INDEX TO VOL. II.

- Astigmatic lenses, effect of combined, 174
- astigmatism of a defective eye, mode of measuring, 172
- attractions, propositions respecting, 105, 124
- Bessel's functions, calculation of, for large values of the variable, 329
- Britannia Bridge, deflection liable to be produced in, by a travelling load, 219
- Brewster's apparent new polarity of light, explanation of, 24
- Challis, Prof., explanation of difficulties in the theory of sound discovered by, 51, 82
- Clairaut's theorem, 112, 142
- Decomposition, in a particular way, of three functions representing components of displacement, &c., 256
- differential equation, discussion of a, relating to deflection produced by a travelling load, 178
- diffraction, dynamical theory of, 243
- diffraction of polarized light, experiments on, 290
- disturbance in an isotropic medium, due to a force continually acting, 276
- disturbances, small, of a dynamical system due to initial (1) displacements, (2) velocities, deduced from each other, 261
- Earth's original fluidity, review of geotetic and gravitational evidence in favour of, 120
- elastic solid, propagation of an arbitrary disturbance in an, 257
- ether, constitution of the luminiferous, 8
- eye (see astigmatism)
- Fresnel's formulæ for the intensities of reflected and refracted light, experimental evidence of the correctness of, 97
- Gravity, variation of, at the surface of the earth, 131
- Haidinger's brushes, 362
- Helmholtz's propositions respecting vortex motion, 47
- Holtzmann's experiments on diffraction of polarized light, 327
- hydrodynamics, notes on, 1, 36, 221
- Instability of motion of sphere in a perfect fluid, 8
- interference bands seen in the spectrum, under peculiar conditions, explained, 14
- interference fringes, fictitious displacement of, 361
- irregularities of earth's surface, effect of, on local gravity, 149
- Lorenz's researches on diffraction of polarized light, 328
- Moon, effect of earth's oblateness on, independent of hypothesis of earth's original fluidity, 118, 132, 142
- Newton's rings, formation of the central spot of, beyond the critical angle, 56;

INDEX TO VOL. II.

- sudden disappearance of central spot of, on increasing the angle of internal incidence, 80; explanation of the perfect blackness of the central spot of, 89; mode of disappearance of, in passing the critical angle, 358
- Numerical calculation of a class of definite integrals and infinite series, 329
- Pendulum results applicable to the determination of the earth's figure, irrespective of hypotheses respecting internal distribution of matter, 140
- polarized light, direction of vibrations in, determined by experiments on diffraction, 317
- precession and nutation, moment of force causing, is independent of hypotheses respecting distribution of matter in the earth, 118, 132, 142
- Railway Bridges, differential equation relating to the breaking of, discussed, 178
- rarefaction a necessary accompaniment of condensation in a sound-wave propagated from a centre, 83
- reflexion, metallic, 360
- refraction of light beyond the critical angle, 57
- reversion, application of the principle of, to the demonstration of two laws relating to the reflection of light, 90
- ring, single bright, surrounding a dark centre, in connexion with Newton's rings, 75
- Secondary wave of light, law of disturbance in, determined, 280
- semi-convergent series, establishment and application of, 329
- sound, on a difficulty in the theory of, 51; on some points in the received theory of, 82
- sound-wave, alteration of the type of, when the motion is not small, 52
- sphere, steady motion of, in a viscous fluid, 10
- Stanley, Capt., comparison of observations made by, on waves in open sea, with theory, 239
- Vortex motion, Helmholtz's propositions respecting, deduced from Cauchy's integrals, 47
- Wave length, determination of, corresponding with any point of the spectrum, 176
- waves, 221
- Willis, Prof., discussion of an equation relating to experiments by, 178
