 361 *sq.*

Whewell, on divine interposition in Nature, 259, 269.

Winchell, Alexander, on the doctrine of evolution, 269, 281.

Wind carriage, cheap, 377.

Wyman, Prof., on pitcher plants, 329.

THE END.
