## CAMBRIDGE LIBRARY COLLECTION

*Books of enduring scholarly value*

### **Printing and Publishing History**

The interface between authors and their readers is a fascinating subject in its own right, revealing a great deal about social attitudes, technological progress, aesthetic values, fashionable interests, political positions, economic constraints, and individual personalities. This part of the Cambridge Library Collection reissues classic studies in the area of printing and publishing history that shed light on developments in typography and book design, printing and binding, the rise and fall of publishing houses and periodicals, and the roles of authors and illustrators. It documents the ebb and flow of the book trade supplying a wide range of customers with products from almanacs to novels, bibles to erotica, and poetry to statistics.

### **Progress in Printing and the Graphic Arts During the Victorian Era**

First published in 1897, this is one of many books written by the technical journalist John Southward (1840–1902), one of the most prolific writers on printing in the nineteenth century. As the title indicates, Southward is primarily concerned with the development and progress of printing. Here he takes a thoroughly practical approach, surveying the different methods of printing and considering the improvements made in printing advertisements, books and newspapers, as well as to the different stages of the printing process itself. Southward's prose clear and precise, and his style changes seamlessly from a narrative account of printing history to more instructional descriptions of printing methods. The book contains numerous illustrations and diagrams, and the pages are all lavishly decorated. This is a beautiful book, a thoroughly comprehensive account of the history and processes of printing from one of the leading nineteenth-century authorities on the subject.

Cambridge University Press has long been a pioneer in the reissuing of out-of-print titles from its own backlist, producing digital reprints of books that are still sought after by scholars and students but could not be reprinted economically using traditional technology. The Cambridge Library Collection extends this activity to a wider range of books which are still of importance to researchers and professionals, either for the source material they contain, or as landmarks in the history of their academic discipline.

Drawing from the world-renowned collections in the Cambridge University Library, and guided by the advice of experts in each subject area, Cambridge University Press is using state-of-the-art scanning machines in its own Printing House to capture the content of each book selected for inclusion. The files are processed to give a consistently clear, crisp image, and the books finished to the high quality standard for which the Press is recognised around the world. The latest print-on-demand technology ensures that the books will remain available indefinitely, and that orders for single or multiple copies can quickly be supplied.

The Cambridge Library Collection will bring back to life books of enduring scholarly value (including out-of-copyright works originally issued by other publishers) across a wide range of disciplines in the humanities and social sciences and in science and technology.
