CONTENTS

CHAPTER I

CONTINUITY

ART.		PAGE
1.	Continuous Variation	1
2.	Upper or Lower Limit of a Sequence	2
3.	Application to Infinite Series. Series with positive terms	5
4.	Limiting Value in a Sequence	7
5.	Application to Infinite Series	10
6.	General Definition of a Function	13
7.	Geometrical Representation of Functions	14
8.	Definition of a Continuous Function	15
9.	Property of a Continuous Function	16
10.	Graph of a Continuous Function	18
11.	Discontinuity.	19
12.	Theorems relating to Continuous Functions	20
13.	Algebraic Functions. Rational Integral Functions	22
14.	Rational Fractions	24
15.	The Circular Functions.	27
16.	Inverse Functions	29
17.	Upper or Lower Limit of an Assemblage	30
18.	A Continuous Function has a Greatest and a Least Value	32
19.	Limiting Value of a Function	34
20.	General Theorems relating to Limiting Values	35
21.	Illustrations	35
22.	Some Special Limiting Values	36
23.	Infinitesimals	39
	<i>Examples I, II, III, IV</i>	40

CHAPTER II

DERIVED FUNCTIONS

24.	Introduction. Geometrical Illustration	45
25.	General Definition of the Derived Function	46
26.	Physical Illustrations	48
27.	Differentiations <i>ab initio</i>	49

Cambridge University Press

978-1-108-00534-0 - An Elementary Course of Infinitesimal Calculus

Horace Lamb

Table of Contents

[More information](#)

viii

CONTENTS

ART.		PAGE
28.	Differentiation of Standard Functions	50
29.	Rules for differentiating combinations of simple types. Differentiation of a Sum	52
30.	Differentiation of a Product	53
31.	Differentiation of a Quotient	54
32.	Differentiation of a Function of a Function	57
33.	Differentiation of Inverse Functions	59
34.	Functions of Two or more Independent Variables. Partial Derivatives	62
35.	Implicit Functions	64
	<i>Examples V, VI, VII, VIII, IX, X</i>	66

CHAPTER III

THE EXPONENTIAL AND LOGARITHMIC FUNCTIONS

36.	The Exponential Function	72
37.	The Exponential Series	73
38.	Addition Theorem. Graph of $E(x)$	76
39.	The number e	77
40.	The Hyperbolic Functions	79
41.	Differentiation of the Hyperbolic Functions	82
42.	The Logarithmic Function	83
43.	Some Limiting Values	84
44.	Differentiation of a Logarithm	86
45.	Logarithmic Differentiation	87
46.	The Inverse Hyperbolic Functions	88
47.	Differentiation of the Inverse Hyperbolic Functions	89
	<i>Examples XI, XII, XIII, XIV</i>	90

CHAPTER IV

APPLICATIONS OF THE DERIVED FUNCTION

48.	Inferences from the sign of the Derived Function	95
49.	The Derivative vanishes in the interval between two equal values of the Function	98
50.	Application to the Theory of Equations	99
51.	Maxima and Minima	101
52.	Algebraical Methods	106
53.	Maxima and Minima of Functions of several Variables	107

Cambridge University Press

978-1-108-00534-0 - An Elementary Course of Infinitesimal Calculus

Horace Lamb

Table of Contents

[More information](#)

CONTENTS

ix

ART.		PAGE
54.	Notation of Differentials	108
55.	Calculation of Small Corrections	109
56.	Mean-Value Theorem. Consequences	111
57.	Total Variation of a Function of several Variables	113
58.	Application to Small Corrections	115
59.	Differentiation of a Function of Functions, and of Implicit Functions	116
60.	Geometrical Applications of the Derived Function. Cartesian Coordinates	117
61.	Coordinates expressed by a Single Variable	120
62.	Equations of the Tangent and Normal at any point of a Curve	121
63.	Polar Coordinates	123
	<i>Examples</i> XV, XVI, XVII, XVIII, XIX, XX	125

CHAPTER V

DERIVATIVES OF HIGHER ORDERS

64.	Definition, and Notations	141
65.	Successive Derivatives of a Product. Leibnitz's Theorem	143
66.	Dynamical Illustrations	145
67.	Concavity and Convexity. Points of Inflection	146
68.	Application to Maxima and Minima	148
69.	Successive Derivatives in the Theory of Equations	149
70.	Geometrical Interpretations of the Second Derivative	149
71.	Theory of Proportional Parts	153
	<i>Examples</i> XXI, XXII	155

CHAPTER VI

INTEGRATION

72.	Nature of the Problem	161
73.	Standard Forms	163
74.	Simple Extensions	165
75.	Rational Fractions with a Quadratic Denominator	166
76.	Form $\frac{ax+b}{\sqrt{Ax^2+Bx+C}}$	170
77.	Change of Variable	172
78.	Integration of Trigonometrical Functions	175
79.	Trigonometrical Substitutions	177

Cambridge University Press

978-1-108-00534-0 - An Elementary Course of Infinitesimal Calculus

X

CONTENTS

ART.		PAGE
80.	Integration by Parts	178
81.	Integration by Successive Reduction	180
82.	Reduction Formulæ, continued	181
83.	Integration of Rational Fractions	183
84.	Case of Equal Roots	185
85.	Case of Quadratic Factors	186
86.	Integration of Irrational Functions	189
	<i>Examples</i> XXIII, XXIV, XXV, XXVI, XXVII, XXVIII, XXIX, XXX	192

CHAPTER VII

DEFINITE INTEGRALS

87.	Introduction. Problem of Areas	201
88.	Connection with Inverse Differentiation	204
89.	General Definition of an Integral. Notation	205
90.	Proof of Convergence	207
91.	Properties of $\int_a^b \phi(x) dx$	210
92.	Differentiation of a Definite Integral with respect to either Limit	211
93.	Existence of an Indefinite Integral	212
94.	Rule for calculating a Definite Integral	212
95.	Cases where the function $\phi(x)$, or the limits of integration, become infinite	214
96.	Applications of the Rule of Art. 94	216
97.	Formulæ of Reduction	218
98.	Related Integrals	221
	<i>Examples</i> XXXI, XXXII, XXXIII, XXXIV, XXXV	223

CHAPTER VIII

GEOMETRICAL APPLICATIONS

99.	Definition of an Area	232
100.	Formula for an Area, in Cartesian Coordinates	233
101.	On the Sign to be attributed to an Area	235
102.	Areas referred to Polar Coordinates	237
103.	Area swept over by a Moving Line	239
104.	Theory of Amsler's Planimeter	240
105.	Volumes of Solids	242

Cambridge University Press

978-1-108-00534-0 - An Elementary Course of Infinitesimal Calculus

Horace Lamb

Table of Contents

[More information](#)

CONTENTS

xi

ART.		PAGE
106.	General expression for the Volume of any Solid	243
107.	Solids of Revolution	245
108.	Some related Cases	246
109.	Simpson's Rule	247
110.	Rectification of Curved Lines	249
111.	Generalized Formulæ	250
112.	Arcs referred to Polar Coordinates	253
113.	Areas of Surfaces of Revolution	254
114.	Approximate Integration	257
115.	Mean Values	261
116.	Mean Centres of Geometrical Figures	263
117.	Theorems of Pappus	266
118.	Multiple Integrals	269
	<i>Examples</i> XXXVI, XXXVII, XXXVIII, XXXIX, XL,	
	XLI	273

CHAPTER IX

SPECIAL CURVES

119.	Algebraic Curves with an Axis of Symmetry	284
120.	Transcendental Curves; Catenary, Tractrix	290
121.	Lissajous' Curves	292
122.	The Cycloid	294
123.	Epicycloids and Hypocycloids	297
124.	Special Cases	300
125.	Superposition of Circular Motions. Epicyclics	304
126.	Curves referred to Polar Coordinates. The Spirals	307
127.	The Limaçon, and Cardioid	309
128.	The Curves $r^n = a^n \cos n\theta$	310
129.	Tangential-Polar Equations	311
130.	Related Curves. Inversion	313
131.	Pedal Curves. Reciprocal Polars	315
132.	Bipolar Coordinates	319
	<i>Examples</i> XLII, XLIII, XLIV, XLV	322

CHAPTER X

CURVATURE

133.	Measure of Curvature	333
134.	Intrinsic Equation of a Curve	335
135.	Formulæ for the Radius of Curvature	337
136.	Newton's Method	339

ART.		PAGE
137.	Osculating Circle	342
138.	Envelopes	343
139.	General Method of finding Envelopes	344
140.	Algebraical Method	345
141.	Contact-Property of Envelopes	347
142.	Evolute	349
143.	Arc of an Evolute	353
144.	Involutes, and Parallel Curves	354
145.	Instantaneous Centre of a Moving Figure	356
146.	Application to Rolling Curves	359
147.	Curvature of a Point-Roulette	361
148.	Curvature of a Line-Roulette	363
149.	Continuous Motion of a Figure in its own Plane	364
150.	Double Generation of Epicyclics as Roulettes	365
	<i>Examples</i> XLVI, XLVII, XLVIII, XLIX	367

CHAPTER XI

DIFFERENTIAL EQUATIONS OF THE FIRST ORDER

151.	Formation of Differential Equations	381
152.	Equations of the First Order and First Degree	384
153.	Methods of Solution. One Variable absent	385
154.	Variables Separable	385
155.	Exact Equations	387
156.	Homogeneous Equation	389
157.	Linear Equation of the First Order, with Constant Coefficients	391
158.	General Linear Equation of the First Order	393
159.	Orthogonal Trajectories	395
160.	Equations of Degree higher than the First	398
161.	Clairaut's form	399
	<i>Examples</i> L, LI, LII, LIII, LIV	400

CHAPTER XII

DIFFERENTIAL EQUATIONS OF THE SECOND ORDER

162.	Equations of the Type $d^2y/dx^2=f(x)$	411
163.	Equations of the Type $d^2y/dx^2=f(y)$	412
164.	Equations involving only the First and Second Derivatives	416
165.	Equations with one Variable absent	418
166.	Linear Equation of the Second Order	420
	<i>Examples</i> LV	423

Cambridge University Press

CHAPTER XIII

LINEAR EQUATIONS WITH CONSTANT COEFFICIENTS

ART.		PAGE
167.	Equation of the Second Order. Complementary Function	428
168.	Determination of Particular Integrals	431
169.	Properties of the Operator D	435
170.	General Linear Equation with Constant Coefficients. Complementary Function	437
171.	Particular Integrals	440
172.	Homogeneous Linear Equation	443
173.	Simultaneous Differential Equations	445
	<i>Examples</i> LVI, LVII, LVIII	451

CHAPTER XIV

DIFFERENTIATION AND INTEGRATION OF POWER-SERIES

174.	Statement of the Question	457
175.	Derivation of the Logarithmic Series	458
176.	Gregory's Series	461
177.	Convergence of Power-Series	463
178.	Continuity of a Power-Series	466
179.	Differentiation of a Power-Series	467
180.	Integration of a Power-Series	468
181.	Integration of Differential Equations by Series	469
182.	Expansions by means of Differential Equations	471
	<i>Examples</i> LIX, LX, LXI	474

CHAPTER XV

TAYLOR'S THEOREM

183.	Form of the Expansion	480
184.	Particular Cases	481
185.	Proof of Maclaurin's and Taylor's Theorems. Remainder after n terms	484
186.	Another Proof	488
187.	Cauchy's form of Remainder	489
188.	Derivation of Certain Expansions	490
189.	Applications of Taylor's Theorem. Order of Contact of Curves	492
190.	Maxima and Minima	494
191.	Infinitesimal Geometry of Plane Curves	496
	<i>Examples</i> LXII, LXIII	497

Cambridge University Press

CHAPTER XVI

FUNCTIONS OF SEVERAL INDEPENDENT VARIABLES

ART.		PAGE
192.	Partial Derivatives of Various Orders	501
193.	Proof of the Commutative Property	502
194.	Extension of Taylor's Theorem	505
195.	General Term of the Expansion	506
196.	Maxima and Minima of a Function of Two Variables. Geometrical Interpretation	508
197.	Conditional Maxima and Minima	511
198.	Envelopes	513
199.	Applications of Partial Differentiation	515
200.	Differentiation of Implicit Functions	516
201.	Change of Variable	517
	<i>Examples</i> LXIV, LXV, LXVI	519

APPENDIX

NUMERICAL TABLES

A.	Squares of Numbers from 10 to 100	525
B 1.	Square-Roots of Numbers from 0 to 10, at Intervals of 0·1	525
B 2.	Square-Roots of Numbers from 10 to 100, at Intervals of 1	526
C.	Reciprocals of Numbers from 10 to 100, at Intervals of 0·1	526
D.	Circular Functions at Intervals of One-Twentieth of the Quadrant	526
E.	Exponential and Hyperbolic Functions of Numbers from 0 to 2·5, at Intervals of 0·1	527
F.	Logarithms to Base e	527
INDEX	528
