

INDEX TO VOLUME V.

[The numbers refer to pages.]

- Actinometer, 129; on use of, 137.
- Anemometers, experiments on whirled, 73; theory, 93, 96.
- Apertures, limit to microscopic, 36.
- Asymptotic expansions, direct determination of constants in formulæ connecting, 223.
- Chemical phases, coexistent, 226.
- Chemistry of flame, 235.
- Crookes, Sir W., observations on viscosity in high vacua, reduction of, 100; radiometers, 34; fractionation, 288.
- Crystals, iridescence due to twin strata, 164; Lord Rayleigh on, 177, xxi.
- Crystalline plate, focussing of images seen through, 6.
- Differential operators, formulæ in, 1.
- Diffraction of discrete optical pulses, 266, 275.
- Diffraction spectra, focussing of, 357.
- Dimensions, theory of, applied to anemometers, 96; to vibration of a disc *in vacuo*, 104, 115.
- Dispersions, easy determination of relative optical, 40.
- Double refraction, on theories of, 21.
- Electric discharge, spiral, 3.
- Examination papers, Tripos, 1846—49, 296; Smith's Prizes, 1850—82, 304.
- Flames, detection of suspended matter in, 222; reactions in, 235; conditions of combination in, 237.
- Flexure of beams, effect of surface-loading, 238; compared with experiment, 242.
- Focal lines, across crystalline plate, 7.
- Fractionation, chemical, theory of, 288.
- Graphical representation of coexistent chemical phases, 226; applied to ternary alloys, 229.
- Harmonic analysis, detection of unknown periods, 52.
- Obituary, by Lord Rayleigh, ix.
- Objectives, secondary tints of, 42.
- Opals, colours of, 178.
- Phosphorescence, fatigue of, discharge by heat and by long waves, 118.
- Photographs, light border in, 118; reversal in, 121; effect of imperfect correction of object glass, 122.
- Polarization of light reflected from flames, 232.
- Radiometers, effects of heat-absorption by the glass, 24.
- Radiometers, with concave or rough discs, 34.
- Reflection, selective, from twin strata in crystals, 164, xxi.
- Röntgen rays, nature of, 255, 256.
- Semi-convergent expansions, determination of, 221; the discontinuity in the multiplying constants traced, 283.

Cambridge University Press

INDEX.

- Solar observations, scheme of, 125; solar radiation, 126, 243; lag, 247; influence on meteorology, 130; on Earth's magnetism, 131; theory, 132; comparison of photographs, 134.
- Solar Physics, reports of Committee on, 125.
- Spectra, adjustment of compared, 69.
- Spectra, determination of by interpolation, 294.
- Steady radiation contrasted with the pulses of the Röntgen rays, 270.
- Stokes' theorem on vectors, 320.
- Stream lines for perfect liquid imitated in a viscous film, 278.
- Sunshine recorder, design and use of a, 54.
- Thermal absorption, 31.
- Transparency to dark heat, 119.
- Tripes, Mathematical, problem papers 1846—49, 296.
- Viscosity of gases in high vacua, limits of Maxwell's law tested, 100; free path, 116.
- Viscosity of air, Tomlinson's experiments, 180, 215; effect of aqueous vapour, 200; effect of varying thickness of sheared stratum in Maxwell's experiments, 204, 278.
- Viscosity, logarithmic decrement due to combined translatory and rotatory motions, 207.
- Viscous film, stream lines in its shearing motion, 278.
- Wave, highest of uniform propagation, 140, 146; J. H. Michell on, 149.
- Wave, solitary, 157, 160, 163.
- Wave surface, umbilici of, 23.
